SUMMER NUMBER.

THE MOTOR CYCLE

4D

Circulation Exceeds 120,000 Weekly. *Founded 1903.*

COVERS EVERY PHASE OF THE MOVEMENT AND CIRCULATES THROUGHOUT THE WORLD

No. 1,006 Vol. 29 **Thursday, July 6th, 1922.** **Price 4d**

The growing popularity of Royal Ruby Motor Cycles may be gauged from the fact that our Sales this season, as compared with last year's up to the corresponding period, show an increase of no less than 186 per cent.

ROYAL RUBY

We strongly advise you to get a copy of the latest illustrated catalogue of Royal Ruby Motor Cycles, including a range of solo models and lightweight combinations. Value unequalled by any firm in the trade to-day.

Catalogue free on application.

THE RUBY CYCLE CO., LTD.
162, Deansgate, Manchester. Works: Altrincham.

The

TRIUMPH

ADDS TO ITS MANY IMPORTANT SUCCESSES.

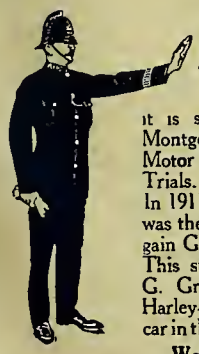
Full details of our new 3½ h.p. O.H.V. Model will be sent post free on request.

TRIUMPH CYCLE CO., Ltd., COVENTRY.
LONDON: 218 Gt. Portland Street, W. 1.
And at Leeds, Manchester and Glasgow.
Agents Everywhere.

MONTGOMERY SIDECARS

W MONTGOMERY & CO
SIDECAR SPECIALISTS
LEICESTER CAUSEWAY COVENTRY



Worth Attention.

We do not usually particularise successes of "Montgomery" Sidecars in Trials because it is so well known that for the last 20 years Montgomery Sidecars have been foremost in helping Motor Cyclists to win Gold Medals in all sorts of Trials.
In 1911 Scottish 6 Days Trials the "Montgomery" was the only sidecar to finish without breakage and gain Gold Medal.
This success was repeated at Easter last when Mr G. Grinton won the A. J. S. Trophy with his Harley-Davidson and "Montgomery" sporting sidecar in the Western M.C.C. Trial over Highland roads.

We can help YOU to win Gold Medals
Art Catalogue free on request.

Do it on an OMEGA

You can now buy a 3 h.p. Omega two-stroke from **£39 10 0** or an Omega J.A.P. from **£60**. Certainly for cheapness and comfort "do it on an Omega."

W. J. GREEN, LIMITED

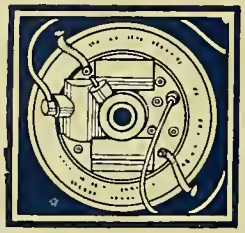
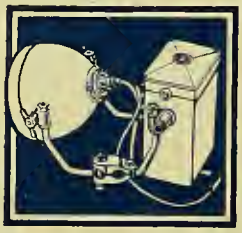
Miles ahead



Here's the wonderful little Electric Generator: gives you Bright Light at night at no expense.



Here's the Head Lamp Battery-Box: throws strong Illuminating Beam ahead, Dim when standing.

Here's the Anti-trouble Rear-light. Illuminates number-plate and shows red behind for others to see as you pass them by.

YOU'VE noticed there are three kinds of two-stroke engines. The tired—"woolley"—kind; they are very hot in one sense, but not in the way *you* want it; they move sedately but burn your trousers. There is the "crackler" which has all its power in its exhaust. And then there is that really modern engine—the Villiers.

Really the Villiers is the only two-stroke engine needing your consideration to-day. It is *miles* ahead. It has a wonderful turn of speed and a big power output. It is economical.

It is *modern*. It two-strokes steadily at all speeds. It has self-contained, self-generating electric lighting equipment. It has magneto fly-wheel, *enclosed*. It has no old-type magneto.

See that your new "bus" has a Villiers engine. In all respects it is "miles ahead."

¶ *Write for interesting descriptive Literature and List of Motor-cycle Manufacturers who fit Villiers Engines.*

Villiers TWO-STROKE

THE VILLIERS ENGINEERING Co., Ltd.,
Sunbeam Street, Wolverhampton.

with the Fly-wheel Enclosed The old-type magneto replaced & Lighting Dynamo complete

The A.C.U. Six Days Trial.

ELSEWHERE in this issue will be found a review of the regulations governing the forthcoming annual A.C.U. Six Days Reliability Trial. It will be gathered that this year's trial will not be a repetition of the last event, which, in some quarters, was regarded as altogether too easy. The suggested inclusion of such hills as Rosedale Abbey Bank and Sir William Hill is a reversion to the old policy of the A.C.U., and those who have hitherto condemned the practice of including freak hills may not be pleased. Such critics, however, should not be too hasty in drawing conclusions, for the Auto Cycle Union, in acknowledging that last year's trial was too easy, has not fallen into the mistake of making this year's test too difficult.

No Penalty for Wheel Slip.

It has already been decided that gradient is no deterrent to present-day machines, and that failure on the part of any first-class motor cycle to climb the severest hills has been due chiefly to wheel slip. The regulations this year take this into consideration by not penalising those who come to a stop through this cause, provided a restart is made without stopping the engine. Competitors may even move their mounts to one side in order to obtain a better grip.

In framing this rule we doubt not that the Competitions Committee fully appreciated that the sidecars would be at a disadvantage compared to their solo contemporaries, since it is usually the sidecars which suffer most from wheel spin. The difficulties of moving a sidecar outfit sidewise without stopping the engine are many, and we suggest that the Union, in its final regulations, take this into consideration and permit the sidecars to be guided rearwards a certain number of feet on to a more favourable patch, instead of insisting on the rule, which reads:

> " . . . shall be allowed immediately to move his machine to another part of the road, not further up or lower down the hill than the point already reached . . . "

We commend the A.C.U. for the spirit behind the rule referred to, for it shows that at last it is appreciated that it is not just to penalise a machine which may fail to climb a hill through wheel spin. If it is finally decided to include any hills which are of the "freak" type, we suggest to the Union that it abides by that decision and not change the course at the last minute.

At the Discretion of the Judges.

We are sorry to see that marks in several of the tests will be deducted at the discretion of the judges. It is exceedingly difficult to provide for all eventualities by means of a table of penalties, but it should not be impossible. In the case of the final examination, it might mean a list of practically every part of a motor cycle, and where the brake test is concerned it should be possible to arrange a definite test on Brooklands.

The silence test is another matter, and it is reasonable to suppose that whatever marks are deducted under this heading will be the subject of discontent. The utilisation of noise-recording instruments has always been regarded with suspicion by the entrants, but only because the tests have been conducted *en route* and not under conditions uniform for all machines in the trial.

The question of silence—or rather noisiness—is a very important one, and the governing body has the backing of the general public and of all thinking motor cyclists in endeavouring to encourage the development of the comparatively silent machine. Therefore everything should be done to ensure a test which shall be free from the possibility of criticism and heart burning.

An index to the advertisements in this issue will be found on the page facing the back cover.

OCCASIONAL COMMENTS

BY "IXION"

Grease that Spare Piston.

A NUMBER of club knuts nowadays keep a spare piston for spring competitions, and it is usually of aluminium alloy. Indeed, one manufacturer actually sends out his sports model engine with a cast-iron piston installed and an alloy piston in reserve for special events. Aluminium acquires a dull finish on exposure to air. This dullness is due to oxidisation, and the oxide is an abrasive, calculated to destroy the fine polish of a good cylinder wall. Nobody would dream of putting a rusty cast-iron piston into an engine, but cases occur of riders fitting a badly oxidised aluminium piston; in fact, I have seen ungreased alloy pistons in a factory store bin. Moral, keep an idle aluminium piston as thoroughly greased as if it were of cast-iron.

Converted.

YESTERDAY I made two trips over a short piece of bad road. The first trip was on my own machine, which with 3in. tyres and a front rank spring fork is reputed to be one of the most comfortable machines on the road. The second trip was on an experimental spring frame, designed by a well-known motor cycle engineer. During the last year or two I have been tempted to waver in my ancient allegiance to spring frames. I had been veering round to the conclusion that the above lay-out afforded just about as much comfort as any commercial spring frame. The two rides, however, sent me scampering back to my old conviction. Comfortable as the Triumph fast roadster unquestionably is, compared to most existing machines it had very considerably the worse of this particular comparison. I was frequently out of the saddle, and if I attempted any mild speed I had to cling on by my eyebrows and teeth. On the new spring frame I was alike unconscious—so far as physical sensation goes—both of the road surface and of the fact that there was a spring frame beneath me. I rode as evenly as if I had been sitting on an ordinary frame over dead plumb asphalt. Presently the inventor did a stunt for my benefit. He took the worst bit at speed with his arms raised over his head, and bounced violently in the saddle as he came along. This frame embodies two notable departures from ordinary spring frame practice. In the first place its springs have far more movement than any marketed type. Secondly, no rebound is possible. The nett result is the most comfortable motor cycle travel I have ever experienced. All business-like factories are well ahead with their 1923 programme, so I can hold out no great hopes that readers will be able to try out this invention next year. But by 1924 I think the public can be guaranteed their opportunity. The frame is so good that it will probably be marketed as part of some famous machine. In the meantime its principles may perhaps be embodied in accessory fittings sold to improve one or two forks in common use. More anon.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

When the Rudge Goes "Fey."

THE occasional "mad moments" developed by Rudge engines continue to excite interest, and another correspondent writes excitedly to say that he has at last persuaded his engine to a permanent frenzy. In his case the erratic behaviour had nothing to do with the inlet valve spring identified by another consultant. His carburetter jet dated back to the era before manufacturers used the flowmeter, and its delivery orifice was far, far larger than the size stamped upon it. He chanced to try another jet, and instantaneously super-rudging became habitual. I do not myself see why an excessively large jet should produce in-and-out "revving" of the type described, unless spasmodic flooding also occurred.

For Export.

AN Australian rider who has owned thirty British machines and two Americans weighs in with a lively and libellous epistle, which I dare not reproduce. He is for the home-built stuff every time, but desires me to impress our manufacturers with the folly of exporting naked chains to countries where sandy roads abound. If the front wheel churns up a trail or abrasive dust for at least ten months in the year no uncovered chain will last long. For which reason he thinks it a pity that the chain-cum-belt drive is being so freely dropped, although he is ready to be convinced that fully encased chains are in theory practicable.

A Horrid Rumour.

TO the effect that in this year's A.C.U. Six Days every solo machine will carry an official A.C.U. observer, complete with notebook, audiometer, vibratograph, etc., *on the carrier*. Standard weight of said observers 13 stone. Any featherweight observers to carry shot in their pockets. On the best authority I beg to inform the public that this is a mere canard.

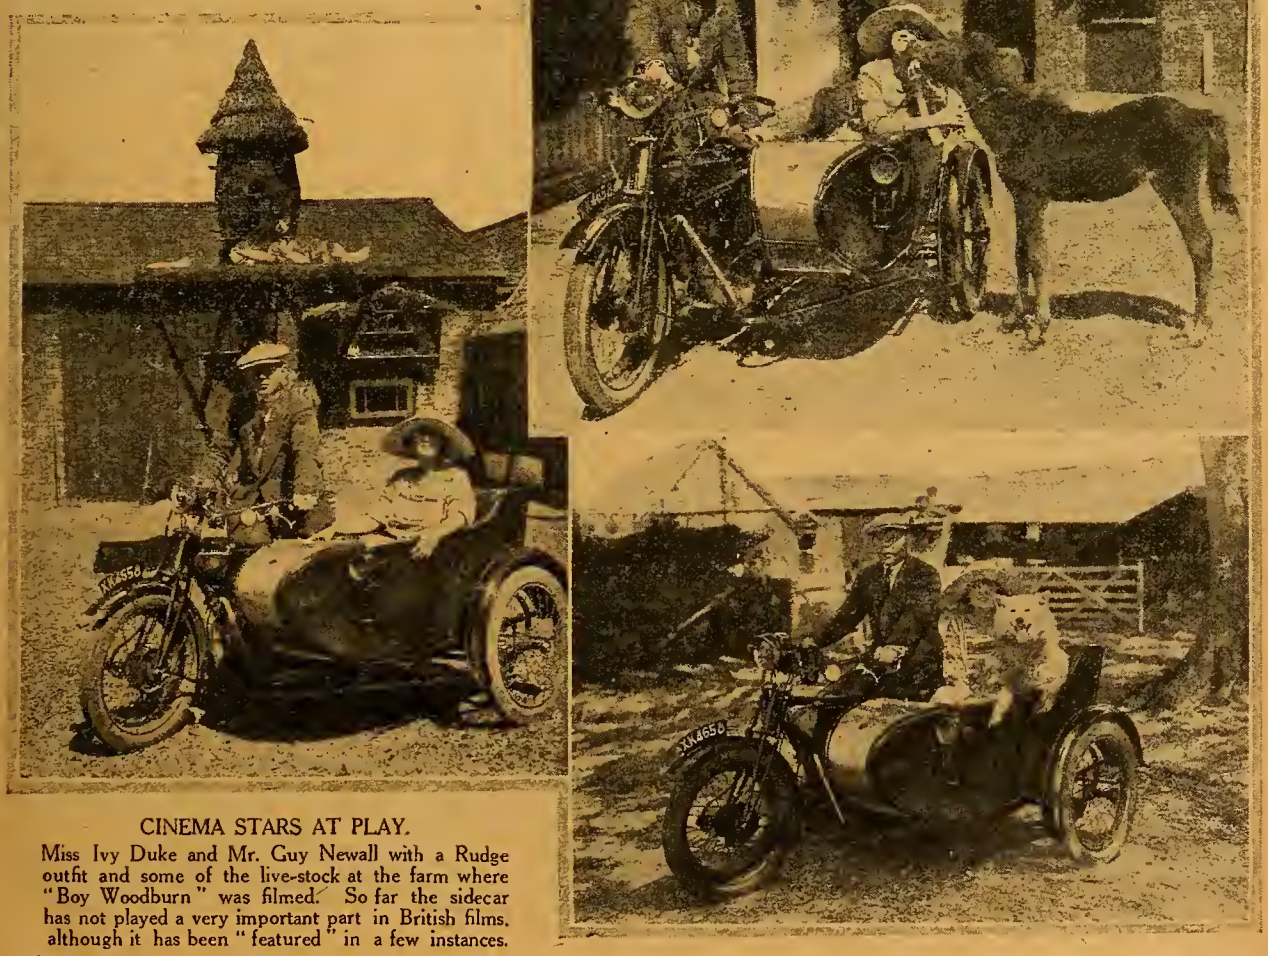
Occasional Comments.—

If it were Nearer!!!

THIS paragraph is intended to turn all organisers of freak trials green with envy. There lies before me a letter from a varlet who exported a G.N. to Australia to his great gratification. In the Benalla district of Victoria there is a location known as Gluepot Country. It consists of 35 miles of white clay melon hole swamp. A "melon hole" is a circular depression varying from 6ft. to 15ft. in diameter, and from 8in. to 2ft. in depth. The melon holes are irregularly disposed, with corresponding mounds interspersed. In dry weather the going is merely bumpy. The "road" consists of a fenced-off strip of melon-hole area, ten chains wide, over which carts zig-zag to pick out the line of least resistance. After a few inches of rain—3in. of rain, *i.e.*, 300 tons per acre is a mere refreshing shower in those latitudes—the entire area becomes submerged except for trees and fencing. Melon holes and mounds are levelled by a flood resembling dirty milk, through which the intrepid motor cyclist ploughs like a destroyer with "a bone in her teeth." The G.N. tackles this area quite merrily, though the average pace may sink as low as 2 m.p.h. Happy thought; why shouldn't the A.C.U. hold a colonial trial in the colonies? Some vexed questions might then be answered.

The Tapley Gradometer.

A YEAR has elapsed since I first fitted one of Mr. Tapley's gradometers to my motor cycle, and during that time it proved a never-failing source of interest on strange and uncharted roads. Tested against surveys, it has always proved accurate, and it provides certain information which a survey does not. Not being a surveyor, I am ignorant how these gentry lay off a twisty hill like Inverfarigaig Corkscrew; I imagine they take the total rise between two datum points. Anyhow, when we come to a hairpin of some acuteness, we know the grade on the inside of the elbow is often twice as stiff as that on the long sweep round. The Tapley measures this for you. My instrument has never given me any trouble, and was always steady, provided the machine could be driven at an even pace, devoid of marked ac- and de-celerations, though a sudden throttle opening made it as merry as a grig for the moment. (By the way, what *is* a "grig"?) But the inventor has recently had another brain wave, and nothing would please him but to have it back and bring it up to date, so that now it is even steadier.



CINEMA STARS AT PLAY.

Miss Ivy Duke and Mr. Guy Newall with a Rudge outfit and some of the live-stock at the farm where "Boy Woodburn" was filmed. So far the sidecar has not played a very important part in British films, although it has been "featured" in a few instances.

WHERE TO TOUR

A Brief Survey of the Touring Grounds of Great Britain.

ONLY the motor cyclist who has spent many holidays on tour fully appreciates what Great Britain offers to those who will seek its beauties. In these pages the many touring grounds are briefly reviewed by members of *The Motor Cycle* staff, who are familiar with them.

Naturally, only an outline of the attractions of each district is possible, but this article should serve as a guide to all who are undecided as to the touring ground to explore.

NEAR MENAI BRIDGE ANGLESEY

BALLIG BRIDGE GLEN HELEN I.O.M.

THE WYE VALLEY.

Nowhere in the British Isles is there a parallel to the Wye Valley. The writer knows of only one district reminiscent of it, and that is the Niagara Gorge in America. Considering the really wonderful scenery available between Monmouth and Chepstow, and also its comparative nearness to the populous districts of mid-England, it is surprising that so few have "made the trip." It is impossible to describe it, just as it is impossible for the camera adequately to convey its beauty. It is remarkable, too, for the waters of millions of years have worn a deep gorge which so winds about that at Simons Yat it is possible to stand on a point of land and see the river hundreds of feet below, before and behind one and at one's side. If America had the Wye Valley, it would be as world famous as the Niagara Gorge.

INEXHAUSTIBLE NORTH WALES.

It has been said that a dozen holiday tours cannot exhaust North Wales. Certainly one should not hurry, for once west of Llandudno, Llangollen, Welshpool, or Newtown, every mile contains more than can be seen at 20 m.p.h.

Wales has several gateways, and the one which is most frequented—Chester—as charming as it is, is perhaps the least attractive. Llangollen is the proper front door to North Wales, and the stranger who wishes to make a reconnoitring tour in order to find its best districts can do no better than follow a route starting at Llangollen and including Corwen, Pentre Voelas, Bettwys-y-Coed, Llanrwst, Conway, along the coast road to Bangor (from where a side trip to Beaumaris in Anglesey can be taken), inland

Where to Tour.—
again *via* Bethesda to Capel Curig, Pen-y-gwrhyd, down the Pass of Llanberis to Carnarvon.

From this ancient town the comparatively little known peninsular of Carnarvon should be explored by taking the coast road to Llanaelhaiarn (near which is the now famous Screw Hill "discovered" by *The Motor Cycle* a year ago), on to Nevin and Aberdaron, where one may climb up on the moorland on the end of the land and look down upon Bardsey Island. From Aberdaron, the southern route should be taken through Abersoch, a peaceful little place miles away from railway stations and the world in general, then on to Pwllheli, Criccieth, and Tremadoc.

A Beautiful Pass.

From Tremadoc no one should miss the run up the beautiful Pass of Aberglaslyn to Beddgelert, which road, if continued, will bring the tourist again to Pen-y-gwrhyd, whence one may turn south again *via* Bettwys-y-Coed, Ffestiniog, Harlech, Barmouth, and Dolgelly, at which quaint old town the motor cyclist has the choice of three roads, the first leading him to Bala and back to Corwen, the second to Dinas Mawddwy and Welshpool, and the third round the coast to Aberystwyth.

Further south than Aberystwyth along the coast the motor cyclist need not trouble to go. If he wisbes to explore more of Wales, let him take the trip from the last mentioned resort across the hills *via* Devil's Bridge to Rhayader, New Radnor, and Leominster, or, having crossed the hills, turn off at Llangunig, and thence proceed *via* Llanidloes to Newtown.

If it is the peace of central Wales he wants, south of Rhayader lies Builth and the Valley of the Wye. Should he have become bored with main road, there is Bwlch-y-Groes between Dinas Mawddwy and Lake Bala, and, a little to the east of the famous test hill, there is Lake Vyrnwry.

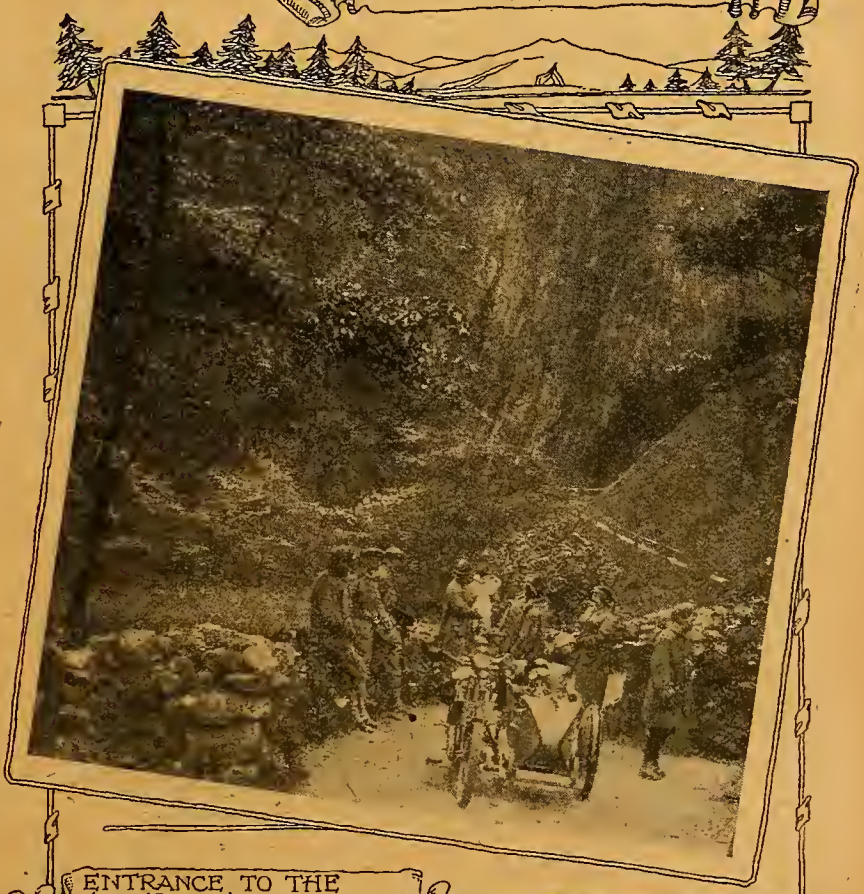
Yes, it is impossible to exhaust North Wales, for when one has covered it all, it is time to begin again.

THE EAST COAST.

The outstanding characteristics of the East Coast are, of course, its flat roads and its magnificent stretches of sand. But flat roads and sand alone are not sufficient to lure the motor cyclist from such beautiful hunting grounds as North Wales, the West Country, or the Lakes, should, of course, the choice of such centres be open to him. Norfolk, Lincoln, and Yorkshire, however, offer more than is realised by those who have not frequented these counties, and a tour, say, from Yarmouth to Whitby can be full to the brim with interest.

Lowestoft serves well as a starting point. From that town one can make it a leisurely jaunt or fast run, just as it suits him. After sipping the delights that Lowestoft and Yarmouth offer, Cromer may be visited. The road to this delightful little resort is lovely in its quaint East Anglian way; and so is the journey through poppyland from Cromer

FISHGUARD, OLD HARBOUR WALES



ENTRANCE TO THE CAVERN, NEAR CASTLETON PEAK DISTRICT

IN THE DUKERIES NOTTINGHAMSHIRE

IN A WARWICKSHIRE VILLAGE.—STONELEIGH

to Wells and Hunstanton. Sidecaring from Hunstanton, through Sandringham, and King's Lynn to Boston, can, under certain conditions, be ideal; it can also be a terrible business in the winter. But the road is worth taking for it has character and distinction. Boston, that quaint seaport dominated by a magnificent church which overlooks miles of fen country, should not be missed. To get a real taste of a typical Lincolnshire coast road, the route through Wainfleet to Skegness should be taken; having traversed this road the journey will not be forgotten. Skegness—so bracing—may form a stopping place for the night before going inland to Spilsby, Louth, and Grimsby. Whilst at Grimsby it is worth the effort to see the landing of the fish at dawn, and Immingham Docks are, too, worth a visit. If there is no desire for this kind of education at Grimsby, take the inland road to New Holland, where the ferry may be taken to Hull.

A Rocky Coast.

From Hull a fast run can be made through Beverley and Great Driffield to Bridlington, where a new type of coastal scenery begins. The charms of this seaside resort are fully known, and whether a prolonged stay is made here or at Scarborough, a few miles further north, one will be compensated. A visit should be made to the great promontory, Flamborough Head, and on no account should Filey Brig be missed. Leave the machine in the town, take a boat across the bay, and land on that curious rocky projection over which magnificent seas are nearly always running.

Scarborough is only five miles away, and the "Queen of the North" is a very apt title for this northerly watering place. Its situation is fine, the district lovely and diverse in its appeal; there are diamonds and rubies on the Spa, where mint rock and paper bags are taboo; there is an old castle, the rocky coast, and Hayburn Wyke—a little Paradise.

Up to now not a word about the machine has been mentioned, for any old 'bus can traverse thus far, or at least as far as Bridlington. Onwards from Bridlington to Filey, Scarborough and Whitby (the latter place must be included), greater care in driving will have to be exercised, there are hills, but nothing formidable. Whitby, where the coast route may end, is a quaint resort, and a paradise for artists and lovers of the old world, and there is a fashionable quarter, very attractive too, and very remote from the harbour end of the town. From Whitby it is an easy matter to reach Thirsk on the Great North Road, *viâ* Pickering and Helmsley. If this circular route has not absorbed all the days available, a run across the dales of Yorkshire to the lakes would give variety, or an alternative run would be to embrace the Derbyshire Dales on the way back to the south, if southward be the way home.

DERBYSHIRE DALES AND THE "DUKERIES."

Derbyshire's greatest lack, from a tourist's point of view, is imposing sheets of water. That is probably one reason why the county is not so fully explored

Where to Tour.—
as it might be by motor cyclists from the south. The area of the Peak District is compact, the roads are well graded, and the scenery varied. In fact, this diversity of landscape, beautiful even without the aid of lakes, is one of its chief attractions. Derbyshire is centrally situated, accommodation is easily obtained at such resorts as Buxton and Matlock, or at the numerous farmhouses to be found in the lovely dales. So easy of access are the beauty spots that even in one day much of it can be seen if a proper route be selected. Wild, rugged, and forbidding solitudes abound in the neighbourhood of Snake Inn and Allport Moor, which is near to the highest point of the Pennine Range. Yet round about Matlock, Bakewell, Baslow, Ashford, Tideswell, and Buxton there are dales which for sheer beauty and distinctiveness cannot be excelled anywhere. The ease with which attractive rides can be planned makes it almost superfluous to detail a route, but the following circular tour briefly detailed will serve for anyone wishing to enjoy some of the best scenery in one day.

Buxton, Tideswell, Ashford (*Monsal Dale*), Bakewell (*Hadden Hall*), Rowsley, Matlock, Kelstedge, Red Lion Inn, Baslow, Calver, Fox House Inn, Hathersage, Bamford, Ashopton, Allport Moor, Glossop, Hayfield, Chinley Head, Chapel-en-le-Frith, Dove Holes, Buxton (70 miles). If Derbyshire be approached from the north, east, or south, one would be well repaid by a visit to the "Dukeries," which are easily reached from Nottingham, Doncaster, or Newark.

It is a small district of rare beauty, with a character quite its own. Ollerton and Tuxford are good centres from which to reach this historic ground which Robin Hood, Friar Tuck, and Little John made famous. From Ollerton it is but a short run to Matlock, which makes an excellent centre for full exploration of the Derbyshire Dales.

THE WEST COUNTRY.

So far as the majority of motor cyclists is concerned, the West Country is that part of England between Bristol and Lynmouth. Quite a number of motor cyclists hurry through this section in order to reach places further afield, which is quite a mistake, and the tourist intending to "do" Devon and Cornwall should reserve time to visit the Cheddar Caves, and Gorge and Wells, to try Porlock, and to see Exmoor.

Bristol is well worth a day of any tourist's time. Not only has the city many interesting buildings and historic associations, but Clifton has attractions quite unique which stand out in the memory of the wayfarer.

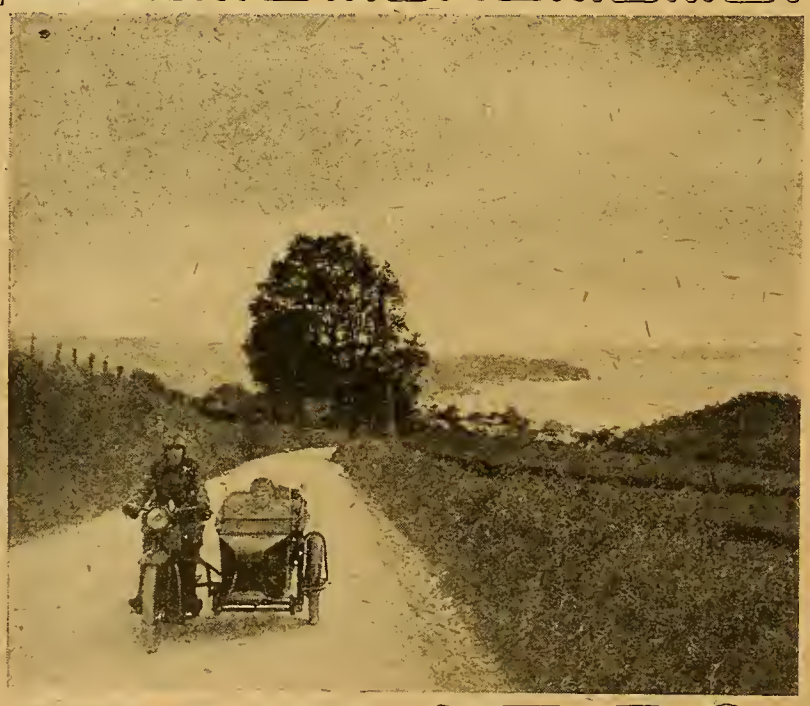
YORKSHIRE.

Yorkshire! Who can point to any one corner of the broad-acred county as the spot most fitted to represent its charms? In its boundaries the county possesses scenery of almost every description to be found in Great Britain; true the hill contours only occasionally assume a

ROBIN HOODS BAY
YORKSHIRE COAST

COWDALE
DERBYSHIRE

LYNMOUTH



BETWEEN TEIGNMOUTH & TORQUAY SOUTH DEVON

craggy outline, but there are high altitudes; wild, desolate uplands, moorland lakes and tarns, rugged valleys, fertile plains, mountain streams and placid rivers, sandy *littoral* and rocky coast.

With all these varieties of scenery there is little need to cross the Yorkshire borders, whatever type of country is wanted. Hill-climbing and the exploration of seldom-visited moorland byways can be had in the West Riding Dales (Wharfedale, Airedale, Wensleydale, Nidderdale, and the rest), easily accessible from Leeds or Bradford, and there are the inland resorts of Ilkley, Harrogate, or Knaresborough, all near "the dales." To the lover of wide, rolling pastoral lands, the central plain of York has its slow-moving rivers verging towards the Ouse; there are antiquities and historical associations innumerable, with stately cathedrals at York, Ripon, and Beverley. Facing eastward are Whitby, Scarborough, Bridlington, and Filey—incomparable coast resorts—and the artist-colonised fishing villages of Staithes and Runswick Bay. In the north-east are the Wolds, a moorland plateau fascinating to the lover of the wild life of the woods and dells.

A Powerful Machine Needed.

Motor cycles are immensely popular in Yorkshire, and ample garage facilities are available everywhere. Except on the central plain, a sturdy, powerful, and suitably geared mount is needed, for to the west and to the north-east single-figure main road gradients abound.

Probably the best way to "see Yorkshire" in a holiday tour is to commence, say, from Wetherby, on the North Road, proceed up Wharfedale to Otley, Ilkley, Bolton Abbey (*ruins, woodlands, etc.*), Grassington, Kettlewell (*near Park Rash, the famous freak hill*), Buckden, Cray Ghyll, and Kidstone Pass (*wild moorlands*), into Wensleydale. Here are Aysgarth (*falls*), Jervaulx (*abbey*), Masham, Ripon (*cathedral and Studley Royal park*). Crossing *viâ* Swaledale, eastwards to Thirsk, the Plain of York is crossed, and then up Sutton Bank to Helmsley. Pickering (*old market town*) marks the beginning of a wonderful twenty-mile run over moorland to Whitby; coast road to Scarborough, then inland *viâ* Staxton, Malton, York (*cathedral, ancient walled city, etc.*), Harrogate and Knaresborough (*inland spas*), and so back to Wetherby.

THE HIGHLANDS.

The average motor cyclist has not yet "discovered" Scotland, and even the Lowlanders of that country are inclined to confine their riding to the well-worn tracks in their own immediate vicinity. From this it will be inferred that the glories of the real Scotland are in the North—as, indeed, they are.

It is a wonderful country, scenically. But nine-tenths of the too-small number of motor cyclists who visit it at all depart after a few fragmentary glimpses on the borders of its inner paradise of beauty. There is, of course, some excuse for them. Suppose they are going north, with Inverness as their tentative destination. They meet in the neighbourhood of Moffat

Where to Tour.—
scenery which in any other country would be regarded as almost unrivalled for its magnificence; then, by way of Perth, they enter the Highlands at Dunkeld, through wooded hills flanked by mountains even grander, and passing world-famous Pitlochry and Blair Athol they cross the Grampians by a road like nothing they have seen before, enjoying an ever-changing vista of mountain, loch, and stream which seems to make hitherto unbelievable paintings come true.

At Inverness it is decided that Scotland can hold nothing finer than the area they have just traversed. Some return by the same route; others, more venturesome, follow the Caledonian Canal—less canal than loch—and reaching Oban marvel at the infinite variety of the west coast; or, it may be, they go by Deeside and Aberdeen, romantic enough in all truth. In no case, fine as their tours have been, have they seen the real Scotland.

The North West Coast.

North of the Caledonian Canal and west of Inverness is the land where the zenith of scenic grandeur is reached. Gruinard Bay, Kyle of Lochalsh, Applecross, Loch Maree, Gairloch—what visions of majestic loveliness these names conjure up in the minds of those who have seen them! The pen fails one, and even the brush in a master's hand cannot exaggerate when attempting to portray a West Highland scene. Usually the artist fails as lamentably as the writer.

True, this locality is inaccessible, but the motor cyclist will find the trip well worth its difficulties, which are less to him than to almost any other traveller. There are no railways and few towns, but it may comfort him to know that the roads carry a regular service of Fords, and what a Ford can do——!

One must not forget, however, the other historic touring grounds of the country across the Tweed—perhaps less deserving of attention because they are better known—the Border towns and the Tweed itself, Loch Lomond and the Trossachs and the south-western corner and parts of Ayrshire Scotland is a country to which one can go again and again, and always find something new.

MID ENGLAND.

Those who admire park-like beauty can find such scenery in the Midland counties to their heart's content. Throughout this part of the world the smoke and grime of the big manufacturing towns are relieved by wonderful trees and rural scenery within a few minutes' ride of the busiest centres. Even the eighteen miles between such active industrial towns as Birmingham and Coventry is not devoid of actual beauty, and what could be more charming than a trip through the Cotswold Hills, with their quaint old-world villages nestling amongst the fruit-producing valleys. In the spring time the Vale of Evesham draws thousands of visitors for a sight of the orchards in bloom, and throughout the year the surrounding country is always beautiful. Those who prefer spacious views to pastoral sur-

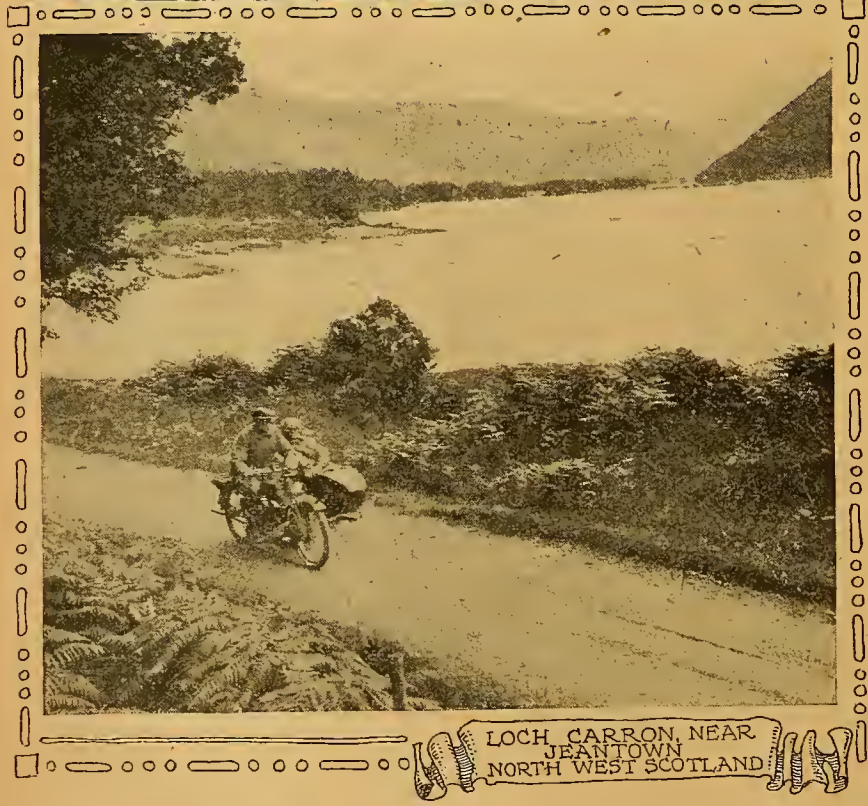
CONISTON WATER LAKE DISTRICT

MAMRATACHAN, NEAR INVERNESS SCOTLAND



LOCH CARRON, NEAR JEANTOWN NORTH WEST SCOTLAND

roundings should visit the Cheltenham and Malvern districts, where from the tops of the neighbouring hills it is possible to obtain wonderful panoramic views of many counties. The roads on the whole are good, but it is amongst the lanes and by-roads that the most beautiful scenery is to be found. Anyone who has the time to wander amongst the Warwickshire lanes should not miss such an opportunity. One can hardly find a side road that is without some fresh attraction, and though, as might be expected, these lanes are twisty and require careful driving, the surfaces are usually remarkably good. The whole of the Midlands is full of historical interest, and such names as Edge Hill, Stratford-on-Avon, Kenilworth, Warwick, and many others, are attractions not only for their historical associations, but also for their beautiful surroundings. Perhaps the one feature which is lacking to make perfect much of the Midland scenery, is running water or a river of magnitude, but even this need is partly filled by small but beautiful lakes dotted about the numerous parks, while the Northern Midlands cannot be accused of lack of streams. There are some who consider that the Midlands are chiefly composed of mines and manufacturing towns, but the tourist in search of beauty should not be deterred by such imaginings. True it is that there are blots in the scenery in certain parts, but even the most thickly populated centres have the great advantage of being surrounded by most beautiful country.

SURREY.

Some have said that the Londoner's fate is a life 'midst smoke and traffic. Maybe! He has, however, if in the possession of a motor cycle, the choice of some of the most charming trips in the country.

An hour and a half's ride from Town, a pleasant jaunt to the vicinity of Shere, an antiquated little village nestling within the closely wooded hills skirting the famous Newlands Corner, provides an ideal afternoon's run.

The Embankment route, *viâ* Putney Bridge and Wimbledon Common, is probably the most advantageous way, since the only portion of the journey which is harassed by tramways is a mere 300 yards in Putney.

Quitting this latter place, the Portsmouth road *viâ* Kingston and Esher is, from the latter village, bordered by a rich fringe of trees.

Motor cyclists rendezvous.

Cobham, a village close to the famous Brooklands racing track, forms a centre from which many pleasant runs may be taken. An open throttle may be tried down the Fairmile stretch of tarred road *en route* for the motorists' *rendezvous*—the Wisley Hut. Here a small lake, reflecting the border willows hugging its banks, provides a shady and peaceful spot for a halt. Following a left fork a mile further on one sees the distant hills of pale purple contrasting with the green meadows of Clandon, whilst another view enchants by its picturesque cottage gardens focussed by a frame of dark woods in the background.

Where to Tour.—

The steep ascent to Newlands Corner brings reward to the heated engine at the summit, for here a halt is imperative. A miniature mountain land meets the eye. For miles the country is outspread like a relief map, whilst in colour an artist's inspiration. Many pictures have recorded this magnificent view. Below is located the village of Shere.

If equipped with a low gear ratio a small detour through the pine woods, entered from a fork road at the notorious Silent Pool in Shere, is well rewarded. Here is a region unspoilt by cultivation.

Many routes may be taken from Shere, all of which have their particular charm. Due west, narrow leafy lanes wind an irregular course *viâ* Albury and Shalford, to the old-fashioned town of Guildford, with its famous High Street, whilst further south, following the Godalming road, a circular tour *viâ* Horsham and the Dorking road embraces both highland and lowland. From Dorking a visit to Reigate and Redhill and thence along the top of the Westerham hills, gives a great variety of views.

Should one wish to explore the byways in this district many hills frequently used in official motor cycle trials would be encountered. East of Westerham, in the vicinity of Brasted and on the way to Sevenoaks, the range of hills lying south of the main road contains gradients of note. Tunbridge Wells, famous for its springs and curious rock formations on the Downs, should not be missed.

THE DUCHY OF CORNWALL.

The writer has not many favourable impressions of Cornwall as a touring ground, but it has sufficient charms to draw one, irrespective of its distance from the more populous districts. Looe, Fowey, Falmouth, Helston, Marazion, Penzance, St. Ives, Newquay, Padstow and Bude are all worth visiting. Those interested in the romance of the old smugglers will find material for their imagination in such places as Mullion and St. Ives. The fact that so many artists have used Cornwall for a background is sufficient guarantee that the amateur photographer will be rewarded for the trouble of taking his camera.

DARTMOOR AND SOUTH DEVON.

So famous is North Devon as a touring ground that very often the southern coast of this charming country is overlooked. Totally different in many respects from the resorts on the north coast, those facing the English Channel are well worth devoting a vacation for their exploration. Torquay is an excellent centre, but there are many who think that this famous watering place too "towny." For such tourists there are more restful places such as Paignton, Babbacombe, and Teignmouth.

Like Cornwall, the best of South Devon is on the edge as it were, that is, if we except Dartmoor, which provides a touring ground of its own, but nevertheless, one which no motor cyclist visiting the south coast should fail to see.

Taken on the whole, however, the roads to and from important points on the coast are monotonous, chiefly on account of the high hedges which line them. From Teignmouth and Shaldon, to within a mile or so of Torquay, there is an excellent coast road providing some splendid views, but on the main roads there is little to be seen excepting the dust of char-a-bancs.

On Dartmoor, however, totally different kinds of roads are found. Here there are no hedges to shut out the views and the vistas to be obtained on the moors are ample compensation for the low gear work necessary to reach them.

On the south coast, in addition to the places mentioned, there are Dartmouth, Kingswear, Brixham, Salcombe, and Plymouth, all offering a variety of interest unlike anything to be found at any other part of the coast, while Exmouth, Sidmouth, and Lyme Regis, eastward of Exeter, should not be missed.

THE COAST OF NORTH DEVON.

The north coast of Devon is so well known, by name at least, that it seems superfluous to mention this beautiful part of Western England. From the north east the first place of interest on the North Devon coast is Lynmouth, with Lynton at the top of the famous hill of the same name, and which has been made famous to motor cyclists by the London-Lands End trials. From Lynmouth to Lynton, also, is another longer road passing through the beautiful Watersmeet Valley, while further on the coast is the desolate Valley of the Rocks. Ilfracombe is well known as a resort, and a little further on there is Clovelly—one of the beauty spots of England made famous by picture postcards and calendar artists.

Needless to say, any motor cyclist visiting this part of the country needs plenty of power, and, what is more important, really efficient brakes.

LAKELAND AND NORTH LANCASHIRE.

No series of touring articles would be complete without some reference to the Lake Country of Cumberland, Westmorland, and North Lancashire, but so frequently has the district been dealt with in *The Motor Cycle*, both as a touring ground and as the scene of trials, that on this occasion only a passing reference will be made.

Although so hilly, the roads of the Lake District are mostly well-graded, and a medium powered machine with average gear ratios will allow most of the Lakeland area to be covered.

Those who have ever spent a holiday amid the Cumbrian mountains will feel the call to return; should they do so they should devote some time to the exploration of the lesser-known southern portion of the district, and on the northward journey detour into the uplands of North-East Lancashire. Following the Pennines up from Bolton and Preston, some fine moorland scenery is available.

PILLION RIDING AGAIN.

OUR attention has been called to a recent case at Denis Sheriff Court where a motor cyclist was fined £3 for having his rear number plate obscured whilst carrying a lady passenger whose dress hid the plate. The presiding Sheriff surely imposed an unnecessarily heavy fine for an offence of this character. It is not a legal offence to take a passenger on the carrier, and it seems hardly just that the Sheriff should impose a fine of £3 because in his opinion "it is a dangerous practice and one not to be encouraged by a lenient sentence."

There is no doubt a great deal of prejudice on the part of the non-motoring public concerning pillion riding, and as an example it may be cited that most insurance companies charge 50 per cent. extra when a solo machine is used with a pillion. At least one firm manufacturing pillion seats—the Tan-Sad works—has sufficient confidence in the safety of pillion riding, when proper equipment is provided, to issue a special policy for those fitting Tan-Sad seats and no extra charge is made for the privilege.

There is no lack of evidence to show that riders, who as a habit carry an extra passenger, are convinced that there is no danger in the practice, and a view often expressed is that greater care is exercised when a machine is used for pillion riding.

It would be interesting if insurance companies would issue a statement as to the number of accidents reported to their claims departments which have been due to the presence of a pillion passenger, and whether a proper pillion seat has been provided. We think that it would be found that in the great majority of cases in which a pillion rider is involved no provision has been made for the passenger's comfort. Riders who accommodate occasional and inexperienced companions merely by means of an unsecured cushion or a coat are in the minority, but it is due to them that pillion riding is regarded in some quarters as dangerous.

Runabout and Sidecar

Passages on the evergreen subject of Weather Protection and Comfort of Sidecars as compared with the cheap Runabout.

NOT because I was tired of the sidecar did I turn to the three-wheeler, and it was not because the three-wheeler was found unsatisfactory that a sidecar has once again been purchased. I wanted, for one thing, to find out if the three-wheeler possessed all the merits that are claimed on its behalf, and I have now definite opinions on its various advantages and drawbacks which prolonged ownership only can form.

To every sidecarist who has used an outfit for very many years there comes a period when he is attacked by *comfortitis*—a dread disease that must run its course. I was caught badly after a fortnight's sidecaring in Wales, where it rained every day, and where cold, icy winds caught and buffetted one on the passes. So I ordered a Morgan straightaway, hoping that the De Luxe model body would be bigger than the measurements. It wasn't. The boy was bigger than his measurements—most boys are in a car. So was I, and so was the passenger-in-chief. But we managed, with the aid of an auxiliary seat, to pack ourselves into the body very well.

And that first ride—how it rained—as if to demonstrate the absolute and irrefutable superiority of the little three-wheeler over our previous outfit—the rain poured in torrents for two solid hours.

"Never again the sidecar," quoth I, watching the water dance on the bonnet.

"Do mind my foot, Jacky," said the passenger-in-chief to the boy as he grazed his mother's ankle.

Then the conversation proceeded on lines more or less motorish. First the question of space, then the question of the driver's comfort.

Riding in a Vehicle.

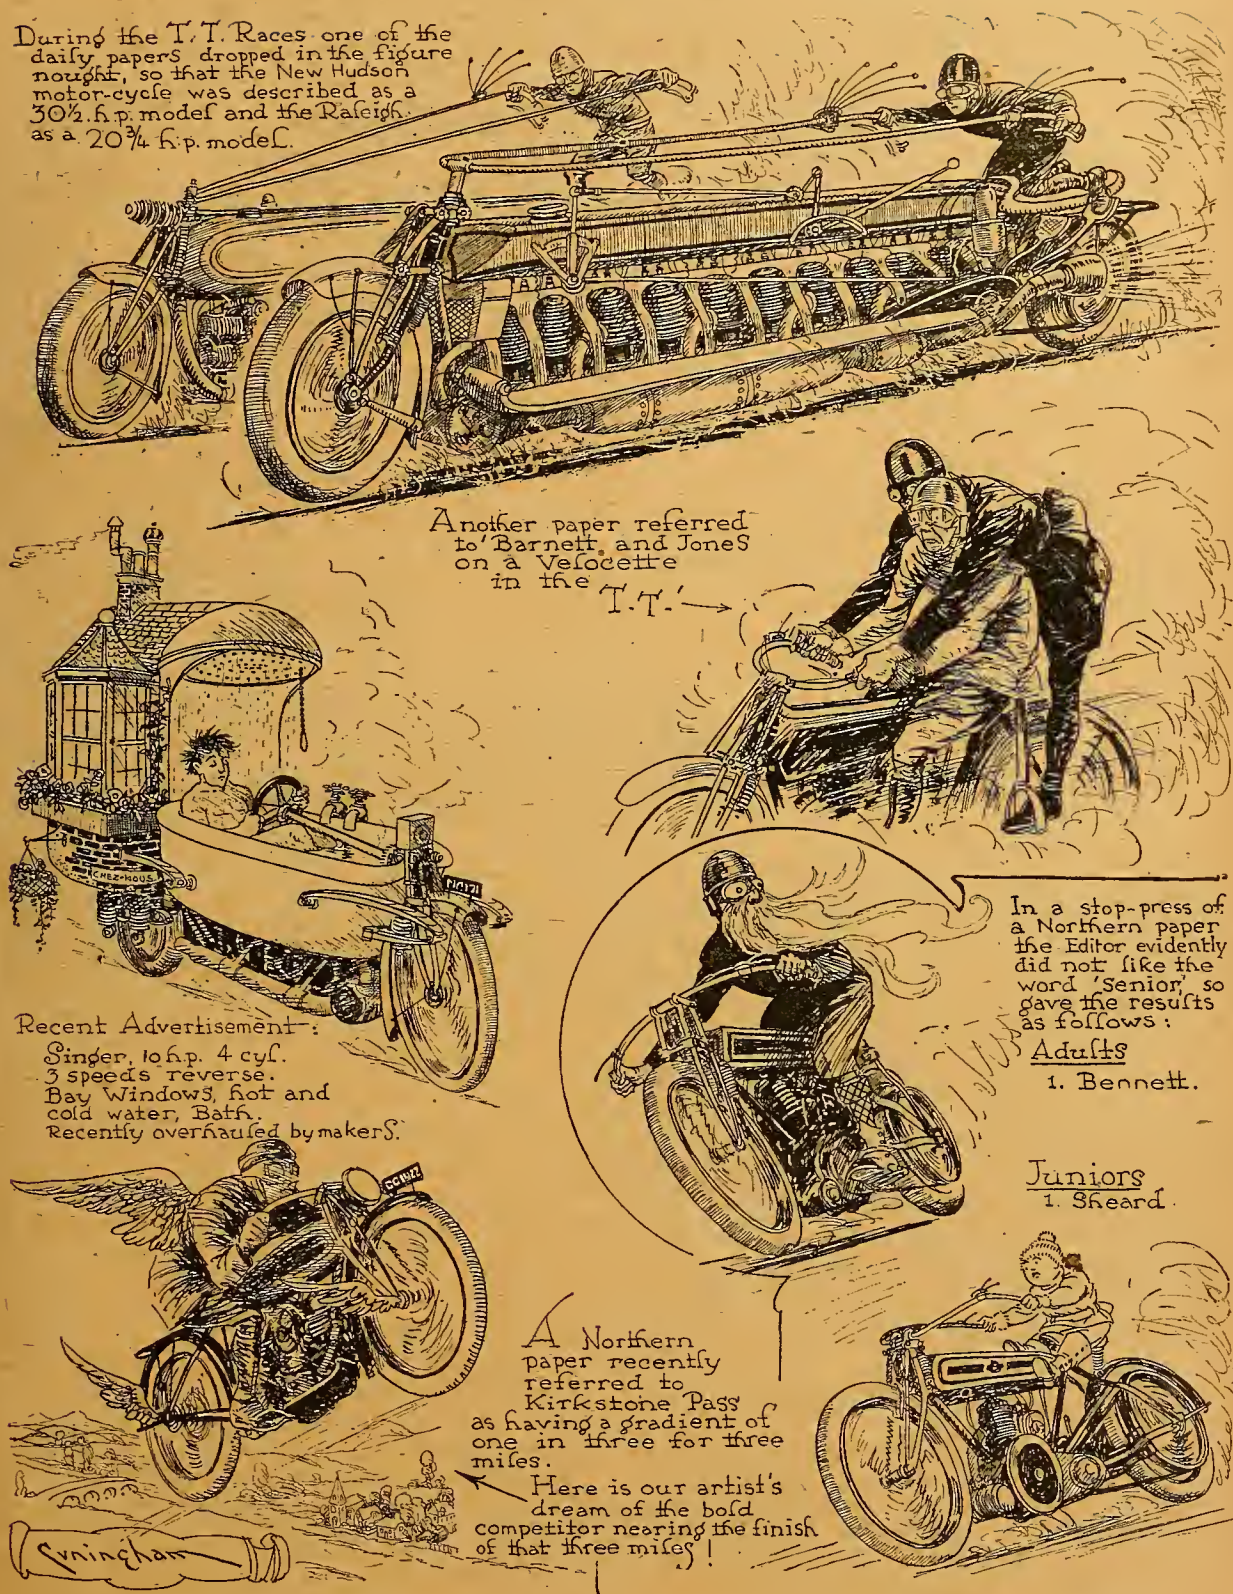
After the novelty of riding "in" instead of "on" a vehicle had worn off, other considerations made themselves manifest. For 500 miles the rear tyre, on which my eye was always focussed, played its part valiantly, then suddenly gave me taste of what I knew sooner or later I had to eat. But I can honestly say a puncture on a three-wheeler is no more trouble than on a sidecar, probably less, neither was I troubled with more punctures than I had been on my sidecars. Many miles of driving in every kind of weather convinced me that the three-wheeler possessed nearly all the merits that are claimed for it, and very few of the faults that detractors occasionally attribute to the machine. I found little difference in the mechanical wear and tear than in a powerful sidecar; the high-speed chain naturally does not last like the encased chains of a motor cycle, but both high- and low-speed chains are good for many thousands of miles. The controllability of the Morgan, and, in fact, all the three-wheelers I have handled, is good, but years of sidecaring have naturally produced a greater feeling of security when handling an outfit than when driving either four- or three-wheelers.

Pros and Cons.

To name three features I do not care about on the runabout: the starting arrangement, although excellent and efficient, is not comparable with the kick starter; the awkwardness of turning in a limited area—the sidecar is unquestionably more handy than any other motor vehicle on the road—that cannot be questioned; the use of a two-speed gear also seemed very strange after prolonged use of three speeds, especially on *long* gradients only just too steep for top gear. But in spite of all this and *plus* even the bogey of a skidding rear wheel—for it is only a bogey, though you do feel the rear wheel skid slightly—in spite of these little idiosyncrasies, the three-wheeler is a desirable little machine, and if I could afford it I would run both a sidecar and three-wheeler. But as I cannot do so I prefer the sidecar, because the problem of the extra passenger is so easily solved. As I write, the sun shines brilliantly; perhaps when the north-west wind blows rain, and the boy is at school, I'll sing another tale, for it cannot be denied that the runabout possesses attributes the sidecar can never hope to own; but then the sidecar, too, has attractions quite distinctive and peculiar to itself. No! when compared, there is no *better*.

A. F. J.

A BURLESQUE ON MOTOR CYCLES.



During the T.T. Races one of the daily papers dropped in the figure nought, so that the New Hudson motor-cycle was described as a 30½ h.p. model and the Raleigh as a 20¾ h.p. model.
Another paper referred to Barnett and Jones on a Velocette in the T.T.
Recent Advertisement:
Singer, 10 h.p. 4 cyl.
3 speeds reverse.
Bay Windows, hot and cold water, Bath.
Recently overhauled by makers.
In a stop-press of a Northern paper the Editor evidently did not like the word 'Senior,' so gave the results as follows:
Adults
1. Bennett.
Juniors
1. Sheard.
A Northern paper recently referred to Kirkstone Pass as having a gradient of one in three for three miles.
Here is our artist's dream of the bold competitor nearing the finish of that three miles!
Cuningham

Amusing mistakes are often made by those who are not conversant with the technicalities of motor cycling.

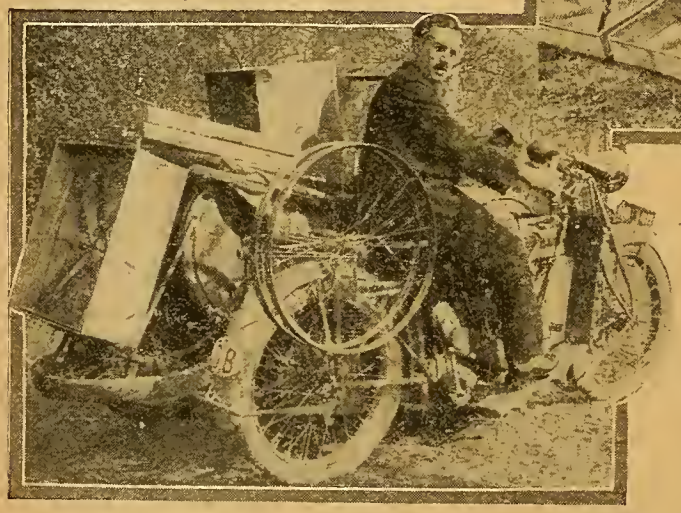
A PORTABLE FILM FACTORY.

How a Kinema Photographer Utilises a Sidecar Outfit for his Work in all Parts of the Country.

FROM time to time the motor cycle and sidecar has been set to perform most unusual work to satisfy its owner's whims and fancies, but never before has it been employed as a medium for the transport of a "film factory." The outfit used for this work was a Matchless with a family body, which provided ample room for the purpose. To be equipped with a capable machine and trustworthy is equivalent to possessing one's own train service. The owner and designer of this portable film factory is Mr. E. G. Tong, a kinema expert who has had the honour of transforming the Royal Ball Room at Sandringham into a kinema theatre, and providing a kinema entertainment for the Royal Family.

Transporting a Laboratory.

When the kinematographer has taken his picture he has to return to the laboratory to have the negative developed and printed. This often means a long train journey, causing much delay in the production of the films that are wanted for showing topical events and pictures of local interest in the provincial towns. Mr. Tong has overcome the annoying part of waiting by using an outfit capable of being easily transported, carrying the facilities to manufacture the pictures on the spot. It will mean that pictures can be taken and made ready for showing to the public within two hours after an event has happened.

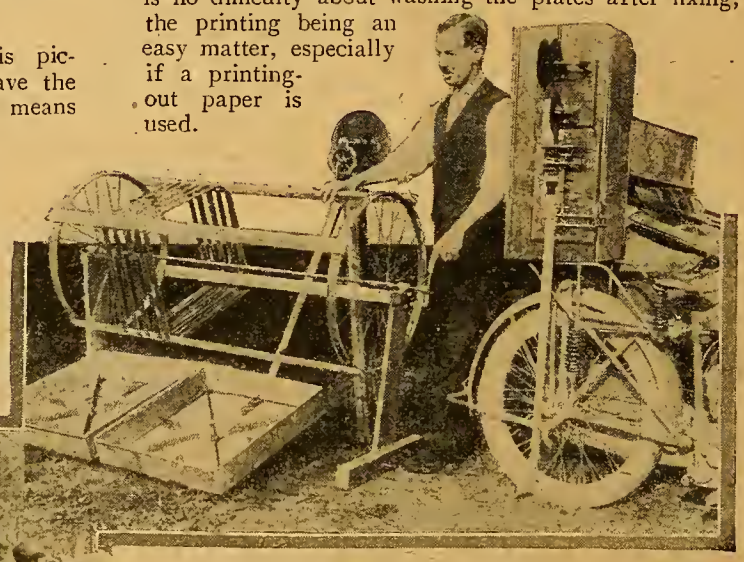


The whole of the apparatus, including developing, printing and drying arrangements, packed on a Matchless outfit.

The portable plant consists of a developing tank which fits comfortably on the luggage grid; the printer, which is shown on the carrier to give an idea of comparative size, and which travels in a box in the sidecar, and the drying drum which is made to wind the film round. This also stows away, the bicycle wheels on which it is based fitting snug to the carrier.

A Sidecar Darkroom.

Here is another note that will probably interest amateur photographers. When there is a hood and screen fitted to a sidecar, there is no need to seek chance darkrooms for the changing of plates or even for development, for with a very little trouble, and with very little extra fabric, the sidecar may be turned into a temporary darkroom. A piece of good ruby fabric folded double and pinned with drawing pins over the windscreen will provide all the safe working light that is required. By working near a stream there is no difficulty about washing the plates after fixing, the printing being an easy matter, especially if a printing-out paper is used.



Drying the film after its development in a portable tent, which, too, is part of the equipment. The "printer" is shown on the carrier. The negatives of both illustrations were developed out of doors.

POLICEMEN IN DISGUISE.

THAT an ordinary motor cyclist should be mistaken for a policeman is a contingency hardly possible in the British Isles, but in the United States motor cycles are not really popular; but as they have proved to be exceptionally useful to the various police forces, practically every city has its motor cycle policemen. Recently a private driver making his way through traffic found everything gave way for him, and, to his astonishment, he was suddenly called to arrest a man who was guilty of a misdemeanour on the highway. On another occasion a private motor cyclist was resting by his machine, and every passing car slowed up, mistaking him for a motor cycle policeman in disguise. Motor police are only just beginning to receive favourable consideration here; the Isle of Man is the latest locality to recognise their value and to recommend a mobile force.

The Beginners Mount

The light weight of the Hack demonstrated by a young owner of the fair sex.

This young lady keeps her Ner-a-Car in the entrance hall—but not everyone possesses such handy accommodation.

Notes on the Different Types of Motor Cycles available for every Purse and the Requirements of every Purchaser.

EVERY motor cyclist is looked upon by his non-motoring friends as an authority on all motor cycles and their accessories. Sometimes this blind confidence in the knowledge of the rider is well placed, but frequently he is far from competent to advise on the choice of a machine to meet the requirements of every man, woman and juvenile who may seek his advice.

Quite recently the writer overheard a young enthusiast suggesting to an elderly and corpulent uncle that he should purchase a certain well-known 70 m.p.h. mount.

This is just as ridiculous as the suggestion made by a successful racing man that his eighteen-year-old boy cousin should commence his motoring career on a scooter.

Everyone Catered for.

There are now on the market motor cycles suitable for the needs of every person who wishes to own a power-propelled machine, and it is in order to assist those readers who have friends seeking advice that this article has been prepared.

Keen motor cyclists naturally consider that every boy and girl should become a member of the motor cyclists' fraternity immediately they attain the age of fourteen—that is, when the law permits them to hold a driving licence.

In our issue of February 23rd this year we published an article by the Chairman of the Auto Cycle Union on motor cycles for boys and girls, and we were not surprised that it aroused the interest of many readers who agreed with Colonel Brereton. Others did not!

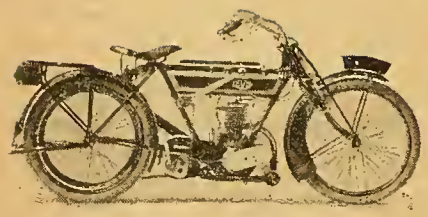
We think, however, that it was definitely settled at the time that age has little to do with the question of whether a person as young as fourteen shall be allowed to ride. Much depends upon the temperament of the juvenile. There are boys and girls of fourteen who are as clear-headed and as likely to be careful on the road as the majority of youths of eighteen to twenty—more so, in fact. The writer maintains that if the novitiate stages are passed before the rider reaches the so-called "mad" age of the early twenties there would be less thoughtless driving on the part of the younger generation in particular and motorists in general.

The Selection for Young People.

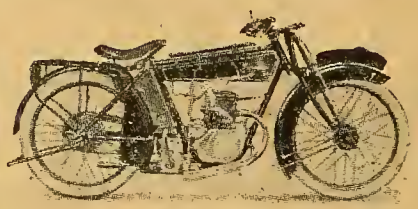
However, we will accept as granted that a schoolboy or schoolgirl is a person fit to ride, and as a large number of our readers have friends who are parents of boys and girls keen to own a motor cycle, we may start by discussing the types of machines best suited for our youngest friends.

Well-known miniatures of the seat scooter type: (Left) the Skootamota; (Centre) Unibus; (Right) Kenilworth.

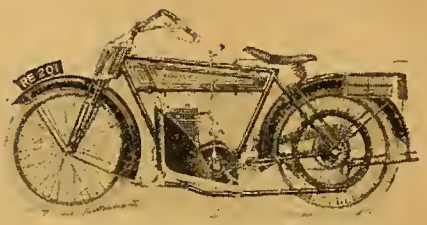
LIGHT TOURING TWO-STROKES WITH 24 in. WHEELS.



211 c.c. Levis.



220 c.c. Velocette.

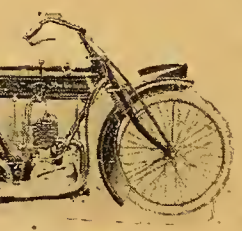


225 c.c. Royal Enfield.

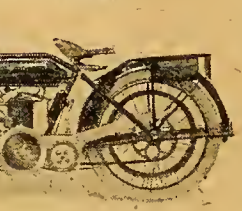
Very often the requirements of a schoolboy and a schoolgirl are regarded as identical. A little thought will show that this view is an erroneous one; the average boy and the average girl of school age have totally different temperaments, and it is obvious that what might be suitable for one might easily be unsuitable for the other.

As an example, we may accept as fact that almost any small lightweight motor cycle of the conventional type is suitable for a schoolboy, provided the question of size is considered. There are boys of fourteen who are physically equipped in height and muscle to handle the most powerful machines; therefore, in such cases a 26in. wheeled mount will meet the demands so far as size is concerned. On the other hand, the average schoolboy of fourteen or fifteen, being still in the growing stage, may be short in the leg; therefore, a 24in. wheeled machine will be preferable. This question of machine size is more important than is generally appreciated, for very few people feel confident on a machine on which it is impossible to sit astride with both feet firmly on the ground. There are not very many 24in. wheeled machines on the British market, and, on referring to *The Motor Cycle* Buyers' Guide published on April 6th this year, the reader will find the following motor cycles which are so equipped: Connaught, Levis, New Hudson, Radco, Royal Enfield, Triumph Junior, Velocette, and Verus.

Wheel size does not always govern saddle position, however; it does not necessarily follow that if a machine has 24in. wheels the riding position will be any more convenient for a short-legged rider than other machines which have 26in. wheels, but as a rule it may be accepted that the extra inch in the radius of a 26in. wheel machine will almost invariably increase the height of the saddle from the ground.



211 c.c. New Hudson



293 c.c. Connaught.

We will not enter into the question of whether the machine should be a four-stroke or a two-stroke. There is so little advantage in one type over the other. The novice need not consider it, and both have characteristics of their own.

The Schoolgirl's Machine.

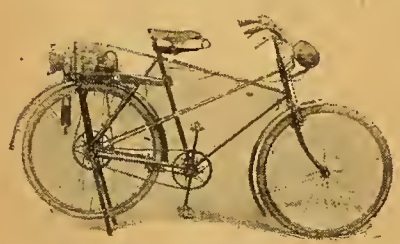
In deciding upon a motor cycle for a girl, other factors than height must be taken into consideration. The average boy is much stronger physically than his sister of the same age; therefore, to a girl light weight is as essential as the question of ease of handling when dismounted.

Hundreds of schoolgirls in this country are using both 26in. and 24in. wheeled machines of the same types used by boys, but most parents—especially if they are not motorists themselves—prefer their daughters to ride motor cycles designed expressly for ladies. Also many girls are not physically capable of handling a comparatively heavy machine.

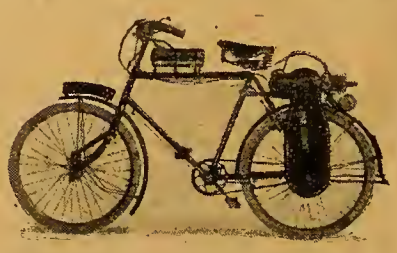
From the above it must not be assumed that to handle a motor cycle requires considerable effort, but first impressions with a parent count a great deal. Therefore, in recommending a machine to the parents of a delicately-constituted girl, a light machine with a low centre of gravity should be suggested.

There are many machines available fulfilling these needs. The photograph in the heading of this article shows a schoolgirl holding a little Hack in her arms; an ordinary lady's cycle could not be handled more easily. The Hack represents a type of motor cycle which is particularly adapted for schoolgirls and for ladies who desire a mechanically-propelled machine for shopping.

The same remarks apply to the Kenilworth, which may be regarded as suitable for any rider of the female sex, irrespective of age. Any lady who can handle an ordinary pedal cycle can in a few minutes become accustomed to riding such a machine as the Kenilworth. In fact, it is within our knowledge that a very large number of these little runabouts are in use in the hands of ladies who had given up pedal cycling owing



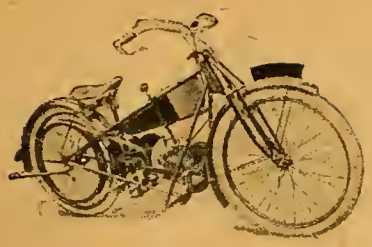
A motor-assisted bicycle—the 105 c.c. Motorped.



Another bicycle with an auxiliary engine—the 130 c.c. Young.

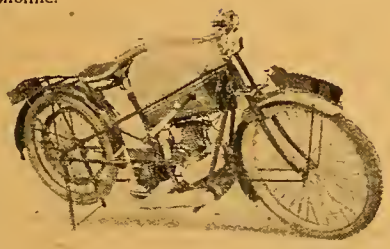
LIGHTER LIGHTWEIGHTS.

Examples of the several miniatures now on the market which, more or less, follow conventional motor cycle practice, yet weigh little more than a bicycle with auxiliary motor.

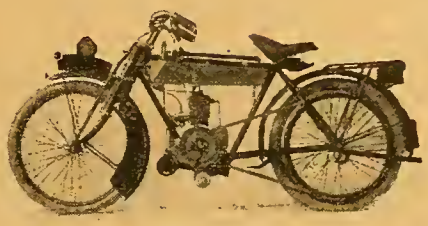


165 c.c. Economic.

124 c c. Kempton.



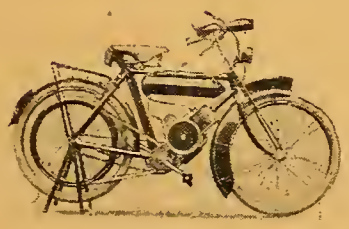
161 c.c. Grigg.



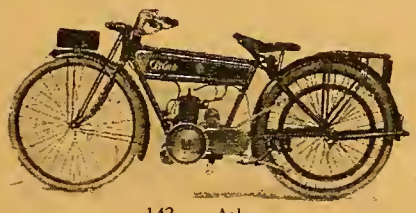
169 c.c. J.E.S.

to the effects of fatigue. These fully-developed "scooters" no doubt suffer from the premature exploitation which the stand-up type scooter received when first introduced, but, in considering them, one should remember that those on the market to-day have survived because they were the fittest, and are in every way practicable. Those which deserved adverse criticism disappeared from the market long ago.

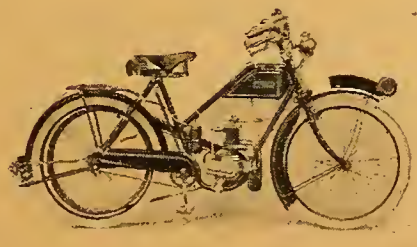
It may interest the motor cyclist who has not tried machines such as the Hack, Kenilworth, Skootamota, and Unibus, to know that these runabouts may be started at walking pace and are docile as any power-propelled vehicle is possible to be. It is undoubtedly the type which should be used by the girl, lady, or elderly gentleman who is nervous to make a start with a power-propelled vehicle.



105 c.c. Airolite.



142 c.c. Atlas.



170 c.c. McKenzie.

Lighter Lightweights.

There is another type which comes between the two types already discussed, and that is the form of motor cycle which is known as the motor-assisted bicycle. There are several in the market, of which the Young and Motorped are excellent examples. The power unit is light and small, and is intended to be attached to an ordinary pedal cycle and used for auxiliary work. Of recent years, however, this kind of machine has been developed into a miniature motor cycle, having a frame specially constructed for it. Some examples are illustrated.

Still another type has been introduced for those who require a light, easily handled machine of low power, a group in the long range of motor cycles represented by the J.E.S., Atlas, Economic, Grigg, and Kempton.

In a class by itself, perhaps, is the Ner-a-car, a machine unusual in its construction and capabilities, being designed with the avowed purpose of catering for those who require a motor cycle upon which they can ride without the need for special clothing. The Ner-a-car embodies all the mechanical elements of a motor cycle of conventional design, but instead of a tubular frame and spring forks a miniature chassis and special front wheel springing are embodied.

Of machines of the conventional type there is a very large number, and, since all British motor cycles are, to all intents and purposes, of equal merit in the matter of reliability, their differences lie in their designers' individual ideas of refinement and general design.

When one is choosing a machine for an acquaintance who is already a motor cyclist at heart, there is very little difficulty in suggesting the mount which will best suit him. The main point is usually the price, and if the young man has £75-£85 to spend, it becomes rather difficult to differentiate between such excellent machines as the 349 c.c. £68 Raleigh, the 499 c.c. £77 Rudge-Multi, and the 498 c.c. £85 Ariel. These three machines are typical examples of what is available at approximately the same figure, and one has to decide whether the potential rider requires (1) a kick-starter, as is fitted to the Raleigh, (2) a big machine with a reputation for speed but fitted with all-belt drive as the Rudge-Multi, or (3) such a machine as the Ariel without kick-starter, a full-powered mount shorn of some of the refinements of its more expensive sisters from the same factory.

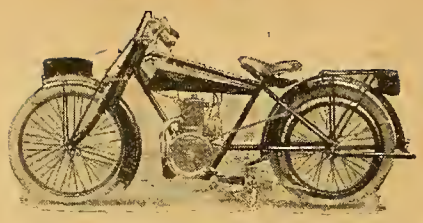
£100 to Spend.

When the £85 mark has been passed, and £100 is the figure, one is then able to ask those seeking advice whether they require a sidecar or a solo mount.

The Beginner's Mount.—
It is now possible to obtain sidecar outfits as low as £67 (the Sirrah two-stroke outfit), while among other sidecar machines available between this figure and £100 are the O.K., Ivy, Royal Ruby, Beardmore, Allon, Connaught, Hawker, Omega, and similar lightweight sidecar outfits. For £100 one may obtain a 654 c.c. Quadrant sidecar.

With £100 to spend, the young solo enthusiast will probably ask for a decision between such machines as the Scott, Humber, N.U.T., Triumph, and B.S.A., and the main point to decide will be whether a single-cylinder, a flat twin, or a V twin four-stroke or a two-cylinder two-stroke is the most suitable type of engine for the person concerned. But we need not go further than this, as any young motor cyclist with such machines in mind will have already his own definite opinions on their merits.

There is one point which often crops up from lady enquirers, and that is whether the Scott is suitable for their needs. Almost without exception the lady visitor to the Olympia Show falls in love with the Scott motor cycle because of its neat assembly and its open frame. The design of the Scott was not specially laid out for the next generation of lady motor cyclists. Therefore, it is quite an erroneous deduction that this open-frame mount is a lady's machine. The writer is of the opinion that, while there is a large number of ladies capable of running a Scott successfully, this machine is more suitable for an enthusiast of the sterner sex. In other words, on the point of weight, the Scott is in the same class as other machines of the same power.



An example of the simplest form of motor cycle—the two-stroke Calthorpe with single gear. The type may be procured at a popular price from nearly every manufacturer of two-strokes.

Sidecars.

When sidecar outfits are considered, although the choice is just as varied, the question of suitability does not enter so largely into calculation. So easily controlled are the majority of sidecars on the market to-day that the shortest man or woman can handle the largest machine. Therefore, such matters as saddle height, the disposition of weight, and the overall dimensions need not come into the question.

The recommendation of any particular sidecar outfit will be governed by two things only: price and the number of persons to be carried. As already mentioned, it is possible to obtain a sidecar outfit for £67, but obviously such a machine would be useless to a man who wished to accommodate his wife and a family of small children.

The small sidecar outfits previously mentioned under £100 in cost are suitable in every way for a rider and one passenger. When one young child has to be carried, a larger sidecar is necessary, and therefore increased horse-power to propel it. If there are two juvenile passengers, and one is over ten years of age, the pillion can be used to accommodate the elder child. Even if three adults are to be accommodated, machines of 4½ h.p. are quite suitable, but for

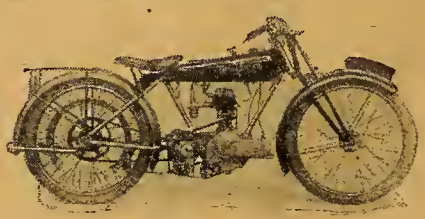
349 c.c. o.h.v. Henderson



346 c.c. Francis-Barnett.

a double-seater sidecar with perhaps an extra passenger on the pillion, or for a man with a large family, a twin outfit from 7 h.p. to 8 h.p. should be considered.

In surveying the various motor cycles on the market no attempt has been made to include them all, neither does the writer suggest that one machine may be more efficient than another. Cost sometimes governs efficiency to a certain extent, but it may be taken as a general rule that increased cost represents extra refinement. In other words, there are no bad motor cycles—but some are a little better than others—and the improvement as a rule is confined to details and finish. The less important makers fit the same engines and gear boxes as many of their contemporaries with large outputs.

There are so many motor cycles available that there is no reason why anyone should ride a "misfit." There is such a wide selection in every group. In addition to the various types and machines mentioned in the foregoing, there are other groups which should be considered separately. The following may assist the reader to classify them mentally

REPRESENTATIVE MEDIUM SIZE DUAL PURPOSE MOUNTS.

Medium Size V Twins for Sidecar Work: A.J.S., B.S.A., Ariel, Omega, Rover, Excelsior, Zenith, Campion, James, Lea-Francis, Mohawk, P.V., Sirrah, Martinsyde.

Full-powered V Twin Sidecar Outfits: B.S.A., Ariel, Blackburne, Excelsior, Zenith, Campion, Hazlewood, Sunbeam, Rex-Acme, Indian, Harley-Davidson, Vindec, Matchless, Royal Enfield, Rudge, and New Imperial.

Single Cylinder Dual Purpose Mounts: Sunbeam, Triumph, Abingdon, Rover, Beardmore, P. & M., Rex-Acme, Rudge, Norton, James, Blackburne, Bradbury, Wolf, Hawker, Powell.

Medium Size Two-stroke Sidecars: Scott, Stanger, and Dunelt.

Fast V Twin Solo Machines: N.U.T., James, Martinsyde, Zenith, Indian.

Fast Flat Twin Solo Machines: Douglas, Humber, Brough, A.B.C., Wooler, Brough, Coventry Victor, Raleigh, Harley-Davidson, Zenith-Bradshaw.

Fast Single-cylinder Solo Machines: Norton, Triumph, Sunbeam, Rudge, Ariel, Rover.

Four-cylinder Sidecar Mounts: Henderson (U.S.A.), F.N. (Belgium).

SUMMER AND THE ROADS.

DESPITE the fact that road-repairing facilities and particularly the funds necessary for them, have not altogether kept pace with the development of motor traffic, we have at any rate one genuine cause for congratulation, and this is that the dust fiend, which created so much dissatisfaction in the early days, is now on most of our roads but a memory.

The employment of tar, whether as a top dressing to be brushed into a macadam surface or as a substance with which road metal can be coated all over before it is laid, has done much to prevent a condition of affairs that would have been intolerable had the old macadam or sand and gravel untreated surfaces been permitted to remain on thoroughfares subjected to heavy and continuous traffic. Last summer's drought, with which this summer seems desirous of competing, would in the old conditions have meant dust of a quantity and quality that would have made the roads practically impossible both for motorists and for the rest of the community.

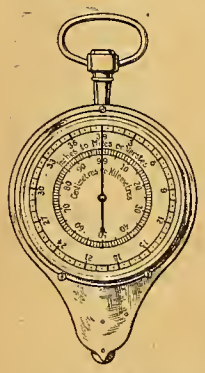
Whatever the effect of tar may be upon fish life, there is no doubt whatever that when spread upon a road surface it contributes in no small degree to the good health of the community at large, and the ever-increasing use of tar is one of the best pieces of evidence that the modern road surveyor, within the financial limits that restrict him, is making a real effort to adapt both himself and the surfaces under his control to modern requirements. In due course we may well find that bitumen and concrete will take the place, to some extent at any rate, of tar; but further experiments with concrete are needed.—*The Autocar.*

Secrets of the Map

Map Reading for the Motor Cyclist. Many Stories unfolded in unsuspected places.

EVERY road lover, and every motor cyclist must of necessity be one, should be an enthusiastic student of road maps.

Half the pleasure of ranging the countryside is to be derived from a knowledge of its geographical characteristics, its streams, rivers and hills—in short, the "lie of the land"—and of its villages, habitations, woods, prehistoric remains and historical associations.



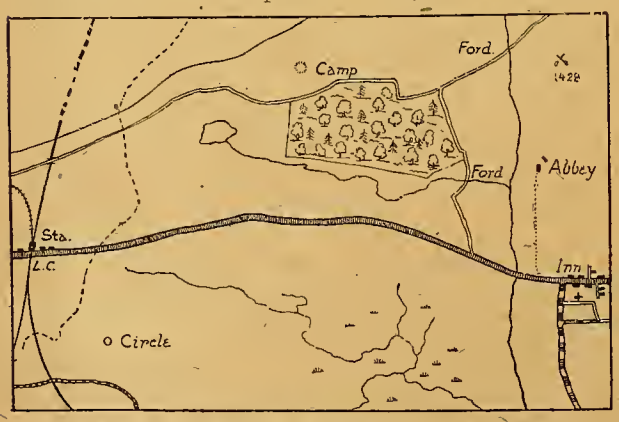
A map measurer for the accurate estimation of road distances.

All these things are told on a good contour road map.

No special knowledge of cartography is needed to follow with ease the signs used in maps, for they are to all intents and purposes self-explanatory.

Touring in an Armchair.

To a motor cyclist who tours extensively a full set of large scale maps to cover the whole of Great Britain is invaluable, although these may be supplemented by a small scale road guide or route book when actually travelling. Routes may be planned with a fair estimation of the type of roads to be traversed, the main gradients to be encountered, and the towns and "show places" likely to be visited.



A small section of country, the mapping of which is analysed in the accompanying text.

Quite apart from the actual use of the map in planning a tour, and its help as a guide, philosopher, and friend during the actual journey, no more delightful retrospective pleasure is to be had than that derived from browsing over the outspread sheets on a winter's evening, tracking the paths over which one has gone, noting the *détours* one might have made, learning new things of places one thought familiar, or plotting out new routes for forthcoming excursions.

Much information about a bit of coast-line is hidden in this simple representation of its features.

A useful accessory for use in conjunction with the maps is a map-measurer, a simple little apparatus obtainable from most optical or scientific instrument dealers. It is a small machine having a milled wheel which is traced along the road to be measured, the distance being recorded on a dial by a pointer driven by a reduction gear.

Geography and History in Symbols.

The type of rider who buys what is described as a "road map" can gain therefrom no more knowledge than the mere direction of the route from place to place. With the contour-coloured reduced ordnance maps he gets all the information he can need for his enjoyment of the district in which he is. Take the first of the diagrams illustrating this article.

A section of country of about eight square miles area is shown. Without any reference to the coloured

Secrets of the Map.—

contours which would be found on the actual map, it can be seen that this tract of country has a general slope from the top left corner, since the railway (*heavy black line*) passes through a tunnel (*line dotted with white*) there. The railway also goes under a by-road (*uncoloured double line*) and crosses a main road (*wide coloured line*) a little farther along by a level crossing (*L.C.*) at a station (*Sta.*), thus further indicating a downward fall of the land, confirmed in the bottom left corner by the line crossing above a third-rate road (*small coloured dots*). From the station a light railway, possibly a mineral line (*thin line with cross-bars*) branches away. Also in the top left corner some indication of the contour of the land is given by the course taken by a canal (*thin black line*), and probably following the foot of the hill, and most likely in a shallow valley, is the by-road which skirts a wood (*conventional trees*) and passes through a considerable watersplash (*ford*). On the lower side of the wood is a winding stream, the outlet of a small pond and tributary of the river of the first splash; this stream also provides a water-splash on a lane which enters the main road (*full coloured*) between station and the village, on the right. The village possesses the means of spiritual comfort (*cross*) and physical well-being (*inn*). Leading down the valley of the river from the end of the village is a second-class road (*long coloured dots*).

Below the main road is evidently a tract of swampy ground, for there is a meandering stream with many branches and the conventional signs for marshy land; this further confirms the general idea of the contour first obtained.

Places of Interest.

Evidently this district is rich in historical wealth. Above the wood a Roman strategical point is indicated (*camp*); at the head of the marshland are Druidical

A contoured map of a piece of country near the sea. A road which promises to be a freak gradient is shown.

or maybe prehistoric remains (*circle*). Over on the farther bank of the river a battle was fought in 1428 (*crossed swords and date*), while, always with an eye to pleasant location and fish on Fridays, the Cistercian monks erected a monastery opposite the confluence of the two streams (*abbey*); this is reached from the main road by a footpath (*thin dotted line*). A county boundary on the left (*heavy dotted line*) is the last sign needing explanation.

What a wealth of interest to explore in a rather sparsely filled map of eight square miles!

A Breath from the Ocean.

Let us prospect in our study the rocky promontory shown in the second map. This has its contour lines shown by light dotting. The cape has two fairly high headlands with a lower lying neck to the mainland. The sea is already making inroads there, and one day the cape may be two islands. Already two small islets have been left in the sea and there is a lighthouse (*L.H.*) on one. The coast line promises rugged scenery on the head, for the cliffs are steep or sheer (*shading*) and there is deep water at their base for the five-fathom line goes farther in towards the mainland. The low-tide line in the bay indicates the possibility of bathing from a sandy beach. Two submerged islets beyond the lower horn of the head come up to the five-fathom line — evidently a dangerous coast.

Freak Hill Hunting.

Freak hill hunters will find that contoured maps are invaluable. Take the third illustration. It represents three hills in a group, the summits being of rounded, slightly conical formation. To the left is another hump of lower altitude, and between the group and this a valley leads to the sea.

Down towards the sea the flanks of the group are steep and rocky, as the shading indicates. The bay is fairly wide, with a good beach and cliffs on the right. A road leads down to two houses by the sea. It has fierce hairpins and probably appalling gradients; moreover, it hangs on the edge of a ravine, the rocky side of which would suggest a loose surface. No doubt there are tilled lands and meadows in the bottom of the secluded valley.

Evidently this hill is worthy of exploration, and perhaps it may take all the skill of man and power of engine to re-climb it if the descent is made. Imagination constructs the scene as it might look from the sea, and pictures a fearsome climb.

Those who have seen the actual place say that the sketch is very like it; it is the Screw Hill, in Wales, which the writer has never seen only in the secrets of the map. WHARFEDALE.

—and what the map conveys to the studious observer forms the base of a rough sketch of the characteristics of the place, which is not belied by a visit to the actual spot.

Mrs. Hardee commencing the severe climb of Abriachan in this year's Scottish Six Days Trials.

Trials Reminiscences of a Lady Competitor.

By Mrs. MABEL HARDEE.

MY entry into the sport of motor cycling was caused entirely by envy. My husband, who at that time (1905) was the owner of a very early Quadrant, used to tell me such wonderful tales of where he had been with it that I worried him to get me one as well.

Ladies' motor cycles were few and far between in those days, but chance favoured me when Mrs. Kennard, of Market Harborough, wanted to sell her machine. This was fitted with a Motosacoche engine, round belt, and a carburetter that worked when it liked. It had fine pedalling gear, and needed it too.

At that time I used to read with awe in *The Motor Cycle* what wonderful things were being performed by Miss Hind and Mrs. Cooke, and wanted to do likewise, but I had not quite enough courage to enter the run to Harrogate organised by the Herts County Club. This event was for open-frame machines only, and I did not think my old mount good enough for such a long journey. As I had just become the proud possessor of a P. and M., however, I felt a bit sore about the "open frame" regulation.

Four entries, I believe, were received for this strenuous trial, and I heard afterwards from Miss Hammett that it was quite a sporting run. Miss Hind, I understand, did not care much for reliability trials, her great ambition being to win a hill climb.

Early Sidecar Experiences.

Before I owned a machine myself we had a Vindec Special, and my husband thought it was good enough to pull a sidecar. He arrived home one Whit-Monday with a terrible-looking basket affair, and tried to persuade me to sit in it, but I had watched his erratic course up the roads. Anyway, our old friend Mr. T. J. Ross was game enough to venture, but got tipped out twice for his bravery. I think this episode started him motor cycling, and he is now a consistent competitor in the trials.

Becoming quite confident with my P. and M., I often started off alone for Gloucestershire to visit friends. On one occasion I struck some bad weather on the western side of Oxford, so donned the various garments one always carried. I must have looked rather a freak, for, stopping in Northleach for petrol, I was much amused at being called a naughty boy.

Some time after this we heard that Rising Sun Hill was to be included in a one-day trial, so made up a

Through Feminine Goggles.—

party to test our ability on the then new hill. Knowing this district very well, I was sent on ahead. When I reached the hill I promptly turned sharp right. As the surface was of wet clay, I skidded round into the door of a large house, knocking the door down. The maid arrived, looking somewhat scared, and I heard a voice in the background asking what was the matter. The maid replied that it was a lady on a motor cycle. The voice replied: "Lady, indeed! no lady would ride such an invention of the devil!" They promptly 'phoned for a policeman, and, I believe, would have had me locked up if they could.

An Unofficial Event.

Keen rivalry has always existed between my husband and myself on the matter of hill-climbing, and this gave rise to much discussion. My P. and M. was no match for his T.T. Triumph, but I always had an option on a friend's T.T. Bradbury. This led to a very early morning event at Westerham Hill. The rival supporters turned up in great force, and it was with much pleasure some fifty minutes later that I entertained them all with the stake money.

The first machine owned by Mrs. Hardee was a 1905 Motosacoche with round belt drive. On the right is her husband with his Vindec Special.

An Early Trial.

I often smile over my first competition, which afterwards became known as the A.C.U. Fiasco Trial. Wherever one went, one found competitors wandering about, and it got dark before any of us reached Croydon, the start and finish. I struck Pebblecombe in the dark and heard Miss Hammett asking, in a surprised tone of voice, what I meant by failing. I think that was a habit of mine, for in the re-run I conked out on Sunrising Hill, this defeat being worse, for my husband was a spectator.

After a little persuasion I was allowed to ride in the 1912 A.C.U. Six Days Trials, which started from Taunton. Before the event we went on a trip to Porlock to try our luck. When I saw the first bend on Porlock I nearly fell off, and promptly decided to go home, but after lunch it did not seem quite so steep.

Porlock in 1912.

The surface then could not be compared to what it is now, for it was quite a foot deep in mud.

The first time I struggled up there in an actual competition I succumbed to my bad habit of putting my foot down, which incidentally lost me my gold in the 1914 "Scottish."

We (Miss Hammett and I were always first off) started on the last day's run at 5 a.m. in the rain, but I got to the second bend before I struck a boulder, for this was before the road was widened, and came off. It was a terrible job to get going again, and when at last I succeeded I turned right round on the way down again.

During our stay in Taunton I heard Miss Hammett excitedly call me to look at the *Daily Mirror* poster, which read, "Women in a Motor Cycle Trial." It *was* rather embarrassing the way we two got "mobbed"; it was nearly as bad in this year's Scottish when we arrived at Aberdeen!

A mount on which Mrs. Hardee made good performances in the 1913 trials—the 496 c.c. P. and M.

My great ambition in 1912 was to climb Beggars Roost, but when we arrived there in the trial I had a bad attack of nerves. To my surprise and relief I got up, but my better half was not so lucky. I was told that his first question, even before he picked up his machine, was, "Did my wife get up?" He did not look exactly pleased when we met at lunch time. He will deny this, of course.

Through Feminine Goggles.—

I entered most of the trials after this, but the outstanding one was for the Colmore Cup. I think it was the most awful course and weather I had so far experienced. I have never been keen to try my luck there again. At that time we had a big Indian sidecar, and the most enjoyable ride I have ever had was when I took it out solo. It was a struggle to get on and off, but it was worth it, if only to slow up and hear my husband tinkling along on my old P. and M. I might add that he did not let me have it again without a sidecar.

John o' Groats.

I was awfully keen to ride in a Scottish Six Days event, and got Miss Hammett to persuade my husband to let me ride. He was sorry he did when I arrived home with a nice-looking black eye! That was a fine year, for the weather was exceptionally good, and we went to John o' Groats, where we were given twenty minutes extra to have a look round. I remember Mrs. Baxter wanted Rose Hammett and myself to sign the visitors' book together. Doing so, I looked up the "End-to-Enders" comments, which were distinctly amusing (especially those of the late Ivan Hart-Davies).

I had bad luck with tyres then (1913), but as I was riding near Gordon Fletcher this did not bother me much. He was a confirmed practical joker. Riding along from Glenelg, I had a feeling that my engine was seizing. I supplied more oil and then went on again. This happened several times, and Gordon Fletcher remarked that we were quite 40 miles from a railway. I think my face must have been a study until it dawned on me that he had been acting as a drag by hanging on to the carrier.

First Lady to Secure a Scottish "Gold."

I well remember congratulating Mrs. Baxter on being the lucky one to get the first Scottish gold (I have verified this in my record book). Miss Hind got a silver in 1912. I was determined to have another shot, so entered again in 1914, but lost my gold through putting my foot down on two hills. I thought this was pretty hard luck after finishing such a severe course.

In 1914 we took delivery of our first Matchless sidecar, and I soon got the hang of sidecar driving, and persuaded my husband to be my passenger in the Birmingham passenger machine trial, where I met Mrs. Riley, who was then doing great things with her Enfield. I never have received the gold medal I was awarded in that event, and have often wondered why.

Soon after this I had an urgent message to see my aunt, who was very ill, and going there I think I had all the trouble that ever happened to a machine. I lost the compression tap, and gave it up after getting well stung with nettles looking for it. Luckily I found a long screw in the toolbag, which just fitted! Then the chain broke and tore up my "posh" dress guards. There was I in the dusk between Witney and Northleach cutting the chain case off the machine with a jack knife and King Dick. I was jolly glad when I heard another motor cycle popping along. The usual offer forthcoming, I replied, "Yes, please, if you know anything about chains." The answer was, "I've had a Scott."

That was rather unkind, as just lately I have ridden a Scott rather a lot, and think it is the most fascinating of machines; certainly in 2,000 miles I had no chain or any other trouble at all.

An occasion which gives me great amusement is when a letter appears in *The Motor Cycle* from a lady motor cyclist asking why she is not allowed to ride in a London-Exeter or London-Edinburgh run. Well, the average lady never bothers to enter any event that specially caters for her. For example, I failed to get six ladies to form a team for the Surbiton inter-team trial in 1921, although I knew Mrs. Baxter had a record entry of seven for a Liverpool trial, when I think two finished—I was not one of them. Mrs. Baxter, in my opinion, is the finest lady solo rider I have ever seen, for the way she handled her big open-framed Rex in the 1913 Scottish trials filled me with admiration.

An Ill Omen.

The first prize I ever secured in the Woolwich club I dropped after it had been presented, and amidst cheers was told I should never win another. The prediction has been falsified, but it has taken me some years to do it, for a club event is the hardest of all to win. I think the Woolwich club has a record number of the earliest motor cyclists on its books, and I know I was highly pleased when Mr. Collier, senior, insisted that I should become a member. For then, as now, ladies are not exactly welcomed in the motor cycle clubs!

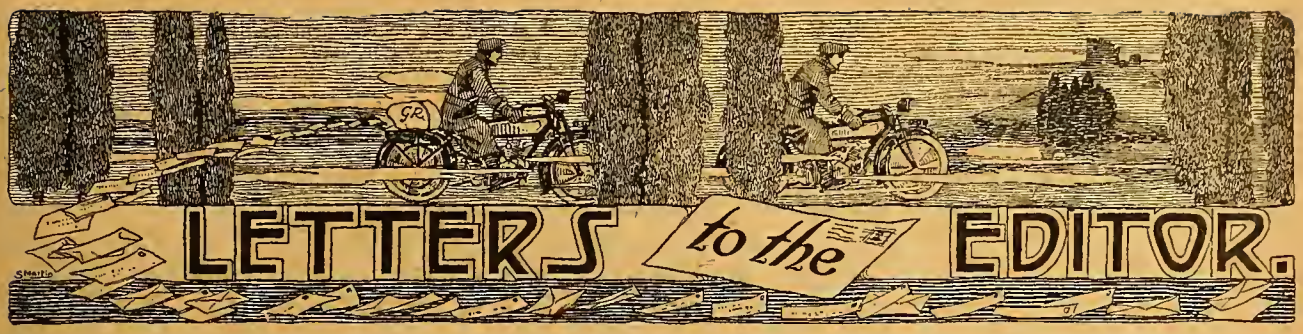
Whilst I was in hospital during a severe illness the nurse seemed very interested in the fact that I motor cycled, and it did not require much persuasion to get her to try driving. She was so enthusiastic that we lent her our Matchless, and often used to meet her driving in Greenwich Park with never less than three up. She finally bought a B.S.A., a choice she never regretted.

This Year's Scottish Trials.

These notes would be incomplete without a mention of the 1922 Scottish Six Days Trials. It seems I am fated to get a silver medal when the thing I want most in the world is a Scottish gold. But, as Mrs. Bell, the A.J.S. rider, informed me at the finish, there is still another year. I think everyone was sorry to see Mrs. Janson pack up on the last day, for she is a real brick and a jolly good sportswoman. We should all have been disappointed also had Mrs. Knowles not gained a gold this year, for this lady is a wonderful rider on a solo machine.

I wonder whether Mrs. Knowles saw the funny side—when she suggested that I should have been warmer in breeches? I cannot picture myself thus clad. They are O.K. for a *petite* woman, but, as I pointed out, I weigh 14 stone.

By the way, I was so impressed with the splendid A.J.S. which Mrs. Knowles rode that we have chosen it as a fitting machine in which to start our one and only daughter on her motor cycling career.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.

THE NAVAL OFFICERS' EVENT.

Sir,—The Arbuthnot Trophy Trial will soon be upon us again, and it is equally certain we shall have the same poor number of entries—a state of affairs which is unfortunately always due to the "exigencies of the Service," and is unavoidable under the present Trial regulations. The purpose of this letter is to suggest that the A.C.U. be approached with a view to opening up the entry to include retired officers of the Royal Navy and Royal Marines—officers who are still gazetted upon the Retired List. The entry list would unquestionably benefit appreciably, and I feel certain that no fear of "shamateur" entries need be entertained. The Trial would still remain the one genuine amateur event of the year.

O. C. H. GIDDY,
Lieut., R.N. (retired.)

INFLUENCE MACHINES FOR I.C. ENGINES.

Sir,—Mr. Lutman's suggestion of a Wimshurst or other static machine for producing high tension current suitable for ignition purposes is, on the face of it, quite feasible. Technically, his arrangement is quite efficient for producing a train of sparks, but he has not considered several important points. Firstly, the penetrating power of a static discharge is not as disruptive, and therefore not as penetrating, as the direct current spark from a magneto. Secondly, he states that a constant spart of ⅜in. may be obtained from 4in. plates. I would point out that no type of machine existing can produce a constant stream of sparks in the true sense of the word, and that the sparks of such a small machine are far from constant. That is to say that the time between each spark is very long compared with the time taken by the actual spark. The point I wish to bring out is, that there would be insufficient sparks to supply regularly the necessary tension for even firing on a high speed engine, unless an oversize machine were used with a very small parallel capacity. WALTER J. JOUGHIN.

Sir,—With reference to Mr. A. Lutman's remarks on "Influence Machines for I.C. Engines," and more particularly to the *diagram*.

Although a keen experimenter, I do *not* relish a tyre valve or other voluntary terminal directing a brush discharge on to my "reach-me-downs." Keep halos for the hereafter. Some criticisms are:

(1.) Size, weight, and *four-belt* drive. Compare (say) with the new M-L "circular" magneto.

(2.) A *wooden* box to retain air at 60 lb. pressure! Why not tyres of beaver board, or pistons made of pulp?

(3.) Why the jar condenser? (*vide* 1).

(4.) External contact box worked by a *slow cam*. What of backfires? How is the spark advanced?

(5.) Why not a multi-(3 or 5) plate machine in a metal box ebonite-lined, gear-driven by rawhide pinions?

Finally, a certain well-known nerve tonic may be excellent for its purpose (diagram bottom right-hand corner), but can hardly serve as well or as cheaply as, say, calcium chloride (anhydrous) as a drying agent. I shall retain my "effete" high-tension magneto for a while. LOSCH-BODGE.
Birkenhead.

THE SPORT AND THE MASSES.

Sir,—I was very glad to see your leader about the general apathy of the general public to the T.T. races. May I suggest the following as a reason?

The average county cricket ground, and all the important races such as the Derby and Ascot, are really nothing more nor less than glorified garden parties. The vast majority simply go to gossip with their neighbours without taking any interest in the sport at all. I should think this covers 80 per cent. of people. Of the remaining 20 per cent., about 18 per cent. go simply to see what money they can make, and the remaining 2 per cent. are the only ones really interested in the sport.

Well, motor cycle races are not, as yet, garden parties, and unless they become so they will never become as popular as they should do.

In conclusion, I think it is something to be thankful for to know that all who watch motor cycling are true sportsmen and nothing else. R. O. BINS.
Thanet.

Sir,—In reference to your interesting remarks, under the above heading, wherein you deplore the lack of interest taken by the general public in the Tourist Trophy Races as compared with the Derby or University boat race, etc., the reason is easy to understand. The latter are held within a stone throw of London, with every convenience and comfort for spending an enjoyable time witnessing two of the finest forms of sport.

Can the masses or non-motor cycling public be expected to feel the slightest enthusiasm respecting the T.T. races, when to reach the venue means, in most cases a long train journey, and the inevitable tedious and uncomfortable crossing to and from Douglas? How many of the thousands who annually attend the Derby or Grand National would do so if those races were held in the Isle of Man?

To popularise the T.T. races and bring them conspicuously before the public they should be held on the mainland, either in the north-west corner of Yorkshire or in Mid-Wales, localities sparsely populated, where ordinary road traffic could be suspended temporarily without causing any serious loss or inconvenience.

As I believe the districts mentioned have been under consideration, I need not dwell upon the subject, beyond expressing the hope that some time soon the T.T. will be held where the multitudes can flock to see it, without the penalty of a troublesome and expensive journey as at present. R. G. LINDSAY.

Sir,—Many keen motor cyclists must have disagreed with your editorial of last week, in which you express the hope that the daily press will take up the T.T. and boost it. I do not think you can be in close touch with the effusions that appear daily under the heading of motor cycle notes in various daily papers. The writers are often ignorant of their subject, generally inexperienced, and sometimes influenced by advertisements in their paper to give undue praise to certain makes. They have no knowledge of the respective values of trials, races, etc. W. B. TOBEY.

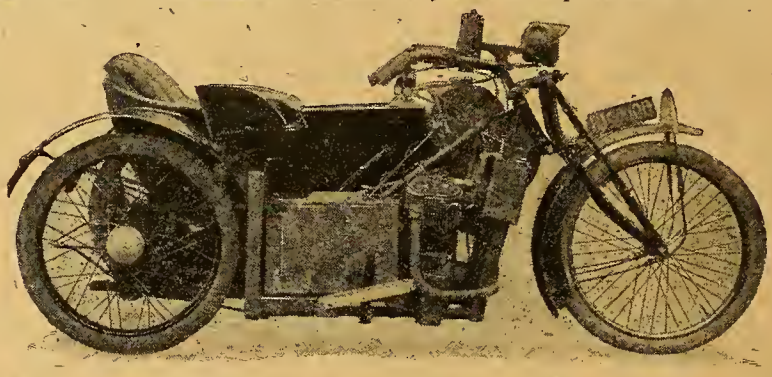
SHAFT DRIVES' UNPOPULARITY.

Sir,—In a recent issue of *The Motor Cycle* Mr. G. Kingdon stated that a shaft-driven spring frame outfit is never seen on the road. I would refer him to your issue of the 29th April, 1920, which illustrates my three-wheeler in combination form. This machine is exactly what he describes, *i.e.*, it is shaft driven by bevel wheels directly from the engine shaft on top gear and all the wheels are sprung. If Mr. Kingdon or any other reader is interested in this design I shall be pleased to show him the machine very shortly at my new motor cycle premises, No. 529, Croydon Road, Beckenham, Kent. It might interest him to know the secret of success lies in the design of the frame and support of the rear portion of the machine, which is covered by a patent.

This same machine has been running since March, 1920, and has been giving every satisfaction.

The photograph shows a few recent refinements which have been added. Its outstanding merits include high efficiency drive, transmission worry and maintenance nil, free access to driving wheel and tyre, complete springing of *everything* on the machine, and a first cost lower than any other machine of similar power now on the market.

W. H. WOOD, A.M.I.E.E.



A shaft-driven motor cycle of unusual design. Observe the unobstructed driving wheel. (See letter from Mr. W. H. Wood.)

GEAR RATIOS.

Sir,—Apparently a large number of riders are growing dissatisfied with the gear ratios provided for them by the manufacturers of their favourite machines. The complaint in most cases seems to be that the top gear is somewhat on the low side, and that subsequent drops in the gear box constitute too high a percentage of the top gear. This is probably readily accounted for by the modern reliability trial which is made exceptionally severe in order to eliminate all but the very best of outfits. Competition riders have found that they must have an exceedingly low bottom gear to surmount the various obstacles they encounter in these trials, and that once having dropped into bottom gear it is a somewhat difficult matter to engage one of the higher gears unless these are somewhat lower than those used by the average tourist. As a motor-cycle manufacturer does not know into whose hands his machine is likely to pass, having once disposed of it, he plays for safety; consequently the average machine is geared much lower than is necessary for the average rider.

If a larger number of gears than three is employed, the problem is considerably simplified. The top gear can be reasonably high, say 4½ in place of 5¼, the bottom gear may remain the same as in a competition engine, and having more steps at his disposal the gear designer may make his gear ratios somewhat closer together, with the result that if the machine can do, say, 45 m.p.h. on top gear, it is still capable of 30 m.p.h. on its next speed, 20 on the second speed, and about 13 or 14 on bottom gear, if a four-speed outfit is used.

It goes without saying that with a box of this description a higher *average* speed is possible without having to travel excessively fast at any time. In fact, the rider has the advantage of what is known as a close-ratio three-speed box with the added advantage of a lower emergency bottom gear.

I. COHEN,
for John Jardine, Ltd.

Sir,—In reply to the Manager of Martinsydes, Ltd., I beg to remind him that a 499 c.c. Rudge and sidecar secured a gold medal in the Scottish Six Days' Trials with a low gear of 12 to 1; also there are hundreds (probably thousands) of Enfields running about with only two speeds—5 and 9 to 1. (The ratios are approximate.) Where, then, does the absurd ratio of 17½ to 1 come in?

Our manufacturers do not realise that the average tourist (who is in majority) does *not* want to climb freak hills; he has too much respect for his tyres and transmission for that.

D. HURREN.

INCORRECT GEAR CHANGE INSTRUCTIONS.

Sir,—I should like to comment on the crude instructions on gear changing given in many makers' instruction books. The makers of a certain very attractive sports model recommend changing with the exhaust-valve lifter, yet later they say "one sees constantly riders, who, by their harsh control of their mounts, are stamped as either novices or the utterly careless." Then again, "It is not necessary to declutch when changing gear. It is sufficient to raise the exhaust."

Really one begins to ask oneself if there is any defence for this kind of treatment with a machine with a good clutch, I should very much like to hear it. One sees enough of this changing of the "lift-the-exhaust-and-slam-it-in" type to make a policeman weep.

UG CHUGALUG.
Chatham.

PENALIZING THE PRIVATE OWNER.

Sir,—In the report of the results of the recent London to Edinburgh trial it is stated that the two riders who completed the course on Hawker machines were disqualified because the award was advertised before the committee meeting, and the existence of such a rule, applied in such a manner, has caused me seriously to consider whether it is worth while for a private rider to enter such a trial.

I have studied the advertisements, but have failed to discover that any private owners advertised the result of the trial. It appears, however, that the *makers* of the Hawker machine placed an advertisement last week in one case, stating "2 entered, 2 gold medals awarded," whereas the other ran, "2 entered, 2 finished." This slight difference of wording may be the result of a printer's error, in which case I am of opinion that the disqualification should be withdrawn forthwith. Even if the advertisement, which is apparently the cause of the disqualification, was correctly printed, I cannot see the justice of penalising a private rider simply because he happened to be riding a particular make of machine, the makers of which placed an advertisement claiming an award which, at that time, had not been made.

Surrey. X.H. 1792.

PISTON CLEARANCE.

Sir,—A little enlightenment might be beneficial to your correspondent signing himself "Amused" in your issue of the 15th inst.

The really amusing part would appear to lie in the fact that this correspondent, whoever he may be, had nothing whatsoever to do with the design or manufacture of the piston in question, and which is now being used as standard in the G.R.I. engine.

It is possible that he may have dealt in some way with the original low compression pistons with concave crown. The pistons now standardised and used in the London-Land's End Trial have a domed crown, and give a compression ratio of 6.5 to 1.

The facts are as stated by "Ixion," except that the clearance error emanated from the grinding rather than the turning shop.

L. W. NEILSON,
for G.R.I. Motors, Ltd.

MISREPRESENTATION OF DATES.

Sir,—The following recent experience of an attempt to purchase a second-hand machine is not without interest. The first advertisement answered was for a 1915 model. Reference to the maker elicited the fact that it was made in 1914. The next two machines seen were called 1917 and 1919 by the sellers, but proved on inquiry at the maker's to be only 1913 and 1915 respectively. In all cases the machines were of the same make. The prospective buyer, who is still without a cycle, was put to quite unnecessary expense in travelling to see these machines, and in wiring the makers for confirmation of date, while the latter, of course, were also put to a certain amount of unnecessary work in looking up old records. ETAPLES.

London.

SKIDS IN THE 200 MILE SIDECAR RACE.

Sir,—I have read your leading article, "Sidecar Skids," in last week's issue of *The Motor Cycle*, but I would draw to your attention the fact that you are incorrect in stating in the last sentence that the "regulations of the 200 mile races apparently took no cognizance of this type of sidecar chassis."

The committee took the matter to which you refer, *viz.*, enclosed sidecar axles, thoroughly into consideration, but it was considered that it would be unfair if some riders had to carry a skid whilst others need not do so, and it was for this reason that it was compulsory for every sidecar to have such a fitment added to his sidecar chassis.

The remark you make regarding stub axles on cars is quite another question. You are, of course, referring to front wheels of cars, whereas the sidecar wheel takes the place of one of the back wheels of a car, because it carries most of the weight, but the back wheel of most cars is not carried by the axle, but by the axle casing, and it is merely turned or driven by the shaft or what might be termed in this instance, the stub axle.

The committee also had in mind in stipulating a skid, the fact that numbers of sidecar machines which are used on Brooklands have been used for some considerable time, and the condition of the steel on the stub axle is unknown. The writer has had some experience in this direction, having had a fractured stub axle at high speed on Brooklands, and he is well able to judge the effect, and it was considered that with so many machines on the track a fracture would be serious, not only to the rider and his passenger, but to following machines. OSBORNE DE LISSA,

One of the Committee of the Ealing and District M.C.C.

HARDENING FOR AMATEURS.

Sir,—No doubt to the average motor cyclist, "Road Rider's" article on "Hardening and Softening" (I should prefer "Hardening and Annealing") will be most interesting, but does the author really expect even an amateur to believe that a man is fool enough to attempt to file a piece of hardened steel, over which the file simply slips?

His method of case-hardening will also convey a wrong impression to the "green one."

It *is* possible to case-harden in an open hearth as suggested, but it is insufficient to get the part red hot, cover with case-hardening compound, and then quench. The depth of the case on a case-hardened part depends upon the time that the treated parts are in contact with the necessary heat; therefore this open-hearth treatment demands that the parts shall be first heated to a dull red, dipped in the compound, and placed in the fire to allow the compound to burn in; after this process has been repeated two or three times, the part may then be quenched in water.

J. FAULKNER

MOTOR CYCLE REMINISCENCES.

Sir,—I have recently made a profitable investment through the medium of your columns, and should like to recommend it to other readers of "our" paper—excuse the possessive, but I am sure all motor cyclists feel a kind of proprietary interest in the "Blue 'Un"—I refer to "Motor Cycle Reminiscences," by "Ixion."

The above has provided me with sundry priceless half-hours of unrestrained mirth, the more so since I am more or less a contemporary of the author; I began, as he says he did, with the front-drive "Werner" over 20 years ago, and can feelingly follow him as he traces the evolution of the motor cycle through all its many vicissitudes up to its present stage of perfection, and I would strongly recommend all motor cyclists, both the novice and the veteran, to buy a copy of the book, both from a point of view of interest in the sport, and the amusement it will provide.

While "reminiscing" with the author it occurred to me that there must be many hundreds of "veteran" riders ("veteran" rather from the length of their association with the sport than from anno domini), to whom some kind of annual reunion for the purposes of interesting discussion on all matters relating to motor cycling, combined with some slight attention to the needs of the "inner man," would be exceedingly welcome. An annual dinner suggests itself as the easiest medium, and I suggest that some other "old-timers" might care to state their views through the medium of your correspondence columns. F.N. 2861.

Westward Ho!

SUMMARY OF CORRESPONDENCE.

Two lady readers wish to convey their grateful appreciation to unknown Good Samaritans who have helped them on the road. In one case thanks are due to the owner of a Sunbeam outfit registered "C.D. 5406" (?) who towed a Douglas outfit to Midhurst on the 17th ult. In the other Miss Betty Holmes was helped from Leadburn Moor to Edinburgh by a change of mounts after a fall, late at night, caused by a broken frame. Her benefactor, who also went away before she had time to thank him, rode a machine bearing "M.S. 3473" (-6, or 8?).

According to Mr. C. L. Field the road from Corwen to Cerrig-y-Druidon is to be avoided. Attention is also called, by Mr. E. R. Wilson, to the state of the Bala-Festiniog road.

The owner of the car, who conveyed Mr. W. W. Scott to the Flint Cottage Hospital after an accident at Holywell Hill Climb, is thanked by the unfortunate gentleman in question; also other helpers.

"M.D. 7507" wishes to thank the Triumph rider who came to his assistance after a spill, in the village of Shere, "directly attributable to the atrocious state of the roads."

Hardy flexible sidecar couplings are favourably commented upon by "Algy" (Coventry).

Mr. A. Walker wishes to thank "U. 8637"—a Scott rider—who towed him from Harewood to Leeds.

Noticing that many dealers are in the habit of advertising "7-9 (clutch model, road racing, and two-speed) Indians" as of post 1914 manufacture, "Enin-Neves" warns readers that, of course, these models were not marketed after 1914.

Service at the start of the London-Edinburgh run on the part of the Lucas Electrical Co. is praised by "W.P.E.W."

Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM."
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."
Eighth Edition. Price net, 2/-. By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

"TWO-STROKE MOTOR CYCLES."
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

"MOTOR CYCLE REMINISCENCES."
By "Ixion," of *The Motor Cycle*.
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

"THE MOTOR CYCLE" ROAD MAPS.
Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

CURRENT COAT

Times to Light Lamps.

July 6th	.. ..	10.16 p.m.
„ 8th	.. ..	10.16 „
„ 10th	.. ..	10.14 „
„ 12th	.. ..	10.12 „

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

One Thousand or Ten Thousand Miles?

How far will an air-cooled engine run satisfactorily without decarbonisation?

The Pathfinder.

Mr. T. W. Loughborough, the secretary of the Auto Cycle Union, will shortly be making a tour of the Six Days Course.

Gas for Lamps.

Nearly 800 tons of calcium carbide were imported into this country during May. All of it is not used in motor cycle lamps, however.

Fifteen Shillings for Noise.

Jersey is the latest place to be concerned about noisy motor cycles. The Chief Constable has issued a warning, together with the notification, that any offender will be fined 15s.

The Perils of the Road.

A correspondent advises that a police trap is frequently in operation over the road from Pinner to Rickmansworth in the region of the railway arch, entering Northwood. The charge, he explains is usually one of "riding to the public danger."

The A.C.U. Six Days.

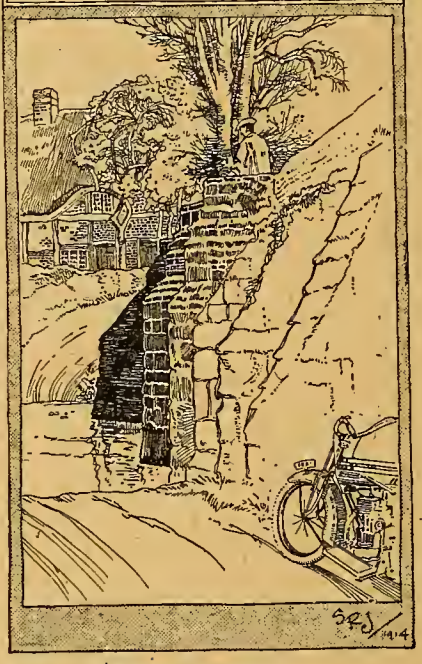
The annual Six Days Reliability Trials of the Auto Cycle Union, arranged for Monday, August 21st to Saturday, August 26th, will start from York, the stopping places on the other days being Buxton, Shrewsbury, Llandrindod, Gloucester, and Brooklands respectively.

Clyno Appointments.

Mr. G. E. Stanley, the record-breaking star, has been appointed works director of the new Clyno Co., while his old colleague, Mr. J. Cocker, will be in charge of the sales department. Mr. Frank Smith has now the controlling interest in the firm. Does this portend the re-entry of this well-known trio into the competition world?

Hills in the A.C.U. Big Event.

Some interesting country, as well as local tit-bits in the shape of hill-climbs, will be embraced in the A.C.U. Six Days Trial. Notable among these are Rosedale Abbey Bank (the hill that was avoided two years ago at the last moment), Sir William Hill, the Sheffielders' delight, and Bwlch-y-groes (between Dinas and Bala), one of the fairest and most difficult tests in the country.



Sidecar Lighting in France.

Originally, the sidecar outfit was left out altogether from the *Code de la Route*, but the latest regulations, which will come into force on January 1st, 1923, will entail a sidecar outfit carrying two white lights facing front and a red lamp at the rear.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Special Features.

WHERE TO TOUR.
THE BEGINNER'S MOUNT.
RUNABOUT AND SIDECAR.
SECRETS OF THE MAP.
A.C.U. "SIX DAYS" REGULATIONS.

400-Mile Point to Point Race.

A 400-mile inter-state race in South Africa is described on page 32.

Barcelona Exhibition.

Quite a large number of British motor cycle accessories were directly represented at the recent exhibition in Spain.

Still Difficult.

Bwlch-y-groes again proved itself a useful test hill in the Midland Centre Trial, and will do so once more in the A.C.U. Six Days.

Crash Helmets in the I.O.M.

Crash helmets were not compulsory in the car T.T. races, and all sorts of headgear, except bowlers and silk hats, were used by the drivers.

Solid Tyres on Utility Machines.

A small runabout two-stroke car is now being placed on the market; it is the product of a large concern, but is by no means cheap as compared with a sidecar outfit. The most surprising thing in its design is the fitting of solid tyres, which a flexible springing system permits.

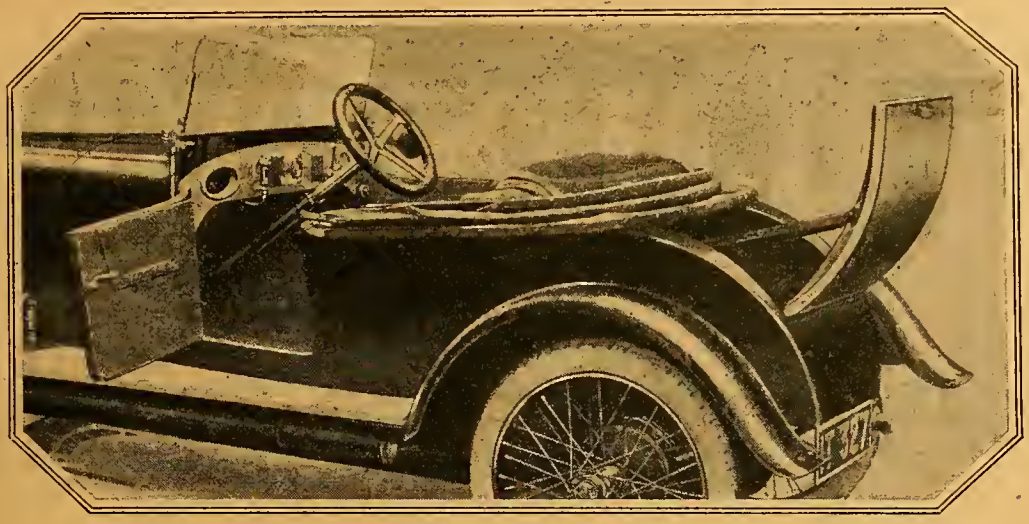
Looting a Burnt Machine.

Like robbing a blind man was the conduct of some unknown looters who removed the magneto, carburetter, carrier, Tan Sad, both wheels, etc., from a reader's old Bradbury, with Scott sidecar, left on the roadside at Little John's Well in Yorkshire, after a fire. The erstwhile owner, Mr. A. W. Downs, 14, Regent Street, Bingley, who could ill-afford the loss, asks us to appeal to the delinquents through the columns of *The Motor Cycle*.

A Day in the Country for East End Children.

An appeal is made to sidecar owners to assist in a good cause. Mr. Otto Thomas, of Byways, Harpenden, will be entertaining a party of children from Bow on Saturday, July 15th. Last year about 80 were conveyed out. This year it is hoped to increase the number, which is really only limited by the means of transport. The party will leave Bow at 9 a.m. and commence the return journey from Harpenden at about 6 p.m.

Will sidecar owners willing to help kindly write at once to Mr. A. J. M. Ivison, 8, Gate Street, Kingsway, London, W.C.2, who has undertaken to organise the transport of the children.



A handsome & roomy car

Beautifully finished in every detail, the G.N. is a handsome and roomy car, fast and a fine hill-climber.

Backed by twelve years' experience, the G.N. is free from faults due to hasty design—its engine, for instance, is famous for its reliability and perfect cooling, it is

guaranteed to do 50 miles to the gallon

Thousands of G.N.'s are in use all over the world, giving fine service in every climate.

Every feature of the G.N., by the strenuous tests of racing and touring competitions, is developed to a fine pitch before it is adopted: all weak points are eliminated.

The G.N. has won the leading awards in all the competitions of the year.

The Touring G.N., equipped with special all-weather hood, adjustable wind-screen, electric lighting installation with dynamo, batteries, switchboard and ammeter, two head-lamps mounted on the wings, with double filaments for bright and dim, tail-lamp, speedometer, with total and trip recorder, detachable wheels, spare wheel and tyre, pump, horn, jack, tools, etc.

Price **£225**

With all-weather body - - - - - - - **£250**

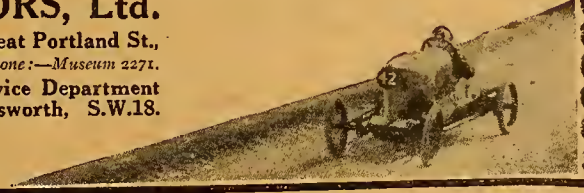
Deferred payments will be arranged by any G.N. agent or by our West End Showrooms.

PREMIER AWARDS IN THE GREATEST EVENTS OF 1922.

"The Essex." The only Gold Medal.
"The General Efficiency." The Westall Cup for all-round best performance.
The Kop Hill Climb. "Motor Owner" Cup for best performance of all classes.
The Land's End. The Pettyt Cup for a very fine performance.

G.N. MOTORS, Ltd.

Showrooms at 222 Great Portland St., London, W.1. *Telephone:—Museum 2271.*
Head Office and Service Department at East Hill, Wandsworth, S.W.18.

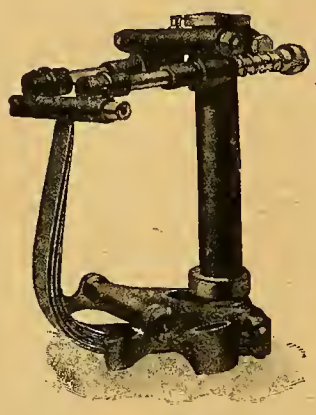


DUNELT

500 c.c. 2-STROKE

12 Important "DUNELT" features

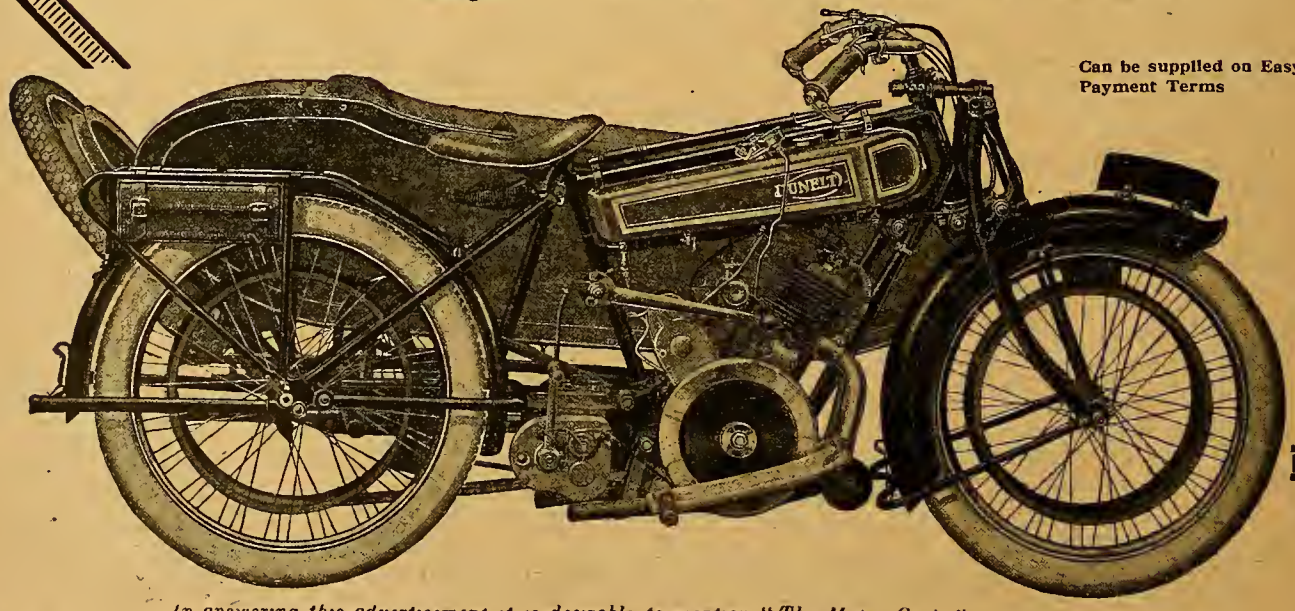
—and 12 sound reasons why you should carefully consider the advantages offered by this distinctive and proved "highest efficiency" machine before deciding upon your outfit.



Front Spring Fork.

1. ENGINE. Of great simplicity, power and efficiency. Only THREE moving parts, therefore possibility of trouble is reduced to a minimum.
2. No valves to grind in when decarbonising.
3. No valve springs, tappets, or cams.
4. TRUNCATED PISTON. An exclusive feature. Gives complete scavenging in combustion chamber and internal cooling of the piston.
5. Solid drop-forged Crankshaft and Connecting Rod.
6. All important parts made of specially selected steel.
7. Roller and Ball Bearings throughout.
8. FRAME. Long wheel base giving great comfort to the rider. The loop frame renders it almost unbreakable.
9. FRONT FORK. An exclusive feature. Specially designed for the Dunelt, effectively absorbs all road shocks.

Can be supplied on Easy Payment Terms



In answering this advertisement it is desirable to mention "The Motor Cycle."

New Pavement Rule.

On Saturday the new pavement rule came into being in London, where pedestrians were reminded in a hundred different ways to "walk on the left."

The Grand Prix.

The Grand Prix, France's premier motor cycle event, takes place on Wednesday next at Strasbourg, and will be described and illustrated by members of *The Motor Cycle* staff in the following week's issue.

Castor and Castrol.

Whenever castor oil is mentioned as a lubricant, quite a number of motor cyclists appear to conclude that Castrol is referred to. Several members of *The Motor Cycle* staff regularly use Wakefield Castrol R lubricating oil, which is particularly suitable for highly efficient engines with aluminium pistons.

As You Were.

At a meeting of stewards and judges held at the A.C.U. last week to decide the winner of the 600 c.c. class in the 200 miles sidecar race, Tucker's disqualification was maintained, and E. A. Bridgman (499 Indian) was officially awarded first place.

Shaft *v.* Chain.

In our correspondence pages this week the question of the relative efficiency of shaft and chain drive is again discussed by a reader, whose shaft-driven machine is illustrated.

Whatever theoretical advantage one system may have over the other, it is practically certain that a shaft would not stand up to the enormous strains imposed by an engine such as O'Donovan's record-breaking Norton, on which Renolds chains are used.

Ladies in Colonial Type Trials.

Our leaderette last week on ladies in colonial type trials has brought a crop of letters protesting against our view that such events are not suitable for the fair sex. The majority of our correspondents, however, appear to have misunderstood us. We clearly referred to colonial type trials, in which some "man handling" of the machines is almost inevitable.

A Scottish Speed Record?

In the speed trials of the Aberdeen and District M.C., a report of which appeared in the June 29th issue of *The Motor Cycle*, it was announced that A. Brown (490 Norton) covered the half-mile course in 21⅔s., at a speed of 84 m.p.h. The club is anxious to know whether this constitutes a Scottish record, and would welcome any communications on the subject.

A.C.U. SIX DAYS TRIAL REGULATIONS.

York, Buxton, Shrewsbury, Llandrindod Wells, Gloucester and Brooklands to be Stopping Places. No Penalties for Wheel Spin.

REGULATIONS for the big official trial are now before the manufacturers, and while the actual route has not yet been worked out in detail, it is clear that this year's event will provide features which will test every quality of the modern motor cycle.

Starting from York on Monday, August 21st, the first day, in all probability, will include the ascent of the two most difficult hills in the trial. These are Rosedale Abbey Bank and Sir William Hill, both of which have in the past formed the subject of controversy.

Monday night is to be spent at Buxton, and the second day is to include the ascent of Bwlch-y-groes, which, as a fair and gruelling test for air-cooled engines, is still without a peer south of the Caledonian Canal.

Shrewsbury is to be the stopping place on the Tuesday night. Nothing has been definitely settled as regards the test hills in this neighbourhood, but as the next night's halting place is Llandrindod Wells, it will be seen that a return is made into that part of Wales which was covered in the big trial of 1919.

On the Thursday night Gloucester is to be reached, which suggests more hills in Mid and South Wales, while as a straightaway run to Brooklands is to be made on Friday possibly Birdlip will be included.

No Consumption Tests.

Owing to technical difficulties, petrol and oil consumption will not be recorded, the trial consisting of tests for :

(1.) Reliability.
(2.) Hill-climbing.
(3.) Speed (on Brooklands).
(4.) Silence.
(5.) Braking.

The two last-mentioned tests have been modified inasmuch as the standard of merit to be obtained for silence and brakes is reduced to 75 per cent. as compared with the 90 per cent. that was required last year.

Classification.

The motor cycles eligible for entry are divided into three general sections, each being sub-divided into classes, and as the regulations embody the classification rules of the F.I.C.M. (*Federation Internationale des Clubs Motocyclistes*), minimum weights and tyre sizes are insisted upon as follows :

Class.	c.c.	Min. weight. Kilogs.	Min. dia. of tyres.
Motor Bicycles.			
A.	250	60 (132 lb.)	50 mm. (2in.)
B.	350	75 (165 lb.)	55 mm. (2¼in.)
C.	500	85 (187 lb.)	60 mm. (2⅜in.)
D.	750	100 (220 lb.)	65 mm. (2½in.)
E.	1,000	120 (264 lb.)	75 mm. (3in.)
Sidecars.			
B/S.	350	115 (253½ lb.)	55 mm. (2¼in.)
F.	600	125 (275 lb.)	65 mm. (2½in.)
G.	1,000	160 (352 lb.)	75 mm. (3in.)
Cycle Cars (3 or 4 Wheels).			
°J.1.	750	250 (550 lb.)	75 mm. (3in.)
J.2.	750	250 (550 lb.)	75 mm. (3in.)
°H.1.	1,100	250 (550 lb.)	75 mm. (3in.)
H.2.	1,100	250 (550 lb.)	75 mm. (3in.)

° Single seaters.

Equipment.

We would remind entrants that the regulations call for, among other items, (1) two efficient brakes working independently; (2) mudguards which project beyond the tyre at least 10 mm. each side and embrace at least 120° of the front wheel, and 180° of the rear wheel; (3) front and rear stands.

The marks which will be credited at the commencement of the trial will be as follows :

General Reliability (100).—Any competitor more than 10 minutes early or late will be penalised 2 marks per minute or part of a minute. Competitors in classes A, B/S, and F, will be allowed 12 minutes each way. In any one day the maximum loss of marks due to deviation from schedule will be limited to 50.

Hill Climbing (100).—5 marks will be deducted for one or more stops on any one hill. *A competitor whose machine has been stopped owing to wheel slip will be allowed to move it on to another part of the road, and if he restarts without delay and completes the ascent he will not be deemed to have stopped, provided his engine has been kept running.*

Silence (40).—Up to 40 marks may be deducted, according to the degree of noisiness, however caused. The test will be conducted aurally during the trial.

Brakes (40).—As in the case of silence, this test will be conducted by observation during the trial, and the marks will be deducted at the discretion of the judges.

Speed (100).—25 laps of Brooklands. 10 marks will be deducted for failure to reach the minimum rates of speed, plus 1 mark for every full m.p.h. below. One mark will be awarded for every full m.p.h. above the schedule speeds, which are as below :

	m.p.h.		m.p.h.
250 c.c. solo	30	350 c.c. sidecars	25
350 c.c. solo	35	600 c.c. sidecars	32
500 c.c. solo	40	1,000 c.c. sidecars	38
750 c.c. solo	44	1,100 c.c. cycle cars	38
1,000 c.c. solo	48		

Final Examination (100).—At completion of the speed test, competitors will proceed to the foot of Brooklands test hill, stop, restart, and ascend the hill to the examination sheds. Marks will be deducted at the discretion of the judges if any vital part of engine, transmission, or frame is found broken, or if any undue wear or tear is discovered in the steering, valve tappets, cycle parts, controls, engine reciprocating parts, or crankshaft bearings.

Awards.

To obtain a gold medal, a competitor must not have lost more than 10% of the marks allotted him under each of the tests for reliability, hill-climbing, speed and final examination, and not more than 25% in the silence and brake tests.

Silver medals will be awarded to those who do not lose more than 20% and 50% respectively, and bronze medals 25% and 50% respectively.

Entries, which close at ordinary fees on Saturday next, the 8th, are limited to 150 competitors.

RACING ACROSS COUNTRY.

Durban to Johannesburg. South Africa's Biggest Motor Cycle Event. Four Hundred Miles of Veldt and Mountain. Two Day Race won by a British Machine.

THE most important and strenuous event in the South African motor cycle community is the annual race between the coast at Durban and the gold city, a distance of 396½ miles.

Except for the last 30 miles the whole distance is over typical Colonial roads with surfacing from vile to execrable, several small rivers and streams have to be driveu through or waded through, and many long and steep hills are included. Other than about three miles when passing through towns, the first 240 miles is continuously up and down, culminating in the ascent of Laings Nek at the side of the famous Majuba Mountain.

Starting on the outskirts of Durban, the road goes through Maritzburg (51 miles), Estcourt (111 miles), Ladysmith (150 miles), to Newcastle (212 miles), where the first night is spent, all machines being locked up in official control. The second day is via Charlestown (244 miles), Volksrust (248 miles), Standerton (300 miles), Balfour (350 miles), Heidelberg (366 miles) to the finishing point 4½ miles from Johannesburg Town Hall.

Historical.

First organised by the Rand M.C.C. in 1913, there were that year 66 entrants, of whom 20 finished; the same number survived the course out of 92 entries in 1914. The great war suspended activity until 1919 when but 13 finished, and the ratio of successes to entrants was worse in 1920, when eight men only qualified for prizes. The last two sets of figures indicate better than columns of description the tremendous difficulties of the course and the great physical strain on the drivers. In 1921 the number of finishers rose to 19.

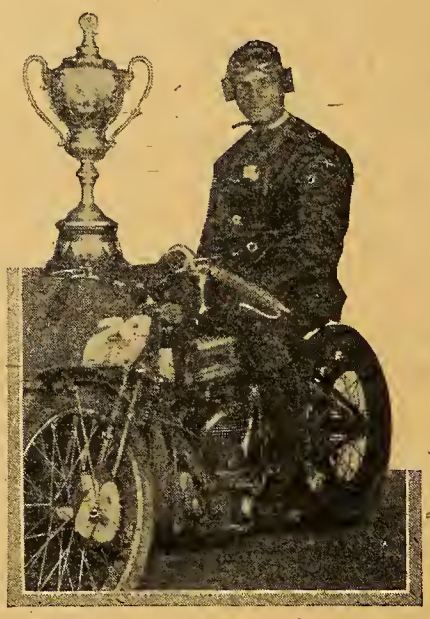
British riders will perhaps be able to obtain a better idea of road conditions in South Africa by a knowledge of the average speeds each year, start to finish, *i.e.*, total elapsed riding time. 1913 (554 c.c. Bradbury), 27.22 m.p.h.; 1914 (499 c.c. Rudge), 34.95 m.p.h.; 1919 (350 c.c. Douglas), 31.10 m.p.h.; 1920 (494 c.c. Douglas), 17.04 m.p.h.; 1921 (989 c.c. Harley-Davidson), 35.87 m.p.h. It will thus be seen that with nearly double the cubic capacity in 1921, but one more mile per hour average was obtained against the average of the winner in 1914.

Handicapping on Capacity.

The event has always been run on handicap terms arranged on a basis of engine capacity, and known performances of entrants. Such a system is not satisfactory, and some day it might be possible to divide the race into classes, each class starting level, but as there exists a perpetual floating trophy (which cost £125) for the annual winner, the better system is not yet favoured.

Organised Assistance.

The conditions under which the race is run have varied. In 1913 and 1914



C. H. Young (499 c.c. Triumph), winner of the Trophy in the 1922 Durban-Johannesburg race at an average speed of 39½ m.p.h. for nearly 400 miles of rough riding.

riders were prohibited from receiving assistance of any kind, and had to carry all spares and replacements with them. In 1919, 1920, and 1921, outside assistance was allowed and drivers could obtain spares anywhere. This year new parts, tyres, etc., were still procurable from anywhere, but outside assistance was prohibited, and all repairs had to be effected on the road. It is obvious that those trade firms with the longest pockets and best resources are able to secure advantages for riders of their machines that are not available to the small firms.

In addition to gold medals to the first five men, cash prizes are given, the winner taking £100, 2nd man £50, 3rd man £25, 4th man £15, 5th man £10, 6th man £5, 7th man £2 10s., and first unplaced novice £5. Further, all finishing inside two hours after the winner receive gold medals.

Enormous Organisations Involved.

The organisation is a huge task involving some four months' prior work; first to obtain official sanction—road racing is prohibited unless so sanctioned—and thereafter to fix up petrol stations, controls, and a small army of honorary officials. Drivers have a clear run through on the first day and part of the second day; when passing from Natal across the border into Transvaal, road gates are encountered to the number of 52, all of which should be opened and closed individually by each driver in strict compliance with the law. But to avoid this fearsome handicap each gate is guarded separately, and the guards, of course, have to be paid; three fast cars continuously patrol this section to make certain that all gates are kept open with guards ready to close them against straying cattle and sheep.

Police render assistance from end to end of the 396½ miles in respect of the few towns and villages passed through by keeping a clear course. So great is public interest that it is quite usual for parties to drive distances of 50 miles just to witness the occasional passage of a competitor. A public holiday being always selected for the last day, sporting Johannesburg turns out by the mass to be at the finishing line, or as near as is permitted; some 10,000 spectators were strung along the road this year for the last three miles.

The 1922 Event.

For 1922 the entries totalled exactly 50, made up of 40 from Johannesburg, 9 from Natal, and 1 from so far afield as Port Elizabeth, 800 miles away.

They may conveniently be summarised as follows: One 225 c.c. Velocette, one 225 c.c. Triumph, one 269 c.c. Sun, one 348 c.c. Hilda (local assembly), three 349 c.c. A.J.S., three 348 c.c. Douglas, one 490 c.c. Norton, one 495 c.c. Hilda, one 498 c.c. P. and M., one 499 c.c. Brough, one 499 c.c. Rudge, one 499 c.c. Dunelt, one 532 c.c. Scott, one 554 c.c. Bradbury, one 550 c.c. Sunbeam, two 492 c.c. Sunbeam, three 496 c.c. Douglas, one 770 c.c. B.S.A., three 557 c.c. B.S.A., three 499 c.c. Triumph, three 550 c.c. Triumph, one 596 c.c. Indian, six 998 c.c. Indian, two 998 c.c. Excelsior, and eight 989 c.c. Harley-Davidson. Handicap limit was 5h. 20m. for the Velocette down to five men on scratch.

Early Start on First Day.

In dull weather the limit man went off promptly at 7 a.m. on May 30th, the remainder following at five minutes' intervals in pairs, quite irrespective of handicaps, to enable the scratch men to reach Newcastle well before the afternoon; the correct adjustments were made next morning, so that the first man to finish would be the winner. The 54 miles to Maritzburg is possibly the most trying of the whole distance, well over 3,000 feet above sea level being climbed in 42 miles, dropping the next 12 miles to about 2,000 feet with numerous short steep hills abounding in acute turns. Out of 44 starters 42 were timed into Maritzburg between 8.45 a.m. and 3.23 p.m., Percy Flook (348 Douglas) reaching there in the van. Fastest net times were: Young (499 Triumph), 1h. 5m.; Long (998 Excelsior), 1h. 6m.; Thomas (492 Sunbeam), 1h. 9m.; P. Flook (348 Douglas), 1h. 11m.; Berry (550 Triumph), 1h. 11m.; Cohen (550 Triumph), 1h. 12m.; De Kok (998 Excelsior), 1h. 12m., for 54 miles.

Immediately outside Maritzburg is a five miles hill, most of the gradient 1

Racing Across Country.—

in 7 and 1 in 8, and the hitherto fair surface deteriorates, becoming very bad to Estcourt (111 miles). Best net times: Long, 2h. 32m.; Young 2h. 33m.; Hodgkinson (557 B.S.A.), 2h. 38m.; Cohen, 2h. 44m.; De Kok, 2h. 45m.; Berry, 2h. 47s.; Wilson (998 Indian), 2h. 47m.; Moulder (492 Sunbeam), 2h. 49m.; Thomas, 2h. 49m. On this section Loader (989 Harley) was run into by a passing car, fortunately without much damage to man or machine, and he was able to continue. Young had to stop and take out his back wheel, partly buckled by hitting big stones. Flook in his usual sporting spirit came to a dead stop when about to pass Young to see if he was hurt.

At Ladysmith (150 miles) the time-keepers booked through 37 men with best net times as follows: Borland (989 Harley), 3h. 33m.; Young, 3h. 36m.; Long, 3h. 40m.; Hodgkinson, 4h. 1m.; Moulder, 4h. 4m.; Murray (989 Harley), 4h. 4m.; Wilson, 4h. 6m.; P. Flook, 4h. 8m.; Thomas, 4h. 9m.

Boulders, Streams and Sand.

Ten miles outside Ladysmith came the worst stretch on the course up over the Biggarsberg range of hills—an outlying spur of the Drakensberg mountains—with several narrow streams to wade through all paved with rough boulders; at the summit was a long run down to Newcastle with at least 20 miles of continuous deep sand to negotiate. There were many mishaps hereabout, A. V. Baker (499 Triumph) skidding in the sand at high speed and badly hurting his shoulder, but he managed to ride in and then retired.

No fewer than 35 survived to Newcastle (212 miles), the eight best net times being Long (998 Excelsior), 5h. 28m.; Ressel (770 B.S.A. twin), 5h. 32m.; Young (499 Triumph), 5h. 50m.; Moulder (492 Sunbeam), 5h. 55m.; Murray (989 Harley), 5h. 59m.; Thomas (492 Sunbeam), 6h. 9m.; Van Bergen (490 Norton), 6h. 11m.; H. Scott (349 A.J.S.), 6h. 12m. All arrivals had some trouble, such as Long (broken saddle), Scott (broken handle-bar), Percy Flook (back wheel cones jammed), Zurcher (Douglas, chain snapped), Hildebrandt (burst tyre causing complete somersault), Loader (collision), etc.

Handicaps Operated on Second Day.

All arrivals the preceding afternoon re-started, but not one went off at the exact minute, every man spending time in adjustments or repairs after machines were released from the lock-up. H. Scott was timed off at 7.0 a.m., and the remainder according to the adjusted handicaps mentioned in earlier paragraphs. Long, one of the scratch men, had picked up so much on Scott that it seemed a foregone conclusion that, barring accidents, he must win. With 184 miles to cover Long had to reduce Scott by only 1h. 41m.; Young, the much fancied man on the first day, had a start of Long by but 38m. Moreover, the riders were now within easy distance of much better roads so far as concerned the big powered mounts.

For the first 30 miles out of Newcastle the route was amongst winding hills, criss-cross up and down with a final terror at Laings Nek, always inches carpeted in loose stones for the mile steep pitch that finishes the seven mile climb from Ingogo village, bringing the competitors to 5,500 feet above sea level, remaining approximately that height to the end across what is known as "high veld." Open rolling country much like the Wiltshire Downs in England is the characteristic feature; there is not a single steep hill, and although mostly of rough surface, the long straight stretches provide plenty of opportunity to those who thoroughly know the course.

Scott wasted little time. At Standerton, 96½ miles from the finish, the leaders and times of passing were: Scott, 9.39; Young, 10.10; Moulder, 10.15; Booth (Triumph Junior), 10.31, D. Scott (A.J.S.), 10.34; Cohen, 10.53; Dessels, 10.55; P. Flook 10.56; Long, 10.57. H. Scott was thus leading Young by 31 minutes, and the huge crowd at the half-mile level stretch at the finish were kept on the strain of interest by telephone messages giving the times at intervening points.

A Popular Win.

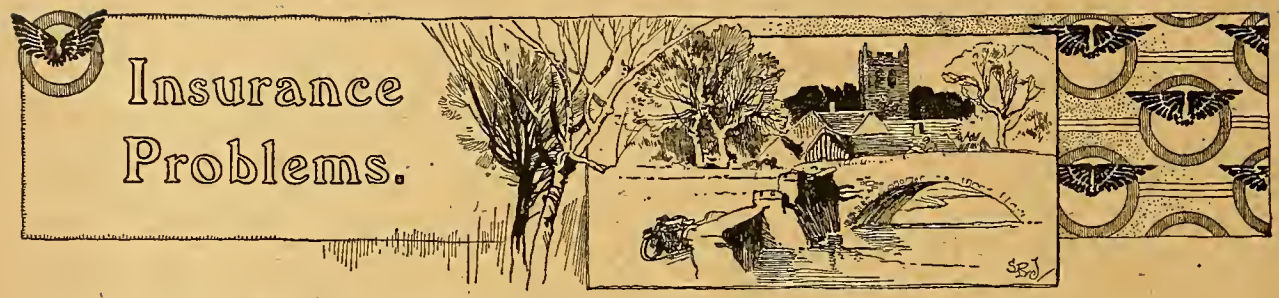
At Balfour, 41 miles to go, H. Scott held the lead by less than two minutes, and five miles further Young at last wrested the front position from Scott, and, riding his 499 c.c. Triumph all out along the last 27 miles of really good road, he was a popular winner, beating the race record created last year by the late Robert Blackburn. H. Scott (349 A.J.S.) followed 13 minutes later, so it will be realised that Young achieved a magnificent performance. Long (998 Excelsior) arrived at 1.3 p.m., 48 minutes after Young; when the full times were worked out it was seen that Long was the fastest in the race, and created a still better record, *viz.*, 9h. 46m. 23s., compared with Young's 10h. 1m. 32s.

In 1919, when the race was run in two days from Johannesburg to Durban, Young ran second to the winner (Percy Flook). He has only once previously been placed first in important events in South Africa, nearly always coming to grief with broken handle-bars, as was the case in 1919. He lives at Durban, and is a prominent member of the Natal M.C.C. H. Scott hails from Johannesburg; he gained fourth place in the 1919 race. A. Long is connected with the trade in Johannesburg, and it may be recalled that in 1920 and 1921, when a scratch sidecar race was run in conjunction with the "Schlesinger" trophy solo handicap events, he won on each occasion on an Excelsior, in 1920 by a bare five seconds, and in 1921 by twelve minutes, net time 11h. 26m. Results:

		Handicap. h. m.	Nett Time. h. m. s.
1.	C. H. Young (499 Triumph)	1 0	10 1 32
2.	H. Scott (349 A.J.S.) ..	2 25	11 37 50
3.	A. Long (998 Excelsior)	Scratch.	9 46 23
4.	T. Dessels (499 Rudge) ..	1 20	11 20 37
5.	L. Cohen (550 Triumph) ..	1 0	12 0 19
6.	V. Ressel (770 B.S.A.) ..	40	10 50 18
7.	L. Van Bergen (490 Norton)	1 20	11 35 36
8.	E. Murray (989 Harley)	Scratch.	10 20 0
9.	F. Zurcher (349 Douglas)	2 25	12 49 43
10.	P. Flook (348 Douglas) ..	2 25	12 55 51
11.	S. De Kok (998 Excelsior)	20	11 12 27
12.	J. Hodgkinson (557 B.S.A.)	1 0	11 57 31
13.	G. Kilroe (557 B.S.A.) ..	1 10	12 15 0
14.	D. Brink (268 A.J.S.) ..	3 40	15 1 3
15.	J. Booth (225 Triumph) ..	5 0	16 16 57
16.	W. Thomas (492 Sunbeam)	1 20	12 47 11
17.	T. Nicholl (998 Indian)	Scratch.	11 29 33
18.	W. Wilson (998 Indian)	Scratch.	11 46 42
19.	D. Scott (349 A.J.S.) ..	2 45	14 38 6
20.	G. Taylor (557 B.S.A.) ..	1 0	12 55 41

The team prize for first three machines of one make goes to the Triumph, *viz.*, Young 1, Cohen 5, Booth 15, total 21 points. In addition to above list, nine men finished inside the time limit of five hours after the winner. A protest has been raised against the second man, H. Scott, for taking his machine into a garage; the above placings after Young, therefore are subject to the result of investigation.

In past races C. H. Young has been dogged by a series of handle-bar breakages; this year he took the precaution of reinforcing the bars as indicated in this picture of successful rider and mount (right) along with J. R. Bery, another of the Triumph team.



A New Feature in which Insurance Questions are Answered and Discussed.

It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this new feature has been formed to deal impartially with the various problems that are presented to us.

The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enables "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.

Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.

Pillion Riding—Extra Charges.

Messrs. Saxessories, Coventry, writing on the subject of pillion riding insurance, consider that the extra charges for pillion riding are unfair. Their statement expresses the opinion of many of our readers, and although no definite question is asked, we publish it together with a comment as forming an interesting view on the subject. They say:

"We have contended for some time past that the 50% extra insurance for pillion riding is excessive, and more especially so when properly designed pillion seats are used.

"Pillion riding is practically as safe as solo riding, because greater care is exercised, but we can go a step farther and say this is correct if the pillion rider rides astride and is provided with hand grips and footrests. We consider these two essential to safety, as the pillion rider has then no inducement to clutch the driver under any circumstances, nor to upset the driver's balance by leg movement.

"We have recently asked all the tariff insurance companies to consider the question of a reduction of insurance premiums when pillion seats filling the above conditions are used, but so far without success.

"We can also confirm that non-tariff companies' premiums, including the extra for pillion riding, are in some cases less than tariff companies' basis premiums without pillion riding."

There can be no arguing the fact that pillion riding does provide an extra hazard from the insurance standpoint, and not the least contributory feature is that, an accident being imminent, the driver sees the circumstances in one way and the pillion rider in another. For example, there are passengers who in a tight corner suddenly decide that they are more competent to control the machine than the driver, and then act accordingly!

It is, of course, the aim of pillion seat makers so to devise the attachment that the risk is minimised as much as possible, and, having regard to the great favour which is shown towards pillion riding by the motor cyclist, it is to be hoped that such additional risk as is involved by pillion riding will eventually by these means be eliminated. Insurance companies will not be unsympathetic when that time arrives, but meanwhile, the position being what it is, it has to be faced accordingly.

The "Comprehensive Policy."

My motor cycle is insured under what is known as a "Comprehensive Policy," writes C. W. Brockton, of Hull, but occasionally I use a friend's cycle, and I should be glad to know, in the event of my friend's machine being involved in an accident whilst I am riding it, whether my policy would cover such damage as might arise.

Also, what would be my position under my policy in the event of a third party claim being made against me under the same conditions?

The answer to the first part of this question is in the negative, but the question has considerable value in that it brings to light the question of cover in respect of an "extra rider." Most motor cycle owners take out a policy covering only whilst the machine is being ridden by the owner, and whilst this is a condition likely to be maintained throughout the currency of the policy, there is always the danger of an accident arising when a friend is allowed to drive the machine.

This aspect should be borne strongly in mind by all prospective insurers, and "extra rider" cover obtained if necessary.

The second part of the question is answered in the affirmative. Most policies now indemnify the owner of an insured cycle whilst driving "any other private cycle not being his own property" against all third party risks.

It will be appreciated that this question has been answered without our enquirer's policy before us, and the reply is consequently based on the form of cover granted by the majority of companies.

SUMMARY.

In addition to the queries dealt with above, we have received a number of letters asking for advice, replies to which are given below:

H.J.H. (Canterbury).—The Licences and General Insurance Co. is a company which can be recommended.

A.G. (Sheffield).—The General Accident, Fire, and Life Insurance Co. handling the Tan-Sad policy is a reputable one and reasonable and prompt in settling claims.

E.S.K. (Merton).—Of the two companies named, the Motor Union is to be preferred.

C.J.J. (Southampton).—The question of the responsibility involved by allowing a friend to ride your machine is dealt with on this page.

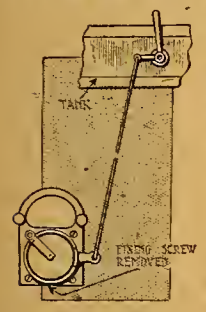
IDEAS: USEFUL AND INGENIOUS.

A Selection of our Readers' Home-made Gadgets, with some Practical Hints on Work in the Garage.

Converting Fixed to Variable Timing.

ON no type of engine is variable ignition more desirable than on a small two-stroke, yet many of the cheaper models were and some are still marketed, with magnetos having a fixed firing point.

A Belfast rider of a 211 c.c. Levis (single gear) made a change over from fixed to variable ignition quite easily in this wise: On examining the E.I.C. magneto he found that the contact breaker cam ring was of the standard type with a slot underneath, which would permit movement if the extra stop screw fitted in the magneto end plate to fix the timing was removed (the screw to remove is the left-hand side one, *i.e.*, the one which prevents the ring moving in the same direction as the armature revolves). From the makers of the machine a control lever, rod, and tank button for the lever were obtained for about five shillings; the button was sweated to the side of the petrol tank (not a job for novice tinsmiths, by the way!) The blank timing lever on the contact breaker was drilled to take the end of the rod and the parts assembled. It was found that in town riding the machine became much more controllable and permitted better climbing and acceleration—the latter an asset under some circumstances in Belfast!

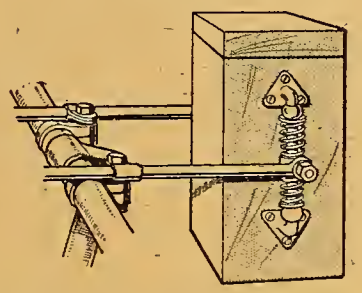


Method of fitting magneto control on a Levis.

Dual Lighting Arrangements.

WHEN the nights are so light that only occasional use is made of the lamp set, the advantages of electric equipment is undoubted. "H.W.C." (of Southampton) proposes a scheme whereby he retains the acetylene set for long distances and carries an accumulator for short about-town trips. A felt-lined wooden box houses the battery without shake, and this is carried on the generator bracket on the handle-bars. To minimise vibration spring mountings are provided; these are made up with small brass brackets, such as are obtainable at most furnishing ironmongers, two short rods, four springs, and two eye-bolts. The manner of their assembly is clearly shown in the sketch.

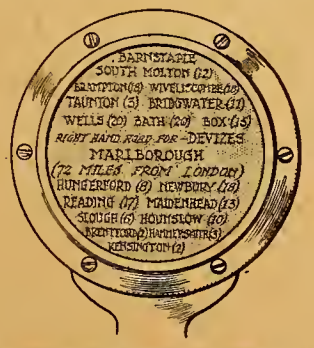
"H.W.C.'s" head lamp is fitted with a m.s.c. bulb-holder near the burner, but sufficiently below it to prevent the bulb being cracked by the heat of the gas flame; the acetylene generator is secured to the saddle tube. Both electric and acetylene tail lamps are carried.



Spring mounting of an accumulator box.

Compact Route Card Carrier.

THIS is not a competition route card carrier, but a little device used by Mr. M. Sykes, who recently had to journey from Barnstaple in Devon to London—a route with which he was unfamiliar. Not having a copy of *The Motor Cycle* Route Book (a serious omission) he obtained a route from a local lorry driver and inscribed this within a circle 3in. in diameter. This was fixed in a spare licence holder and secured on the handle-bars, and supplemented by sign-posts and calls to pedestrians in towns enabled a non-stop journey to be made.



Spare licence holder arranged as a route guide.

Substitute for Bowden Nipples.

HAVING broken some small tubular nipples in removing them from an old length of control wire, "E.A.M." of Coventry was at a loss for a method of refitting the wire until it occurred to him to bind the end with fine copper wire and solder it up. This tip is useful also in those cases when it is difficult to persuade a frayed or thick wire to pass through the hole of an ordinary nipple.

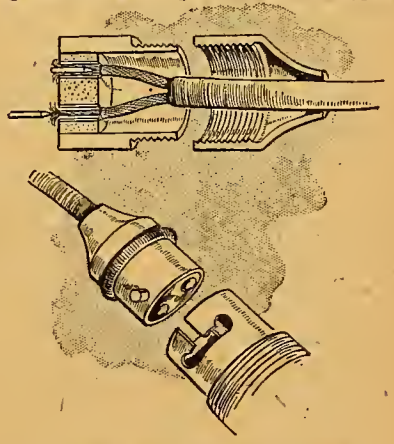
Electric Lighting Tips.

At this season people mostly forget their lighting sets, but it is a good plan to make alterations or new installations while the light is good rather than to leave such work for the darker evenings of autumn.

In the matter of fitting wires into bulb-holders, etc., words of wisdom are forwarded by F.E.D.H. of Dorking; he says:—

"The plugs used in many electric lighting sets have no provision for gripping the wire leads in the two brass terminal tubes. The wires may be soldered in, but an equally strong and much simpler method is to use gramophone needles. The needles are simply pushed in, the wires being thinned out or doubled until the needle fits really tight and flush with contact surface. The ends of the wires are then trimmed off."

A further suggestion from the same reader is that switches may be dispensed with altogether; bayonet catch joints are used. The L-shaped slot is converted into a T shape, the new arm being made slightly longer than the existing arm. A 90° turn of the plug switches the light on or off. Any lamp can be used alone, complicated wiring is avoided, and current can be economised. The slot is most easily made by drilling a hole and finishing with a small file.



Two useful hints for electrical fittings.

YORKSHIRE SPEED CHAMPIONSHIPS.

25-Mile Races on Saltburn Sands. Well-attended Event of Middlesbro' & District M.C.C.

EXCELLENT racing rewarded thousands of spectators at Saturday's speed trials on Saltburn Sands, arranged by the Middlesbrough and District M.C. on behalf of the Yorkshire Centre A.C.U.

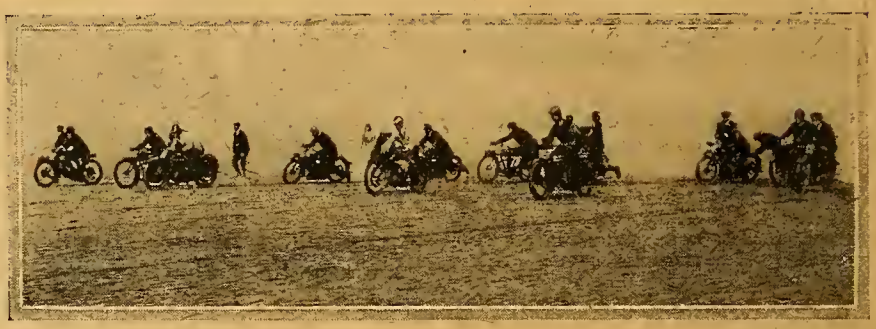
Three twenty-mile Yorkshire Championship races—for solo machines not exceeding 350 c.c., 600 c.c., and 1,000 c.c.—were naturally regarded as of first importance, but the many shorter distance events provided an equal amount of excitement.

Of last year's champions only F. W. Dixon (989 Harley-Davidson) was able to retain his title, the 1922 winners in the other classes being G. S. Boston (349 A.J.S.) and C. P. Wood (486 Scott Squirrel). Incidentally there were only three starters, all on Harley-Davidsons, in the 1,000 c.c. class.

The track was in poor condition and was very loose in parts, especially towards the finish. Several spills occurred, but apparently the only serious one was that of Mrs. M. C. Jennison, of Hull, the Velocette rider, who got up a speed wobble just before the finishing line and fell. Her crash helmet saved her life, for, as far as could be traced by the doctor on the course, she escaped with slight concussion, a badly lacerated jaw, and shock.

Short Radius Cornering.

The course was a mile long, with the outward and home tracks on opposite sides of the enclosure, making the turns at the end of each mile to have a radius of about 30 yards, which many men found quite insufficient to get round in, and many cases were witnessed of a man having a lead of 50 yards and more to the corner, then losing it through taking the corner too fast and very wide. Frank Dixon was one of these, while his better-known brother was "slower" but cut in very close.



Start of the 20 mile Yorkshire Championship for machines up to 600 c.c., which was won with some ease by C. P. Wood (486 c.c. Scott Squirrel).

The steadiest rider all round the course was C. P. Wood. He just sat low on his Scott as if he and the machine were carved out of stone and droned round the course like a big bee.

In the early events he seemed content to let Langman lead, but in the 20-mile Championship he set out to win, and the result was never in doubt; he shot past the post easily first in 23 mins. 28 3-5 secs., which, considering the 19 corners and 10 crossings of a watersplash, was a fine performance. His speed works out at 51 m.p.h.

When he won the equivalent 350 c.c. event G. S. Boston (349 A.J.S.) was only 16 3-5 secs. slower than Wood.

Generally speaking, the honours of the day were shared by Dixon and Wood, the former finishing so far ahead in the four miles unlimited sidecar event that he was able to park his outfit and become a spectator before the second man arrived!

Other riders to show up well included F. Reynard (Monopole), R. W. Loughton (Francis Barnett), H. Langman (Scott Squirrel), R. T. Cawthorne (Norton), F. Shepherd (Sheffield Henderson), and J. Joynson (Invicta).

The trials, which started about 1.30 p.m., did not finish until nearly 8 p.m., when the tide asserted its prior rights; but despite this a large portion of the crowd stayed throughout the whole programme.

HILL CLIMB IN EAST SOUTH WALES.

Open Event of the East South Wales Centre A.C.U. near Newport marred by Rain.

IT must have been disappointing to the organisers of an open hill-climb to have to run off this most popular event under such appalling weather conditions as were experienced at Catsash on Saturday last.

Indeed, so miserable was the state of the weather that it was fully thought that the event would surely be run off minus spectators.

However, these trials were not going to take place even during a deluge and be missed by the enthusiastic admirers of the sport in East South Wales.

Last year's successful meeting was too well remembered to deter these enthusiasts from attending, and to the surprise of the organisers the event, or, as aptly described by Mr. Ebblewhite, "the regatta," was witnessed by quite large numbers, who appeared to enjoy themselves thoroughly.

It must be borne in mind that South Wales to-day can boast of riders of no mean ability, whose performances are of sufficient merit to warrant a successful meeting, although, of course, the inclusion in the entries of that "wizard of the wheel," viz., George Dance, added greatly to the already interesting list of entries, which, by the way, was a record.

Unfortunately, after a few exhibitions of his wonderful skill (his "get aways" reminded one of the shooting of a rocket), Dance had the misfortune, immediately on the conclusion of Event 13, to miss his brake pedal, with the result that both rider and machine shot over a low bank, through a hedge, and landed in a cottage garden the other side.

He was taken to hospital, but, as officially announced later, was found to have escaped serious injury, no bones being broken, although he was badly shaken and had several bruises and nasty cuts about the face. He was, however, able to proceed later to Wolverhampton.

High Speeds Through the Rain.

Undoubtedly, had the Clerk of the Weather been a little more considerate some remarkable times would have been recorded, for riders and machines appeared to be in excellent fettle. As it was, the times put up by competitors were really excellent considering that practically every event was run in pouring rain, riders' faces being so bespattered by mud that it was remarkable they were able to see at all.

The organisation of the event was so good that it would be hard to find better than that witnessed on Saturday.

RESULTS

EVENT 7 (OPEN), UP TO 350 C.C.:
G. Dance (349 Sunbeam), 34½s.
C. Sgonina (349 A.J.S.), 36½s.
S. Tucker (346 New Imperial), 37½s.

EVENT 8 (MEMBERS), DITTO:
W. L. J. Davies (349 Cotton), 33s.
C. Sgonina (349 A.J.S.), 35½s.
F. J. Boshier Jones (349 A.J.S.), 39½s.

EVENT 9 (NOVICE MEMBERS), DITTO:
A. Bethell (349 Sheffield-Henderson), 38½s.
W. T. Timmins (349 Cotton), 47½s.
J. M. Marks (349 Douglas), 50½s.

EVENT 10 (OPEN), UP TO 500 C.C.:
G. Dance (499 Sunbeam), 29s.
C. Sgonina (498 Sgonina Special), 32½s.
J. Parker (492 Sunbeam), 33½s.

EVENT 11 (MEMBERS), DITTO:
I. Parker (492 Sunbeam), 33s.
V. Austice (494 Douglas), 33½s.
R. E. Eveson (490 Norton), 34½s.

Victor Anstice (494 c.c. Douglas) and B. J. Millard (492 c.c. Sunbeam) waiting in the rain for the signal to start.

EVENT 12 (NOVICE MEMBERS), DITTO:
M. R. Davies (499 Sunbeam), 35⅕s.
J. O. Parry (499 Sunbeam), 37⅕s.
S. H. Richards (494 Douglas), 38⅗s.

EVENT 13 (OPEN), UP TO 750 C.C.:
G. Dance (499 Sunbeam), 29⅖s.
I. Parker (492 Sunbeam), 33⅕s.
V. Anstice (494 Douglas), 33⅗s.

EVENT 14 (MEMBERS), DITTO:
I. Parker (492 Sunbeam), 33⅖s.
V. Anstice (494 Douglas), 33⅘s.
W. L. Davies (398 A.B.C.), 33⅕s.

EVENT 15 (NOVICE MEMBERS), DITTO:
M. R. Davies (499 Sunbeam), 35⅖s.
A. Bethell (349 Sheffield-Henderson), 37⅗s.
J. O. Parry (499 Sunbeam), 38⅗s.

EVENT 16 (OPEN), UNLIMITED:
G. W. Walker (490 Norton), 30⅖s.
I. Parker (492 Sunbeam), 33s.
V. Anstice (494 Douglas), 33⅕s.

EVENT 17 (MEMBERS), DITTO:
H. Davies (976 Brough Superior), 33s.
I. Parker (492 Sunbeam), 33⅖s.
V. Anstice (494 Douglas), 34⅕s.

EVENT 18 (NOVICE MEMBERS), DITTO:
A. Bethell (349 Sheffield-Henderson), 38⅗s.
J. O. Parry (499 Douglas), 39s.
M. R. Davies (346 New Imperial), 43s.

EVENT 4 (OPEN), P TO 300 C.C.:
W. L. J. Davies (249 Diamond), 40s.
H. Harris (249 New Imperial), 41s.
H. Church (249 Velocette), 41⅖s.

EVENT 5 (MEMBERS), DITTO:
W. L. J. Davies (249 Diamond), 40s.
H. Harris (249 New Imperial), 41⅗s.
M. R. Davies (249 New Imperial, 42⅖s.

EVENT 22 (OPEN), SIDECARS, UP TO 500 C.C.:
C. Sgonina (498 Sgonina Special), 35⅗s.
G. W. Walker (490 Norton sc.), 38⅕s.
S. L. Bailey (494 Douglas sc.), 43s.

EVENT 23 (MEMBERS), DITTO:
C. Sgonina (498 Sgonina Special sc.), 35⅕s.
W. L. J. Davies (349 Cotton sc.), 40s.
J. Marsh (499 Sunbeam sc.), 40⅖s.

EVENT 25 (OPEN), SIDECARS, UP TO 750 C.C.:
C. Sgonina (498 Sgonina Special sc.), 36⅕s.
S. L. Bailey (494 Douglas sc.), 39s.

EVENT 26 (MEMBERS), DITTO:
C. Sgonina (498 Sgonina Special sc.), 36⅕s.
S. L. Bailey (494 Douglas sc.), 38⅕s.
J. Marsh (499 Sunbeam sc.), 39⅕s.

EVENT 28 (OPEN), SIDECARS, UNLIMITED:
G. W. Walker (490 Norton sc.), 35⅗s.
C. Sgonina (498 Sgonina Special sc.), 37s.
S. L. Bailey (494 Douglas sc.), 38⅗s.

EVENT 29 (MEMBERS), DITTO:
C. Sgonina (498 Sgonina Special sc.), 37s.
G. W. Walker (490 Norton sc.), 37⅖s.
S. L. Bailey (494 Douglas sc.), 38⅗s.

EVENT 30 (NOVICE MEMBERS), DITTO:
W. H. Leman (978 B.A.T. sc.), 53⅘s.
E. J. L. Strong (989 Harley-Davidson sc.), 75s.

HIGH SPEEDS AT ANGEL BANK.

Rain Spoils Sutton Coldfield and North Birmingham Club's Hill-climb.

OWING to police restrictions the Sutton Coldfield and North Birmingham Automobile Club were forced to travel far afield to find a suitable spot for the first Midland Centre hill climb.

The hill finally selected was Angel Bank, near Cleobury Mortimer—a main road with a fine surface, and a maximum gradient of about 1 in 10. Though eminently suitable for a hill climb in most respects, it suffered from the disadvantage of having branch roads near the foot from which slow traffic emerged and held up the climb on several occasions.

These delays and a dull afternoon which later turned to heavy rain, rendered the event somewhat dreary.

Delays Due to Traffic.

In spite of the efforts of the organisers, combined with the untiring zeal of a very sporting police sergeant, and his subordinates, only 11 ascents were accomplished in the first sixty-five minutes. As a result of this it was decided that after the sidecar classes each man should only have one run at the hill, his time to stand for each class in which he was entered. This decision caused some grumbling.

A glance around the competing machines at the foot of the measured half-mile revealed one or two interesting features. H. W. Hassall rode an o.h.v. Norton, on which he acomplished the fastest time of the day (28 2-5sec.), beating George Brough, who was mounted on an experimental Brough Superior with the latest 976 c.c. J.A.P. side-by-side valve engine, having a very neat ribbed exhaust elbow on the rear cylinder, and a modified frame, by only 2-5sec. G. E. Cowley's 349 c.c. A.J.S. was of the 1921 T.T. o.h.v. type, though he was beaten on time by A. E. Phillips on a side-by-side valve sports model of the same make.

Star Performers.

Outstanding performances were few and far between, but those of H. W. Hassall (490 Norton), G. Brough (976 Brough Superior), F. Sisson (490 Norton), F. T. Hatton (494 and 749 Douglas), W. L. Handley (292 O.K. Junior), and W. S. Hawcatt (247 Levis), are worthy of special notice. Sidecar classes attracted no more than three entries in any one class (classes 1 and 2 were unsupported, and, therefore, abandoned). In Class 3, for sidecars up to 600 c.c. (open), F. Sisson (490 Norton) took the hill in fine style in 37 1-5s., easily beating the only other competitor, F. A. Watson (550 Sunbeam sc.), whose time was 52 2-5s.

Class 4, a similar event of private owners produced three entries: F. Sisson (490 Norton sc.), 36 4-5s.; V. H. Smith (490 Norton sc.), 47s.; F. A. Watson (550 Sunbeam sc.), 52 3-5s.

Class 5.—Sidecars, unlimited, open: F. Sisson (490 Norton sc.), 36 2-5s.; F. T. Hatton (749 Douglas sc.), 38s.

Class 6.—Sidecars unlimited, private owners: F. Sisson (490 Norton sc.), 36 1-5s.; V. H. Smith (490 Norton sc.), 44 4-5s.; F. A. Watson (550 Sunbeam sc.), 50 2-5s.

In Class 7 solos up to 250 c.c., open, Hawcatt (247 Levis) opened the event, and subsequently proved the winner. Next on time came another Levis, ridden by A. R. Edwards. Results:—W. S. Hawcatt (247 Levis), 38 1-5s.; A. R. Edwards (247 Levis), 44 2-5s.; R. C. Bennett (249 Federation), 48 2-5s.

Since practically all the entrants in Classes 8 and 9 had previously ascended the hill, they produced only one performance of interest, that of W. L. Handley, who made a magnificent climb on his 292 c.c. O.K. Junior. Class 8.—Solos up to 250 c.c., private owners:—(1) A. R. Edwards (247 Levis), 44 2-5s.; (2) R. C. Bennett (249 Federation), 48 2-5s.

Class 9.—Solos up to 350 c.c. Open:—W. L. Handley (292 O.K. Junior), 32 2-5s.; W. S. Hawcatt (247 Levis), 38 1-5s.; A. R. Edwards (247 Levis), 44 2-5s.

High Speeds at Angel Bank.—

Class 10.—Solos up to 350 c.c. Private owners :—(1) A. E. Phillips (349 A.J.S.), 42 2-5s.; (2) A. R. Edwards (247 Levis), 44 2-5s.; (3) G. E. Cowley (349 A.J.S.), 46 3-5s.

Class 11.—Solos up to 500 c.c. Open :—(1) W. H. Hassall (490 Norton), 28 2-5s. (fastest time of the day); (2) F. Sissons (490 Norton), 30s.; (3) F. Hatton (490 Douglas), 30 4-5s.

More high speeds were put up in Class 12, up to 500 c.c., for private owners, but nothing to lower the existing records. (1) F. Sisson (490 Norton), 30s.; (2) F. J. Adam (490 Norton), 32s.; (3) J. S. Bacon (499 Sunbeam), 33 4-5s.

Classes 13, 14, 15 and 16 produced only four fresh starters, and of these Hatton's 749 c.c. Douglas, and George Brough's 976 c.c. Brough Superior made very fine ascents.

Class 13.—Solos up to 750 c.c., open :—(1) H. W. Hassall (490 Norton), 28 2-5s.; (2) F. T. Hatton (749 Douglas), 29 3-5s.; (3) F. Sisson (490 Norton), 30s.

Class 14.—Solos up to 750 c.c. Private owners. Results as in Class 12.

Class 15.—Solos unlimited. Open :—(1) W. H. Hassall (490 Norton), 28 2-5s.; (2) G. Brough (976 Brough Superior), 28 4-5s.; (3) F. T. Hatton (749 Douglas), 29 3-5s.

Class 16.—Solos unlimited. Private owners :—(1) G. Brough (976 Brough Superior), 28 4-5s.; (2) F. Sisson (490 Norton), 30s.; (3) F. T. Adam (490 Norton), 32s.

Class 17 for cycle cars and light cars up to 1,100 c.c., open, produced three entries, H. F. S. Morgan winning very comfortably on time. (1) H. F. S. Morgan (976 Morgan), 50 2-5s.; (2) N. Norris (976 Morgan), 1m. 6 2-5s.; (3) F. H. Burcher (7 h.p. Wolseley), 1m. 58 2-5s.

Class 18, a similar event for private owners, produced only one entry, C. A. Potts (G.N. cycle car), who "walked over" in 1m. 12 2-5s.

Timing was carried out by telephone, and the officials worked hard under unfavourable circumstances. During the first few classes times were displayed on an official car, which traversed the hill between each class, but later, owing to rain and the difficulty of sorting out winners from previous classes, the practice became less regular. The results above are provisional, and special awards will be announced later.

TRAINS TO THE GRAND PRIX.

ALREADY there is a goodly number of motorists who will be journeying over to Strasbourg to witness the Grand Prix Race on Wednesday next; therefore the following train times, which the South Eastern and Chatham Railway have supplied, will be useful.

Passengers can leave London by the 8 p.m. service from Victoria, arriving in Paris at 5.25 a.m. the following morning, or if they wish to spend a night in Paris they can leave at 11 a.m. or 2 p.m., reaching Paris at 6.35 p.m. and 9.40 p.m. respectively. Return arrangements from Paris allow passengers making the 8.40 a.m. connection from the Gare du Nord to arrive in London at 3.55 p.m.

Visitors going from London on Sunday next (July 9) leave Victoria at 9.15 a.m.; arrive Gare du Nord, Paris, 4.35 p.m. Leave Gare de l'Est, Paris, at 5 p.m.; arrive Strasbourg at 12.29 a.m. (midnight).

The ordinary return ticket from London to Strasbourg via Ostend and Brussels is £9 9s. 2d. (first class) and £6 7s. 4d. (second class).

Accommodation is already said to be at a premium in the Strasbourg district.

CLUB NEWS.

Week-End Club Events.

July 8th.—North Western Centre A.C.U.—Speed Trials at Southport.
July 8th.—S.E. Centre A.C.U.—Reliability Trial.
July 8th.—North Wales M.C.C.—Week-end Tour.
July 8th.—Liverpool M.C.—Speed Trial.
July 8th.—Bristol M.C. and L.C.C. and Bath M.C.C.—Inter-club Trial.
July 8th.—Dumfries and District M.C.C.—One-day Reliability Trial for Irving Cup.
July 8th.—Bradford M.C.C.—Hill Climb.
July 8th.—Coventry Triangle M.C.—Run to Kenilworth.
July 8th.—Cumberland M.C.C.—Hill Climb.
July 8th.—Coventry and Warwickshire M.C.—One-day Trial.
July 8th.—Exeter M.C. and J.C.C.—Trial over Dartmoor for "Ford" Shield.
July 9th.—Coventry Triangle M.C.—Run to Stratford-on-Avon.
July 9th.—Bradford M.C.C.—Speed Trials.
July 9th.—York and District M.C.—Run.
July 9th.—Leeds Motor Union.—Run to Morecambe via Skipton.
July 9th.—Bridgnorth and District M.C.C.—Reliability Trial.
July 9th.—Sheffield M.C.C.—Run to Hayton (Ladies' Fishing Match).
July 9th.—Colne and District M.C.—Run to Bolton-by-Bowland.
July 9th.—Macclesfield and District M.C.—Reliability Run.
July 9th.—East London M.C.C.—Run to Mooiplaats.
July 9th.—Kelso and District M.C.C.—Social Run.
July 9th.—Newcastle and Northern M.C.C.—Picnic Run to Carter Bar.
July 12th. Leeds Motor Union.—Impromptu Run from City Square.
July 12th.—York and District M.C.C.—York Show.
July 12th.—Exeter M.C. and J.C.C.—Tiverton Inter-club Trial.
July 12th.—Reigate, Redhill and District M.C.C.—Reliability Trial.
July 13th.—Bulwell M.C.—Run to Shelford and East Bridgford.

Sheffield University M.C. and L.C.C.

A reliability trial was held to Scarborough and back recently, when the following awards were made: The Boothroyd Gold Medal, W. F. Castle (398 A.B.C.); special silver medal for carrying on in spite of difficulties, H. Woffenden (269 Royal Ruby); silver medals, G. F. Shama (499 Sunbeam), S. Newsom (499 Sunbeam), J. O. Schofield (269 Chater-Lea), D. A. Gratton (8 Talbot), and C. F. Boothroyd (8 Rover).

Essex M.C.

The annual club race meeting will be held this year on Saturday, July 22nd, at Brooklands, commencing at 2.30 p.m. The motor cycle races will be run in addition to six car races, and entries for the various events close at 5 p.m. on Thursday next, July 13th. All races are open to members of the club and members of the B.M.C.R.C. Further particulars and entry forms may be obtained from Mr. A. G. Reynolds, 95, Fillebrook Road, Leytonstone, E.

Bristol M.C. and L.C.C.

A well-organised programme suffered to a certain extent at the hands of the weather at the Clifton Zoo Gardens. Each event was, however, well supported. The results were as follows: Musical chairs for sidecars, 1, Miss Chidney (499 Wilkin sc.); 2, Miss Baxter (490 Norton sc.); sole, 1, O. Hopkins (499 Triumph), Tilting the ring, 1, F. Wiltshire (499 Rudge); 2, A. Dashfield (349 A.J.S.). Distance judging, 1, K. Woods (499 Wilkin); 2, H. T. Scamp (8 Morgan). Bun-biting, 1, E. G. Fery (G.N. cycle car); 2, C. W. Rankin (G.N. cycle car). Kicking the football, 1, K. Woods (499 Wilkin); 2, L. Smith (481 Scott-Squirrel). Riding the plank, 1, L. Smith (481 Scott-Squirrel). Slow race, 1, A. Dyer (348 Douglas).

Bradford M.C. and L.C.C.

The annual hill-climb for the "Dyson" shield will be held on Saturday, July 8th, at Tong Hill, commencing at 2.30 p.m. There will be classes for solo machines, sidecars, and cars. Entries (3s. 6d. each vehicle) should be sent to Mr. S. Haigh, Holme Bank, Cleckheaton. Speed trials will take place on the following day, July 9th, over a course measuring 586 yards, 2 feet, all flying start, and electric timing will be employed. Entries at the same fee as the hill-climb should be sent to Mr. A. R. Naylor, Beamsley Road, Frizingball, Bradford.

A general meeting of club members is being held this evening, July 6th, at 8 p.m., at Belle Vue Hotel, Bradford. The Bradford-London-Bradford run is to take place this year on July 29th-30th, full particulars of which are obtainable from Mr. T. G. Bullus (Tel. 4779 Bradford).

Honiton M.C. and J.C.C.

The opening test run held recently in connection with this club proved successful, the course including Marlpits Hill, a gradient of 1 in 5, across Farway Common. Considerable public interest was displayed in the event.

Ipswich and District M.C.C.

With regard to the joint speed trials which are being held between this club, the Norfolk M.C. and L.C.C., the Colchester and District M.C.C., and the Bury and District M.C.C., on Saturday, July 15th, full particulars are available from Mr. G. Bird, "Sandhurst," Friars Rd., Ipswich.

Harringay M.T.C.

This touring club, which was only formed this year, is proving successful. A number of useful runs have already been undertaken, and several events are at present being organised for the near future. Motor cyclists desirous of becoming members should apply to the hon. sec., Mr. E. T. Hepworth, at 4, Etherley Rd., Harringay, N.15.

Weston-super-Mare and District M.C.C.

The first reliability trial took place on June 24th, over a 76 mile course, starting from Weston-super-Mare at 2.30 p.m., and finishing at Saltford for tea. Owing to heavy rain, the going was difficult, and few awards were made. The winners of gold medals were W. Payne (490 Norton sc.) and J. Prnen (595 Douglas sc.). Silver medals, G. Fry (A.C. car) and J. Passey (G.N.).

Oxford M.C.

Of the eighteen starters in the map reading and reliability trial held recently in the Chiltern Hills, two only covered the entire course. Of these, L. A. Welch (292 O.K. Junior sc.) lost the way when nearing the finish, and checked in too late to qualify for an award, while a car competitor arrived in to time, but descended Whiteleaf Hill when he should have been climbing it. Thus no competitor qualified for an award.

Surrey M.C. and L.C.C.

The annual reliability trial from Guildford to Exeter and back took place on June 24th, when varied weather conditions were encountered. Five competitors made non-stop runs, and were within the margin of one minute allowed at all control points. The results, subject to confirmation by the committee, are: (1) T. H. Broadhurst (499 Sunbeam), Swain and Jones cup and gold medal; (2) H. C. Mansell (349 A.J.S.), silver medal; (3) C. J. Feeney (346 Francis-Barnett), bronze medal; (4) C. B. I'Anson (498 Zenith-Bradshaw), bronze medal; (5) L. J. Mitchell (G.N.), bronze medal and Feeney cup. Other bronze medallists were G. W. Relph (799 A.J.S. sc.), and Miss Bawers (550 Trinmph sc.). The speed trials arranged for July 15th have been cancelled, and a members' hill-climb substituted, the results of which will count in the aggregate marking for the Wilson challenge cup (four-wheeled cycle cars only).

Loughborough and District M.C.C.

The trial for the Will Chapman cup has been arranged to take place on July 16th over a course in the Charnwood Forest district. Full particulars of this event may be obtained from the hon. sec., Mr. C. R. Topping, at 64, Frederick Street, Loughborough.

Stamford M.C.C.

The speed trials held on Saturday, June 24th, over a half-mile course resulted in the following times being made in the various classes:—250 c.c. standing start (2 strokes only): (1) S. Sharpe (211 Levis), 46s.; (2) G. Faucourt (211 Levis), 47⅗s. Flying start: (1) S. Sharpe (211 Levis), 34⅖s.; (2) G. Faucourt (211 Levis), 36⅕s. 350 c.c. standing start: (1) E. W. Greenwood (349 A.J.S.), 36⅘s.; (2) J. North (225 Royal Ruby), 37s. Flying start: (1) J. North (225 Royal Ruby), 29s.; (2) E. W. Greenwood (349 A.J.S.), 29⅗s. 500 c.c. standing start: (1) O. F. Collier (499 Sunbeam), 32⅓s.; (2) W. Martin (499 Sunbeam), 32⅗s. Flying start: (1) A. J. Bosworth (496 Brough), 23½s. 750 c.c. standing start: (1) W. Martin (499 Sunbeam), 33s.; (2) A. J. Bosworth (496 Brough), 33⅓s. Flying start: (1) A. J. Bosworth (496 Brough), 24s.; (2) O. F. Collier (499 Sunbeam), 24⅓s.

Worcester and District M.C.C.

The third annual speed trials were held in conjunction with the Worcester M.C. on June 22nd, at Madresfield, Malvern. The trials took place over a measured half-mile of a mile long speedway lent by the Earl Beauchamp, K.G. A quarter of a mile was allowed for the flying start. Over 1,000 spectators were present, and fifty entries were received. Premier awards were the A.J.S. and the S.T.D. cups for the fastest motor cycle and car respectively, with first and second awards in each class. Results:

A.J.S. CUP: H. W. Hassell (490 Norton), 23s.

S.T.D. CUP: R. Mays (Bugatti), 25⅘s.

CLASS 1 (275 c.c.).—Expert: (1) W. L. Handley (249 O.K.), 28⅘s.; (2) B. Kershaw (249 New Imperial-Jap), 29⅘s. General: (1) W. L. Handley (249 O.K.), 28⅘s.; (2) O. Hayes (249 New Imperial-Jap), 31⅘s.

CLASS 2 (350 c.c.).—Expert: (1) W. L. Handley (249 O.K.), 26⅘s.; (2) E. Williams (349 A.J.S.), 28⅘s. General: (1) W. L. Handley (249 O.K.), 26⅘s.; (2) H. A. Bleckley (349 Sheffield-Henderson).

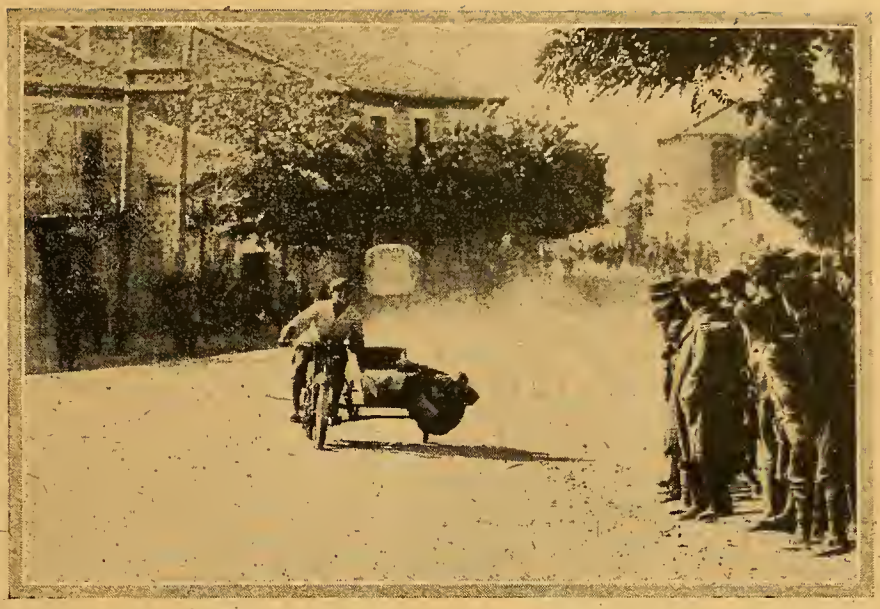
CLASS 3 (500 c.c.).—Expert: (1) H. W. Hassell (490 Norton), 23s.; (2) A. S. Bochler (494 Douglas), 23⅘s. General: (1) R. E. Eveson (490 Norton), 26⅘s.; (2) W. L. Handley (249 O.K.), 26⅘s.

CLASS 4 (750 c.c.).—Expert: (1) H. W. Hassell (490 Norton), 23s.; (2) S. Kochley (494 Douglas), 23⅘s. General: (1) R. E. Eveson (490 Norton), 23⅘s.; (2) W. L. Handley (249 O.K.), 26⅘s.

CLASS 5 (Unlimited c.c.).—Expert: (1) H. W. Hassell (490 Norton), 23s.; (2) A. S. Kochler (494 Douglas), 23⅘s. General: (1) R. E. Eveson (490 Norton) 26⅘s.; (2) W. L. Handley (249 O.K.) and C. Lewis (976 Zenith), 26⅘s.

SIDECAR CLASS (500 c.c.).—Expert: (1) R. Brown (499 Sunbeam sc.), 29½s.; (2) R. E. Eveson (490 Norton sc.), 31½s. General: (1) R. E. Eveson (490 Norton sc.), 31½s.; (2) W. B. Gibbs (494 Douglas), 33s.

SIDECAR CLASS (750 c.c.).—Expert: (1) R. Brown (499 Sunbeam sc.), 29½s.; (2) R. Brown (499 Sunbeam sc.), 29½s. This rider also won the general class in the same time.



ACROBATICS ON THE ROAD. Cornering with a sidecar at speed. Observe the position of the passenger to keep the wheel on the ground. An incident in the 12 hour motor races at Madrid.

Reigate, Redhill, and District M.C.C.

A petrol consumption test was held on June 25th with the following results. Solo class: 1, E. C. Gordon (499 o.h.v. Triumph); 2, G. W. Faulkner (499 Blackburoe). Sidecar class: 1, E. P. Duplock (976 Sunbeam sc.); 2, V. F. Long (976 Excelsior).

Macclesfield and District M.C.

July 9th has been chosen for the holding of the reliability run. Competitors will meet at Log Lane, Chester Road, Jordangate, at 1.30 p.m., and the course will measure approximately seventy miles, finishing at Harding's Farm, Kerridge. This event is open to all members of the Cheshire Centre A.C.U.

Exeter M.C. and J.C.C.

Members took part in a holiday camp during a recent week end at Newbridge, Holne Chase, near Ashburton. Twenty riders assembled at the rendezvous on Saturday, and twelve more followed on the next day. Despite a fair amount of rain, the enterprise proved a great success, and it is proposed to organise an event of a similar nature during August.

Bolton and District M.C.

A hill-climb has been arranged to take place on Wednesday, July 12th, over a private road situated on the outskirts of Bolton with a gradient of 1 in 12, an excellent surface, and measuring threequarters of a mile in length. Competitors assemble at 5.45 p.m. in Town Hall Square, Bolton. Entry forms, which may be obtained from Mr. H. Ward, 114, Dorset St., Bolton, must be returned by Saturday, July 8th.

Harrogate and District M.C.

The annual reliability trial for the "Muratti Trophy" was held on June 25th in heavy rain, which made the course very difficult. The results were as follows: 1, A. Baines (498 Zenith-Bradshaw), lost 14 marks; 2, T. F. Leak (349 Massey-Arran), lost 21 marks; 3, R. Eastwood (498 Zenith-Bradshaw), lost 36 marks. Sidecar machines: 1, W. Wells (499 Sunbeam sc.), lost 59 marks; 2, G. Appleyard (799 A.J.S. sc.), lost 94 marks. Several other riders finished, and the "Trophy" was awarded to A. Baines (498 Zenith-Bradshaw).

Northampton M.C.C.

The results of the recent 100 miles reliability trial are as follows: Silver trophy for the best performance of the day, J. B. Berry (499 o.h.v. Triumph). 250 c.c. Class: Silver medal, D. Coldham (225 Royal Enfield Sports). Unlimited c.c. Solo Class: Silver medals, J. B. Merry (499 o.h.v. Triumph); J. H. Bull (490 c.c. Norton). Sidecars: T. Allibaud (550 Triumph sc.). Light cars: H. Noel (9.5 Rhodes).

The club is holding a 120 miles general efficiency trial on July 23rd, particulars of which may be obtained from the hon. sec., Mr. G. Alderson, 50, Albany Road, Northampton.

Hawick and District M.C.

The open hill climb held on Saturday, June 24th, was a marked success in every way, and a heavy downpour of rain in the interval, although making the finish twenty minutes behind scheduled time did not materially affect the competitors. Results:—290 o.c. class (experts barred): (1) D. B. Calder (249 New Imperial); (2) A. F. Pollock (249 Francis-Barnett). 350 c.c. class: (1) J. Guthrie (349 A.J.S.); (2) A. Reid (348 H.B.). 600 c.c.: (1) W. Smith, Junr. (499 Sunbeam); (2) J. Guthrie (349 A.J.S.). Unlimited class: (1) W. Smith, Junr. (499 Sunbeam); (2) A. Reid (348 H.B.). Open classes:—290 c.c.: (1) J. A. Porter (249 New Gerrard); (2) D. B. Calder (249 New Imperial). 350 c.c.: (1) J. A. Porter (249 New Gerrard); (2) A. Reid (H.B.). 600 c.c.: (1) G. Black (490 Norton); (2) J. A. Porter (292 New Gerrard). Unlimited c.c.: (1) G. Black (490 Norton); (2) J. A. Porter (292 New Gerrard). 600 c.c. sidecars: (1) J. Beck (499 Sunbeam sc.); (2) W. Smith, Junr. (499 Sunbeam sc.). Unlimited c.c.: (1) J. R. Alexander (749 Douglas sc.); (2) J. Beck (499 Sunbeam sc.). Winners of the team prize were: (1) Edinburgh and District M.C.; (2) Kelso and District M.C.C.).

ENTHUSIASM IN SOUTH AFRICA As the biggest annual race in Africa the Durban-Johannesburg event is described elsewhere in this issue. A. Long (998 c.c. Excelsior), third in the race with best nett time, finishing in a shower braved by 10 000 spectators.

HOLIDAY WEAR for the PASSENGER

Clothes for the Woman Sidecar Passenger when Touring.

By Miss PEGGY FRASER.

IN deciding what clothes to take away in the sidecar on a holiday tour, it should be remembered that there is only room for absolute essentials. There are, however, things that, while they must of necessity spend most of their time packed away in their case, will be required to shake out all right at a moment's notice.

Be Prepared.

If one intends going to the theatre or a dance whilst away, due preparation must be made or the penalty paid of being unsuitably dressed, and I know of nothing more calculated to spoil one's enjoyment. Also, one must be equipped for rain and cold in case the weather is bad; it is surprising what a large amount of summer clothing one may carry in a small space.

In the first place, the lightest fibre suitcase should be procured—its appearance does not matter. A good leather suitcase is a dead weight empty, and quite impossible when full. The fibre case should be fitted with a waterproof cover and a slip-on moiré cover, and it will look far smarter than those of the leather type.

It is well to decide on a predominating colour for the outfit, so in this case we will take grey, as then one thing can be worn with another successfully.

In one of my drawings I have depicted a fitted case made on the same principle as a tool roll. In this one can place all toilet requisites. The outside is moiré silk, to match the colour of the suitcase, and it is lined with oiled silk or waterproof sheeting. One end is arranged to form a pocket with a secure flap, and this holds everything that is used with water—toothbrush, sponge, soap, etc. Before putting these things away they should be squeezed dry. A baby brush and comb will be found quite large enough for use and far easier to fit in the case, in which accommodation can be found for hairpins, scissors, pins, etc.

Regarding face creams, if the kind used is made up in tubes all the better—a greasy cream to remove the dust and a vanishing cream for day time. Powder is much better carried if it is in a block, but whether or not it can also be kept in its place, and so can the manicure things.

The case then rolls up, and is kept closed by a strap and an elastic band, and it takes up far less room than any box would occupy.

A Russian blouse of fine grey suède with pipings and appliqué of signal red kid. Below is a miniature "hold-all" for toilet requisites.

A pretty frock of knitted silk.

For evening wear dull oxidised silver lace or any material having a metal thread has the advantage of not creasing.

For the Russian blouse shown in the same drawing, fine grey suède is pressed into service, with pipings and appliqué of signal red kid and gun-metal buttons. This is to be worn under a coat of fur and with a checked shirt.

The sketch in the bottom left-hand corner shows a checked shirt worn with one's coat, grey suède Russian boots, and a crush cap of red suède trimmed with a bird entirely composed of beads, with a tail of coque feathers.

A cape is, I think, the smartest shape for a waterproof, and it can be slipped on with greater ease than a coat. Therefore, I have chosen a grey silk cloth mackintosh trimmed with white rubber, and a pull-on hat to match.

Evening Wear.

The difficulty of the evening frock—always a problem when one is touring on a sidecar—and "in between" frock is overcome by the new "costume blouse" idea. Up to this year the "costume blouse" has been called a tunic or overdress. The foundation, which is grey *crêpe de Chine* of soft silk, will do for both, and is made almost straight, slightly eased at a low waistline, and has shoulder strap supports.

The "in between" frock could be made of knitted silk of a fancy stitch and edged with a silk ball fringe.

For evening wear dull oxidised silver lace could be chosen, or any evening material that has a metal thread, as it will not crush. If red is preferred, an overdress of dull silver beads mounted on net would look equally charming, and has the same advantage of not crushing. The waist should be outlined by a floral wreath.

A checked skirt with grey fur coat, grey suède Russian boots, and suède cap.

A grey silk cloth cape trimmed with white rubber.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

WEIGHT OF SIDECAR BODY.

? Having nearly finished making a two-seater sidecar, I find that the size is:—Length 6ft., width 21in., and depth 22½in. All my friends tell me that it is much too heavy, so I should like you to inform me, if you can, the weight of a two-seater body. I have weighed my sidecar, and it is 91½lb., so if this is anything near the correct weight will you kindly let me know?—P. O. T.

There is no definite "correct" weight for a two-seater sidecar body, but there is no reason why one weighing 90lb. should not be satisfactory, providing the sidecar is attached to a really powerful machine and the body itself is mounted on a strong chassis.

A LEGAL POINT.

? In June I purchased an Enfield outfit which was new in March. I was introduced to the owner by a motor agent who had supplied the machine; the agent guaranteed (by word only) that the machine was in perfect order and that any defects found would be made good. When purchasing I enquired from the owner if the machine had been in any accident, and was told that it had not. After a few days I started to examine the outfit and discovered certain proof that it had been in a smash, for the frame is twisted, the gear damaged, footboard stays bent, and the head lamp bulged (this had been turned over to hide damaged part). I consider that the machine is mechanically ruined. I called the agent's attention to the matter, and he was surprised with the false impressions that had been given to him and promised to take the matter up. I was informed to-day that a meeting had taken place, and the former owner was to have called upon me on Saturday last, but he never turned up. Should I be safe in taking proceedings against him for the return of my money? Should I have to summon the agent as a witness of the guarantee he gave on owner's behalf, and secondly, as to the amount of damage that has been done?—F.W.

Apparently the agent was selling the Enfield outfit on behalf of the owner, and the latter and the agent admit to uttering the representations which you say they made when the machine was purchased. As you knew at the time of purchase who the owner was, you would be right in suing the owner. If the agent had been selling on behalf of an undisclosed owner you could then have sued the agent; or, on ascertaining who the owner was, you could then have sued the owner. The best plan is for you to return the machine to the agent, and then sue the owner for the return of the amount paid, and subpœna the agent as a witness.

Important Dates.

Sat., July 8th—M.C.C. Meeting at Brooklands.
Wed., July 12th—French Grand Prix.
Sat., July 15th—B.M.C.R.C. Members' Meeting at Brooklands.
Sun., July 23rd—Belgian Grand Prix.
Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.
Sat., July 29th, North-Western Centre A.C.U. Open Hill Climb.
Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.
Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.
Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.
Sat., Aug. 12th—B.M.C.R.C. Members' Meeting at Brooklands.
Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.
Sat., Aug. 12th—Motor Cycle Races in Phœnix Park, Dublin.
Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.
Sat., Sept. 16th—The Scott Trial.
Sat., Sept. 23rd—500 Mile Race at Brooklands.
Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

BLOW BACK WITH AUTOMATIC VALVE.

? On an Autowheel engine which drives my invalid's tricycle I have experienced blowing back at the carburettor *i.e.*, when the hand is placed about a foot from the intake, petrol is deposited thereon. My "Hints and Tips for Motor Cyclists" indicates that this is due to a weak inlet valve spring or to a very weak mixture. Well, the automatic inlet valve has been fitted with a new spring supplied by the manufacturer. The exhaust valve is also completely new, and both have been ground in by an "old hand," so I expect they are otherwise adjusted properly. The carburetter is automatic, so possibly the weak mixture diagnosis may be eliminated. The motor is going as fast as ever, say about 20 m.p.h., though it is perhaps not quite so powerful on hills, but not a great deal less. The exhaust note is not so clear as formerly, being rather "woolly," as I might describe it, although compression is very good. However, I wish to get rid of the "blowing back" for the sake of economy and not to run the risk of fire, and to hear the healthy bark of my "baby" engine again.—J.R.

From your description the engine appears to be in good order, and we can only suggest that you make quite sure that the exhaust valve tappet clearance is not excessive. A certain amount of blow-back is almost always present in the case of automatic inlet valve engines. Although it would not effect any actual improvement, some benefit might be obtained from the fitting of a long pipe on the air intake of the carburetter; this would catch the petrol blown back and so tend to improve the fuel consumption.

OVER GEARING.

? I am riding a 4¼ h.p. single-cylinder three-speed machine (solo only), and I am desirous of raising my gear to the utmost limit possible. For ordinary riding in towns or speeds up to 20 m.p.h. I would use second gear only and change into top when a fair and suitable speed has been reached to make a silent change. I am quite aware of the difficulties of town riding on high gear. At present the sprockets have teeth as follows:—Engine shaft, 16T, gear box 35 and 15, and back hub 35; and the ratios are 5.1, 8.1, and 13.2 to 1. I imagine that the 15-tooth sprocket would be the most suitable to change.—A. S. T.

We do not think that you would be satisfied with the machine after making the suggested change; in all probability the petrol consumption would be very much higher, and wear on the back tyre would no doubt be abnormal. Not knowing the machine you are using, we cannot tell you whether it would be more convenient to change the sprocket on the gear box or that on the engine shaft; it is much more usual to alter the latter. If, however, you decide that it will be easier to fit a larger sprocket on the gear

box we do not recommend you to gear the machine higher than 4 to 1. To do this you would need a 19T. sprocket.

TUNING FOR SPEED.

(1) What, in your opinion, is the best valve setting for pure speed work, for a 499 c.c. T.T. Rover? (2) What top gear ratios do you recommend for speed work on the flat?—B. M.

(1) Very largely the answer to your question depends upon experimenting with various settings. If you have facilities for procuring special cams you should aim at getting an early exhaust opening and a closing point about 5 degrees after top dead centre. The inlet valve should open on top dead centre or a little after, but it should commence to open before the exhaust valve is completely closed; the inlet may remain open until 15 to 20 degrees after bottom dead centre. (2) This, again, is a matter for experiment, and may vary from day to day according to the weather conditions, wind, gradients, etc. Probably about 4¼ to 1 would be most suitable.

TWO-SPEED SELECTIVE CHAIN GEAR.

(1) In the outside ball race of a 1917-18 P. and M. gear I find about three or four balls missing; or were they originally contained in a cage? (2) I cannot unscrew the inner race so as to get out the spindle with eccentric attached; is it a right- or left-hand thread? (3) Neither race, so far as I can see, has a cage or a full set of balls; should this be so?—J. B.

(1) The balls in the countershaft ball races were not caged. (2) It has a left-hand thread. (3) A full set of balls should be fitted; there is no need to fit caged balls.

READERS' REPLIES.

MISSING AT LOW SPEED.

In your issue of June 22nd you advise "S.G.O." that his magneto points should open to the extent of 4 mm. [Unfortunately, a decimal point was dropped; the correct setting is 0.4 mm.—ED.] May I also offer "F.W.E.," who complains of his front cylinder missing at low speed, some information that may assist him? I had the same trouble on a Douglas, and found that by taking off the contact-breaker cam for the front cylinder, and packing it with a piece of thin sheet brass, thereby causing the points to open the same amount at both breaks, I eliminated all misfiring at slow speeds. —T.T. ASPIRANT.

SIDECAR ON SOLO LIGHTWEIGHT.

One of your readers, "F.A.R.," asks the question as to whether it would be detrimental to a 350 c.c. 3-speed Douglas to attach a lightweight sidecar occasionally. Perhaps my own experience with one may interest both him and other readers of your paper. I purchased a 3-speed Douglas in January of this year, and had fitted to it a Watsonian aluminium sidecar—the latter weighs but 60lb. My speedometer (new with machine) to-day registers over 4,400 miles, and I roughly estimate that at least 2,000 of that total mileage have been covered with sidecar and passenger (10 stone). Riding with the sidecar, it is absolutely "child's play" to average 30-35 m.p.h.—hills, of course, included. And I am still looking for the gradient up which I cannot take my passenger. Some, perhaps many, may doubt the accuracy of my words, but I have ample proof with which to support them. I have taken the stiffest hill-climbs round and about Birmingham—and have not been let down on one occasion yet. And further, except once when climbing the Clent Hills, I have had no necessity whatsoever to use my first gear, nor has my throttle been more than three-parts open when doing 40 m.p.h. on the level road. And finally, I had my engine down only to-day, and apart from carbon deposit on cylinder heads and pistons, every part was in perfect order, and there was not the slightest indication of any play in the big-end bearings.—H. S.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.

"H.E.T." (Hinkley).—398 c.c. ABC for solo purposes.

"A.E.L." (Cottingham).—247 c.c. Levis sports model: speed, overheating, m.p.g., etc.

"F.R.H." (R.N.).—349 c.c. Wooller and sidecar: comfort, speed, hill-climbing, overheating.

"W.G." (Milngavie).—Levis "Popular," fuel, belt, and tyre mileage; max. speed.

"F.C." (Mansfield).—499 c.c. Sunbeam (T.T.); 596 c.c Indian Scout: petrol consumption, speed, comfort.

"H.M." (Leeds).—749 c.c. Douglas and sidecar.

"F.G." (Staffs).—Grado pulley on 499 c.c. machine: efficiency in conjunction with light sidecar; belt slip.

"M.L.F." (Brixton).—1922 654 c.c. Quadrant and sidecar.

"S.E.R" (Cambridge).—348 c.c. Douglas: speed without special tuning; durability.

"F.W.F." (Chudleigh).—Behaviour of Scott Sociable on Dartmoor roads.

"E.R.W." (Manchester).—595 c.c. Douglas and sidecar. Burlington clutch conversion set.

SPARKLETS.

Revised Prices.

On and from July 1st, the prices of the "Schrader Universal" tyre pressure gauges will be appreciably reduced.

Australian Road Race.

First position and fastest time of the day was achieved by L. L. Brooks on a 349 c.c. A.J.S. fitted with a Cox "Atmos" carburetter, in the recent Kadina 100 miles road race in South Australia.

Road Laws.

A booklet entitled "The Roadmaker" is issued by The British Reinforced Concrete Engineering Co., Ltd., 1, Dickinson Street, Manchester; contained therein is an article on the Curiosities of Highway Legislation which makes quite good reading.

Home-constructed Machine.

Mention was made in the issue of June 22nd of a big twin, the J.F.P., built by Mr. T. F. Parkes. The correct name of the designer of this machine is Mr. J. F. Parker.

Gold in Place of Silver.

In the London-Land's End Trial this year, E. Foster (698 Raleigh) was credited with a silver medal. His protest, on the grounds of being baulked by another rider, has been allowed, and he has now been awarded a gold medal.

Two-Strokes at Brooklands.

It was stated in our issue of June 22nd that A. King Smith was riding a 348 c.c. Morris and sidecar in the 200 miles sidecar race at Brooklands on June 17th. His mount actually was a 247 c.c. standard sports model and sidecar, which makes the performance all the more creditable.

British Machines Abroad.

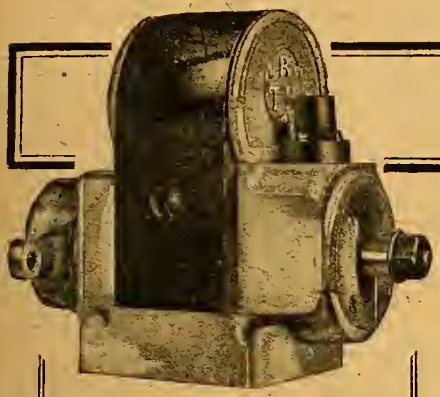
In the hill climb held recently at Solitude-Stuttgart, R. Mahlentili (499 o.hv. Triumph) was first, and made the fastest time of the day at a speed of over 56 m.p.h. on a difficult course. E. W. Howie, mounted on a similar machine, secured fourth place in this event.

Passenger Machine Power.

Is 500 c.c. sufficient for sidecar work? E. Arnold Wright, of Sherborne, informs us that he was riding a 499 c.c. Sunbeam and sidecar in the London-Edinburgh run this year, not a 770 c.c. outfit, and considers he had ample power for any emergency. The machine in question was fully equipped during the trial.

Mechanically Sealing Tubes.

Official trials under the auspices of the Royal Automobile Club have recently been carried out on the Jeff Patent Tube, which is similar to a standard tube with the exception that on the surface within the tube, beneath the tread of the tyre, there are super-imposed flaps of rubber, moistened with glycerine. The object of the trial was to test the ability of the device to hold air after intentional puncturing under varying conditions. After a 53-mile road test, with intentional nail punctures at intervals of 10, 20, and 30 miles, on a car fitted with 760×90 mm. tyres, the results were as follows: Pressure of front tyre under test, 28lb. per sq. in.; back tyre under test 13lb. per sq. in. This was after all nails had been withdrawn, and the car locked in the official garage during the night succeeding the trial. The pressures before the tests were respectively 55lb. and 60lb. per sq. in. Before locking up the car for the night the pressures were 30lb. and 45lb. per sq. in.



Unexcelled on the Track and in the Air, B.T.H. Magnetos are ideal for the road.

B.T.H. Magneto Successes.

B.T.H. Magnetos were fitted to the Triumph machine that gained 2nd Place in the Senior Motor Cycles T. T., and to the Sunbeam Cars gaining 1st Place in the International T. T., and the cup for the fastest lap.

They also helped create all the World's Records recently established by Sunbeam Racers.

ELITE SUPER NON-SKID

EXTRA HEAVY MOTOR CYCLE COVER

guarantees you at least 33⅓ per cent. more mileage than you have obtained from any other make, no matter what the price.

It embodies all the true principles that go to make a non-skid—Side Ribs, Cross Bars and Suction Cups. Designed to withstand the "kick" of any motor cycle engine yet made and to last out any other make. A combination of everything that is best in tyre manufacture based upon expert knowledge obtained during the past 12 years.

In order to introduce these covers we are prepared to allow a special discount of 25% off the first 1,000 covers sold. This offer cannot be repeated.

THE SELF-SEALING RUBBER CO., LTD., Hermetic Works, Birmingham

Ths "HERMETIC" **Belt.**

STRONG, DURABLE, FLEXIBLE, and RELIABLE.

Extended manufacturing facilities and a huge turnover enable us to cut Ferodo Prices

by 10%

The quality remains the same.

On and after July 1st the list prices of FERODO BONDED ASBESTOS, FEROBESTOS, AND FERODO FIBRE will be reduced by 10%.

The reduction is solely due to the savings effected by large production and extended manufacturing facilities.

The quality of Ferodo Friction Linings will remain as before—the very best possible—and this reduction in price is not being made at the expense of quality. Our first principle has always been and always will be to put the finest possible materials into our product, and upon this principle the Ferodo reputation has been built. Ferodo Fabrics are just as superior to competitive materials to-day as they were 10 years ago.

It may be that Ferodo Fricton Linings are slightly higher in price than certain competitive materials, colourable imitations of our own; but the extra durability and the perfect reliability of Ferodo Linings repay the extra first cost a hundredfold. Hundreds of thousands of motor drivers all over the world show their appreciation of this fact by their continuous use of Ferodo Friction Linings for Brakes and Clutches.

See the name on every piece.

21 GOLD MEDALS, 3 SILVER MEDALS
for Motor-Cycles and
2 GOLD MEDALS for Cars

All tubes treated with IMPERVO and NO TYRE TROUBLE!

Jackson's IMPERVO is *absolutely guaranteed* to seal punctures up to ⅛th inch instantly, preserve rubber, reduce risk of bursts, maintain correct inflation, double the life of tyres. It is non-sticky, easily injected, and lasts the life of the tube. A 5/- tin is sufficient to treat one motor-cycle tube. Post your order to-day or write for FREE BOOKLET and full particulars to

Jackson's IMPERVO
(Dept. 6), 48, Dover Street, W.1.

an intyre success

BRADFORD REGISTERED TRADE MARK

BARRACLOUGH'S
Combined Filler Cap
Petrol Gauge and Priming Tube.
(Patent applied for).
Fits in place of your ordinary Filler Cap.

By placing a finger tip over the small hole at the top at the Tube the Petrol is retained in the Gauge at the same level as in the Tank. The Tube can now be withdrawn through the Spring Clip without disturbing the Filler Cap. The level of Petrol is noted in the gauge, and can then be allowed to run into the Cylinder through the Compression Tap by simply removing the finger tip.

6/= EACH, Post free.

COMBINED FILLER CAP and OIL-GUN.
Fits in place of your ordinary Filler cap.
NO MORE OILY TOOL KITS!
When ordering these accessories, state make and year of machine.

COOLIE MOTOR OIL

It's not the change that's left in your pocket but the mileage you get out of the tin

that determines the economy of any lubricating oil. COOLIE Oil goes further than most other motor lubricants because exhaustive laboratory experiments and continuous practical tests have been applied to make it *exactly* suited in body and consistency to motor engines, so that it lubricates efficiently, without waste, and every drop tells. Every day more motorists are finding out these facts for themselves, follow their lead. A gallon tin will provide a fair test and benefit both your engine and your pocket.

Prices Quart **2/8** ½-Gal. **4/3** Gal. **6/9**

If your Dealer or Garage does not stock COOLIE Oil, send us a postcard with their name and address, and we will arrange for you to be supplied.

THE SUIT FOR SATISFACTION.

— "AQUAMAC" —

THIS is the suit which is being recognised by discerning Motorists as the ideal garment for *real* protection with comfort.

Made by experts, it fills a long-felt want in the Motor-cycling world, and the many testimonials we have received justify the claim we make that "**AQUAMAC**" is second-to-none.

POINTS WORTH NOTING ARE—

1. It is GUARANTEED to be WATERPROOF, even in the worst weather.
2. Style and fit—with the utmost utility—are assured. Made to measure without extra charge.
3. It is equally serviceable for *fine* weather riding—the method of ventilation dispenses with any "stuffy" feeling.
4. The hard-wearing material used in its manufacture ensures long service.
5. Prices are within reach of all Motor Cyclists.

The Triple Fly Side openings are fitted with Non-Water Conductors and Pneumatic Edges throughout the suit. No water can reach inner garments.

PRICES.

Suit complete	£2 15 0
Fully Fleeced Lined Coat only ..	£1 17 6
Overalls only	17 6

No struggling out of dirty overalls—just a few pulls at the side seams and the trousers fall to the ground.

Desmond's Miracle Oil
A Revelation in Lubrication

Provides a system of UPPER LUBRICATION for every kind of Petrol and Benzol Internal Combustion Engine.

SHORTLY WHAT IT DOES.

1. It ensures PERFECT LUBRICATION in those parts of the engine which have NEVER BEEN PROPERLY LUBRICATED BEFORE, viz., combustion chamber walls, upper ends of piston, valve, and valve stems.
2. It absolutely PREVENTS CARBON DEPOSIT.
3. It produces more POWER, SPEED, and COMPRESSION, and eliminates knocking.
4. It reduces FRICTION and HEAT in the most VITAL PART of the engine.
5. It **PROLONGS** THE LIFE of your engine and REDUCES UPKEEP COST.
6. It **INCREASES** your MILEAGE.
7. It gives you the SUPERLATIVE PLEASURE of a SWEET RUNNING ENGINE.
8. Suitable for every description of engines.

DIRECTIONS.

Just pour one ounce into each 2 gallons of Petrol or Benzol.

NO MIXING OR STIRRING REQUIRED.

Price 12/6 a 32 ounce tin, **50/-** a gallon. A 32 ounce tin treats 64 gallons of Petrol or Benzol —viz., about 1d. for 20 miles, and it **saves you far more than it costs.**

There is a one-ounce measure in every tin.

MANUFACTURERS' STOCK

MAKINKOT BRAND

TO BE CLEARED.

Fawn double texture, interlined rubber,

MOTOR SUITS

THESE suits are made of Fawn double texture cloth, interlined rubber

The seams are cemented, sewn and taped, making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemeoted seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

YOUR HOLIDAY KIT IS INCOMPLETE WITHOUT ONE OF OUR WATERPROOF MOTOR CYCLE SUITS

MOTOR CYCLE SUIT

With Plaited Leather Belt.

GUARANTEED WATERPROOF

SPECIFICATION

MADE from hard-wearing double texture material with an interlining of Rubber. Double Breasted Jacket, with all-round Belt and Leather Buckle, large Patch Pockets, and converted collar to button right up to neck, to fasten with Throat Tab. Wind Cuffs in sleeves. All seams of the Suit are rubber cemented and taped with extra material, making the garment absolutely waterproof. Overall Trousers with spat - shaped leg; wind gussets to keep the wind from the leg and boots; fastened with patent clasp fasteners, enabling the trousers to be pulled off in a moment. The suits are newly manufactured, and every care is taken with details so that the garment will meet the severest test. We give full guarantee that this suit is thoroughly waterproof, and impervious to the most drenching & continuous downpour.

THESE SUITS ARE NEWLY MADE FROM FRESHLY PROOFED MATERIAL BY EXPERIENCED WORKMEN, AND NOT HALF PERISHED CLEARANCE LINES OR W.D. SURPLUS.

PRICE **35/-** **NO EXTRA CHARGE FOR CARRIAGE.**

TRADE MARK "KING DICK"

"KING DICK"

Accessories

"King Dick" SPANNERS are guaranteed for ever.

British made from solid steel drop forgings, and capable of infinite adjustment. Always grip and never burr the nuts. Prices of screw spanners 3", 3/3; post free, 3/6. 4", 4/6; post free, 5/-. 6", 7/-; post free, 7/9. 9", 15/-; post free, 16/-.

"King Dick" TOOL KITS

consist of ten "King Dick" tools in high grade canvas roll with adjusting strap and pocket. The tools are the best of their kind—and all you really need. Price 27/6; post free, 28/6.

"King Dick" BELTPUNCH

Made from steel forgings accurately machined and well finished. Will pierce clean holes through the toughest belt without clogging. Made in four sizes, for ¾", ⅞", 1" and 1⅛" belts. Price 3/6 each.

"King Dick" Belt Fastener

Strong, non-slipping, and easily detachable. Wear is taken up by hexagon-shaped bushes of high quality steel, scientifically hardened. Serrated clamps grip the belt end securely. There are no loose pieces to fall about when it is uncoupled. It is well finished and practically rustproof. Made in 3 sizes: No. 149 for ¾" belts; No. 150 for ⅞" and 1" belts; No. 151 for 1⅛" belts. Prices: Plated, 1/4 each. Black, 1/2 each.

2-SEATER Trumbull Light Car, detachable wheels, lat model, running order; £80; exchange combinatio or solo and cash.—4a, St. John's Wood Rd., Maida Vale London, N.W. [873

CARDEN 2-seater 1921, fully equipped, hood, screen lamps, tax paid; £77/10; ready to drive away motor cycle as part payment.—Wanchope's, 9, Sho Lane, London. [867

1920 8h.p. A.V. Monocar with dickey, speedometer electric lighting, Klaxon, guaranteed perfect con dition; £55.—86, Church Rd., Upper Norwood, S.E.19 'Phone: Sydenham 2363. [809

COVENTRY PREMIER 4-wheeler, dynamo, speedo meter, spare wheel, condition good throughout taxed for year; £165.—James, c/o Bradmores, 462 Harrow Rd., Paddington. [871

1920 G.N., standard model, dynamo lighting, spar detachable wheel, good tyres, taxed to Decem ber, owner bought 1922 G.N.; £110.—Olphert, 66 Church Rd., Barnes, S.W. [605

BAYLISS-THOMAS 1922 10h.p. Model, 4-cylinde water-cooled engine, 3 speeds, Magdyno; 30 gns.; immediate delivery.—Godfrey's, Ltd., 208, G Portland St., London, W.1. [073

1922 Morgan Popular, £150; Grand Prix, £180 8h.p. Rover, £220; in stock for immediate delivery easy payments only 4% extra.—The Premier Motor Co Aston Rd., Birmingham. [077

COVENTRY PREMIER, 1922, latest model, brand new, just arrived, trials and tuition free; £23 cash or easiest of easy payments.—Wilkins, Simpson opposite Olympia, London. [776

HUMBERETTE, w.c., 8h.p., 1914, 3-speed and re verse, licensed and insured for the year, spar tyres, etc., good condition; £75.—Longman Bros., 17 Bond St., Ealing. Tel.: 689. [862

RUNABOUTS AND CYCLE CARS.

6 GNS.; exchange, cash either way.—Buckingham 1914 streamline 2-seater, 8h.p. twin, water-pled, hood, screen, lamps.—Seabridge, Hansler Rd., st Dulwich. Sydenham 2452. [6941

1919 Morgan Runabout, Grand Prix Aero Model, M.A.G. engine, electric side lamps, acetylene ad, tax paid; £115.—W. T. Dunn, Ltd., 326, Euston l., N.W.1. 'Phone: Museum 5391. [8352

1921 Temperino 2-sealer, hood, screen, 5 wheels, acce-sories unregistered (demonstration model), scratched; £100; exchange electric Harley com-nation.—89, East Hill, Wandsworth. [8341

CYCLE Car, 3-wheeler, 2-seater, perfect order, £28; also new light car chassis, with springs, £3/10; other, with 4 wheels, £6; write appointment.—R. Hall, Hookman, Whetstone, London. [7632

NEW HUDSON 3-wheeler, 1922, tax paid, M.A.G. engine, dynamo lighting, spare wheel, electric and lh horns, hood and cover, screen, etc.; £190.—ner, "Carlton Dene," London Rd., Ewell, Surrey. [8638

A.C. Sociable by the A.C. Company, dependable runabout, take 2 persons anywhere, good condi-n and appearance, hood, screen, lamps, etc.; bar-in, £40; trial.—29, Alsop St., Upper Baker St., ndon, N.W. [8169

COVENTRY PREMIER 4-wheeled super runabout, 8h.p. water-cooled, spare wheel, dynamo, fully sured, etc.; £230. Motor cycles, etc., taken in part change; instalments if desired.—Frank Whitworth, d., 139, New St., Birmingham. [6063

h.p. Coulson 2-seater Cyclecar; brand new, beau-tifully equipped, windscreens, hood, Smiths, eedometer, clock, D.A. lighting; sacrifice for quick e, £95; absolute bargain; year licence.—27, Wandle l., Wandsworth Common, S.W.17. [8429

8 GNS.—A.V. Monocar, with dickey seat, J.A.P. engine, 2-speed gear, lighting set, Klaxon, adscreen, sporting appearance, painted red, black idguards, reliable, fast; exchange considered; £45 919) to £70 (1921).—A.V. Specialist, 103, Castle-u, Barnes. [8710

1916 Morgan, Grand Prix model, water-cooled J.A.P. Engine, hood screen, discs, all lamps, eedometer; mileage to date only 6,000; in excep-nal condition; £120.—Homac's, Morgan Service pot, 243, Lower Clapton Rd., N.E. 'Phone: Dal-n 2408. [8514

1916 Victor Cycle Car Chassis, 9h.p. Precision en-gine, W.C., V radiator, channel steel frame, 2 eels, reverse, wire wheels, cantilever springs, first-ss condition and good running order, including ge quantity spares; £30.—Oakhurst Lodge, Sylvan ll, Upper Norwood. [8099

1.N., December, 1921, model, detachable wheels, spare wheel, Ace polished aluminium discs, hood, een, speedometer, horn, maker's 6 months' guaran-, perfectly new; £165; maker's price, November, 21, £240; any trial given; room wanted.—Ridgway, oad St., Hanley, Staffs. [7611

MORGAN, C.P., 1914; £75. Morgan, G.P., 1917; £100. Morgan 1918 G.P., magneto; £115. stle 3, 1920; £110. G.W.K., £75. Bayard, £90. ro 1920, £85. De Marcay 1920, £110. Tamplin 19, £65. Warne 1914, £35. Ford 1917, English eater, £160. Reasonable exchanges, easy payments. Railton, Cobham, Water St., off Blackfriars St., nchester. [8433

Spare Parts

MORGAN.—All spares from stock.—Maudes', 100, Gt. Portland St., W.1. [8454

MORGAN Spare Parts Depot.—Spares for all models from stock; list free.—Elce, Ltd., 13, 15, and , Bishopsgate Av., Camomile St., E.C.3. 'Phone: enue 5548. [0074

MORGAN Service Depot.—Officially appointed by the Morgan Motor Co. Overhauls and repairs ecuted. Every conceivable spare in stock.—Homac's, 3, Lower Clapton Rd., N.E. 'Phone: Dalston 08. [8516

TAXI-COMBINATIONS AND CABS.

"COUNTY" 8h.p. B.S.A. Sidecar Taxis, as licensed throughout the country.—Write for full particu-s, County Cycle and Motor Co., "Originators," 0, Broad St., Birmingham. [5353

CARS FOR SALE.

LUMBER 2-seater, a.c., in running order; nearest offer, £45.—Gamble, 50, Victoria Rd., Margate. [8285

PREMIER Car, 2-seater, perfect running order; £85 or near offer.—109, Beam St., Nantwich. [5800

BABY Peugeot Car, 3 speeds and reverse, dynamo lighting; £70.—Box 2315, c/o *The Motor Cycle*. [8694

ROVER Cars.—1922 8h.p. model; price £220; early delivery.—Godfreys', Ltd., 208, Gt. Portland St., ondon, W.1. [0350

WEST Norwood! 60 cars, absolute bargains, list free, exchanges.—Douglas S. Cox, Lansdowne, est Norwood. [1932

1919 Charron Squad, 4-cyl. water-cooled engine, electric lighting; cost £150; accept £35.—Box 14, c/o *The Motor Cycle*. [8693

8-10h.p. Clyde 2-seater Car, White-Poppe engine, hood, Stepney, recently overhauled, repainted, perfect order, photo; £60.—Johnson, 65, Princess Rd., Leicester. [8369

ROVER 1922 Model de Luxe 8h.p., brand new, trials and tuition free; £245 cash, or easiest of easy payments.—Wilkins, Simpson, opposite Olympia, London. [7760

HALIFAX.—1922 B.S.A., Calthorpe, Coventry Premier, Lagonda, and Rhode. Latest models. Cash or exchange.—Halifax Motor Exchange, Horton St., Halifax. [8649

2-SEATER Belsize, 1913, first-class running order, owner driven; £85; a bargain, as owner is buying larger car.—Write "E.G.," c/o Charles Barker and Sons, Ltd., 31, Budge Row, E.C.4. [7731

G.N., 1922, Touring, £225; All-Weather, £250; fully equipped; inspection and trial invited. Deferred payments arranged. From Agents and Showrooms, 222, Gt. Portland St. Museum 2271. [1629

BEDFORD Buick 15h.p., interior drive, 3-speed, reverse, electric light, upholstered Bedford cord, excellent condition, perfect; £95; exchange electric Harley combination.—89, East Hill, Wandsworth. [8342

OCCASIONAL COMMENTS.

By IXION.

Proportionate Lubrication—As It Was.

SO long as I oiled by drip feed or hand pump, my varying of the oil supply was necessarily rather casual. Like most men, I worked chiefly by mileage. I saw that the pump was emptied every five, seven or ten miles according to the size of the engine and its load, working by the speedometer, the milestones, or my knowledge of the route, as the case might be. Every now and then I found myself in exceptionally severe country, and injected an extra pumpful now and then by pure guesswork, as the gradients impressed me or I chanced to notice a hottish smell from the engine or heard a conk when the engine picked up on top gear. I always knew that this rule-of-thumb system was wasteful. Accurate it could never be, for the data were too slender. Niggardly I would not let it be; it is cheaper and easier to decarbonise than to fit new bearings.

And As It Is.

NOWADAYS I use a mechanical pump, which automatically varies the feed of oil in relation to engine speed. There is also a rough variation in relation to engine load, since a heavy load compels a change of gear, and a gear change makes the revs. tower at once. So simple a fitting does not, of course, result in absolutely accurate lubrication. There is a maximum-minimum adjustment lever on the pump. I set this to the best of my judgment for normal running, and I reset it for abnormal running, e.g. when I climb Tornapress or indulge in an early morning scrap. But there is a giant advance towards accuracy. I notice two particular novelties since I fitted the mechanical pump. The first is that in genuinely hard work a tank of oil lasts ever so much longer than it used to do. After all, few men are precise enough to watch a speedometer closely all day long. Some riders don't carry a speedometer at all. Some roads have no milestones. Lots of our mileage is done without route cards. Under all these circumstances I have evidently given my engine 50 per cent. more oil than it actually required, as a cheap form of mechanical insurance. Secondly, I notice that when my pump is correctly set for normal running at easy touring speeds, the ration is absurdly large for local pottering. Living in the country, I do a good deal of lane work at perhaps 15 m.p.h., the surface and corners forbidding a more popular pace. At the touring setting of the pump, the engine smokes furiously under these conditions.

The Defects of a Mechanical Pump.

I SHALL never go back to the drip or the hand pump, but my ideal is still to seek. In the first place, I want a mechanical pump incorporated with my engines, and situated where it is proof against accidental blows. Secondly, I shall not rest fully satisfied with a pump which makes demands on my intelligence so often as the current type. My riding may be divided under four heads:—

(1) Local pottering at under legal limit.
(2) Easy touring at an average of 20-25 m.p.h.
(3) "Scrapping."
(4) Heavy climbing.

The obvious solution is that the pump adjuster should be coupled up to the throttle, so that whenever the throttle is opened beyond a certain degree (say, that opening which gives 15 m.p.h. on the level), the throttle should "pick up" the pump lever, and increase the feed, a spring returning the pump lever as the throttle is shut down. I can easily fix this up on my own mounts, but I fancy the trade will be reluctant to market it, for fear of duffer owners muddling the adjustments.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

Occasional Comments.—

Variation with Engine Speed.

IT may prove—when we all possess more experience in handling such pumps—that a feed which varies with engine speed fills the bill. Such a principle was hopeless in the days of single gears, for an engine speed of so many r.p.m. might imply either easy running on the flat with a shut throttle or slow slogging up a hill on full throttle. To-day the gearbox eases that special difficulty. But there is still a considerable difference between 2,000 r.p.m. on the flat on top (say, a 40 m.p.h. wind, and 2,000 r.p.m. uphill on bottom (say, a 10 m.p.h. wind). It is really rather ungrateful of me to raise the point; you see, the mechanical pump has relieved me of so much worry that I fall to wondering whether the *entire* burden of lubrication will ever be completely removed from my lazy shoulders. Till then, *hoch* the mechanical pump! I have every reason to know that this item of specification has done much to make the American machines popular, and I advise British makers to consider the point very closely.

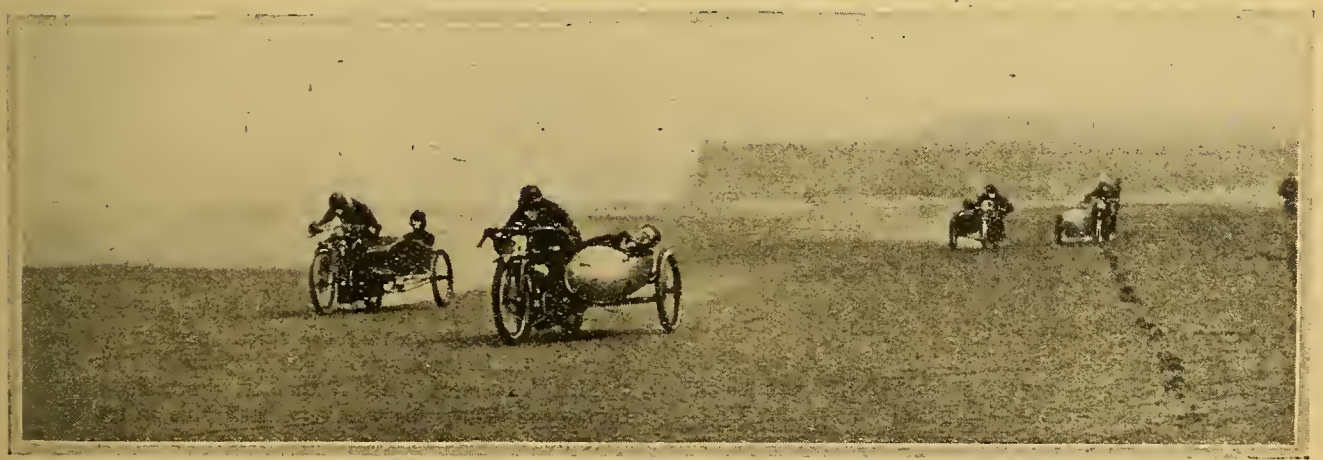
Still Scooting.

BEHIND the scenes the featherweight utility machine for inexpert riders is still quietly developing. At the moment *de luxe* specifications (like the Harper runabout) and hybrid layouts (like the Ner-a-car) enjoy most of the limelight. But *pukka* scooters are still being ridden, and *pukka* scooters are still being made. Naturally, their great asset is extreme lightness. There are people to whom even a 150lb. motor bicycle seems prohibitively weighty, and there can be no doubt at all that if ever a 75lb. machine can be designed to give really good service, it will eventually become a best seller. Oddly enough, people who have never cycled or who have only cycled do not object to the queer steering which a tiny front wheel involves; and this hoodoo is objected to by pure motorcyclists, and apparently by nobody else; I presume that we drive the little ones too fast. The average scooterist without previous motor cycle experience seldom complains of anything except unreliability; and by "unreliability" they generally mean those occasional petty ailments which a motorcyclist takes as part of the day's work—a punctured tyre, a choked jet, and a sooted plug. Nevertheless, the scooter designer is rather up against it when he is asked to provide a plug that can't soot, a jet that can't choke, and a tyre that can't puncture within a weight limit of 75lb. or so. I believe that some day we may see a super-miniature selling in thousands; but as yet they can hardly satisfy people who obstinately refuse to study the elements of their simple mechanism.

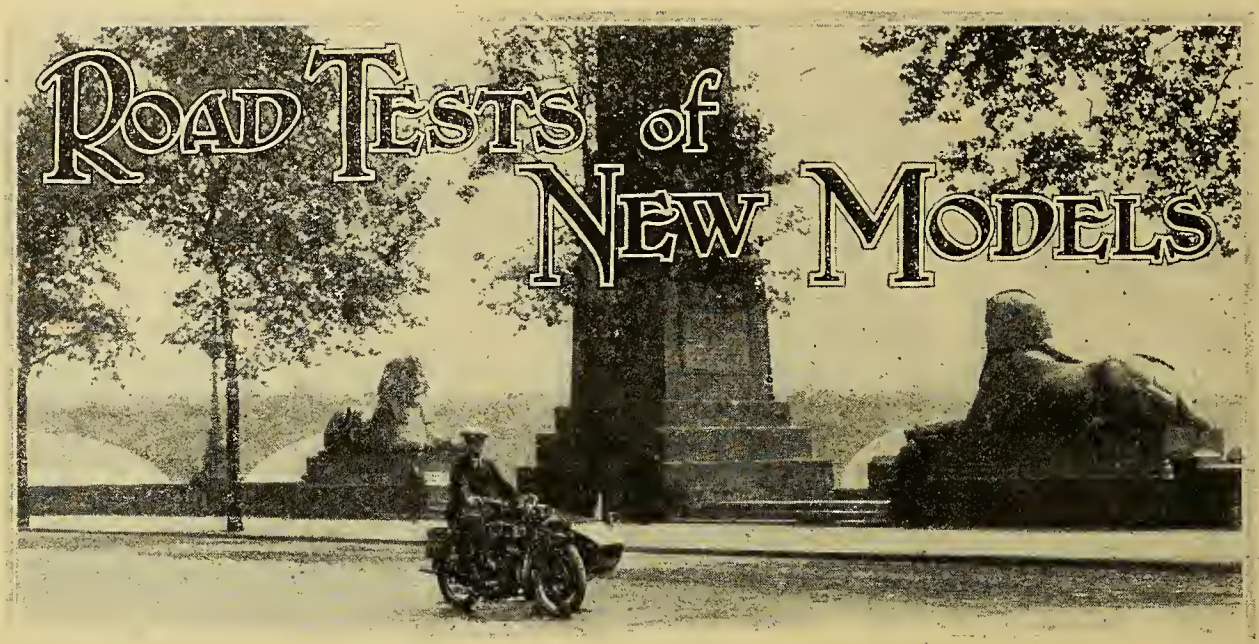
Less Noise, Please.

I HAVE never seen eye to eye with those who hold that a motor cycle should proceed with the inaudible twitter of a Rolls-Royce. But I fully sympathise with the many people who complain of the awful row which many modern machines create. It is only necessary to sleep at any house adjacent to a main road to recognise what an intolerable clatter many current engines make. The sharp crack of the modern machine with high compression and overlap valve timing is one of the most penetrating sounds known to man. Occurring at irregular intervals in sudden crescendos and diminuendos, it is well calculated to banish sleep for the moment; and after all a considerable percentage of the population find sleep hard to woo. Baby two-strokes are among the principal offenders. No real nuisance exists by day; but a night in one of the front bedrooms of the King's Head at Coventry or of any other roadside hotel, will convince any doubter that neither a hard day's work nor a soft pillow will seal the ears against the occasional passage of a 1922 motor-cycle. On Dr. Low's audiometer our exhausts may seem trivial compared to the noise of shunting at a railway station, or of a tram bumping over worn rails. But actually our exhausts are just about the most disturbing sounds in the nocturnal orchestra. I have no great sympathy with penalties inflicted for driving noisy machines in daytime; but I am on the side of the magistrates every time a rider is punished for making night hideous.

YORKSHIRE CENTRE A.C.U. SPEED CHAMPIONSHIPS.



A keen contest on the sand at Saltburn—C. N. Sadler (490 c.c. Norton sidecar) hard pressed by C. P. Wood (532 c.c. Scott Squirrel sidecar). The latter won at a speed of 45 m.p.h.



555 c.c. Four-Speed P. & M. Sidecar and Solo.

SPECIFICATION.

ENGINE: P. & M. single cylinder, side-by-side valves, 81 × 100 mm. = 555 c.c. (rated at 4½ h.p.)
CARBURETTER: B. & B.
MAGNETO: E.I.C.
TRANSMISSION: ⅞ × ¼ in. chains, enclosed.
GEARS: P. & M. four-speed (P. & M. two-speed selective clutch gear combined with two-speed gear box) and kick-starter.
LUBRICATION: "Best" mechanical pump.
TYRES: 26 × 2½ in.
FRAME: Rigid.
FORKS: P. & M.
BRAKES: Front, dummy belt rim; rear, contracting band, pedal operated with ratchet hand lever.
SIDECAR: P. & M.
PRICE: Sidecar outfit, £150, completely equipped (acetylene).

ALTHOUGH their old type "3½ h.p." model was always extremely popular as a sidecar machine, the makers of the P. & M. recognised some time ago that the most sensible way of ensuring it full capability for such work was to fit a four-speed gear box. For 1922 they went a step further and increased the engine capacity to 555 c.c.; and recent experiences on the road prove that the resultant product more than justifies what are in the nature of big departures for a firm which so long remained faithful to its initial designs.

The control of the four-speed 1922 555 c.c. P. & M. is such that even an experienced motor cyclist has to accustom himself to it. Once the handling of the four-speed lever is understood, however, gear changing is delightfully simple, since the declutching of the drive is effected automatically with each change of ratio.

Practical Detail Fittings.

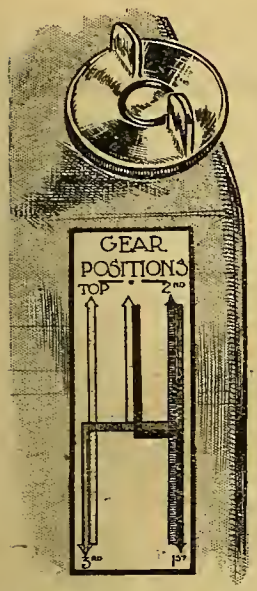
Amongst the features which characterise the new model may be mentioned the front forks, the kick-starter, the large capacity petrol tank, the Best mechanical oiling system, and the ratchet hand brake—all of which are distinctly advantageous. The standard sidecar is both comfortable and ornamental, being well upholstered and providing ample passenger and locker accommodation. The chassis, although rather narrow in track, is strongly built.

On the first machine we tried—the sidecar model—no trouble of any sort was experienced beyond a slight difficulty in starting. In this connection may be mentioned the improved type of kick-starter, which is built on a principle entirely different from the old pattern. It is possible to get a reasonably good "swing" on the engine, and it is quite efficient, but it would be better, perhaps, if the actual pedal were made on a slightly larger scale, so as to enable the foot to obtain a more secure purchase.

During the course of several hundred miles, some under none too easy conditions, the engine itself appeared to be ultra-reliable and amply powerful. The mechanical oiling system, too, worked with absolute regularity and efficiency.

By taking advantage of the gears, the 555 c.c. P. & M. will equal the performance of most 750 c.c. sidecars. For the most part the ratios are sensible, but it seemed to us that the third speed was lower than should be necessary. The drop from "top" to "third" is more marked than is desirable with a four-speed gear; this was very noticeable in traffic.

It would be something in the nature of a revelation to meet, within fifty miles of London, anyhow, the hill that the outfit would not take on bottom, or even second gear with some ease.



A transfer diagram on the tank acts as a guide to the gear positions, since there is no gate for the lever. The central position is for starting.

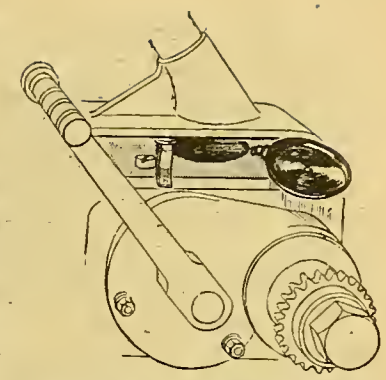
Locking the Brake.

The ratchet hand-brake lever, situated on the right-hand side of the tank and to the rear of the change speed control, is a very convenient accessory, but one must remember to release it before starting! It acts by locking the foot brake. One point, perhaps unimportant, but nevertheless demonstrating that attention to detail which marks the P. & M. throughout, is the design of the petrol and oil tank filler caps. These are of a sensibly large size, and are fitted with wing pieces on the upper surfaces for easy and rapid removal; they are of the "pickle jar" lid type, with screw-expanded leather washers, and effectively prevent any leakage. In fact, during our trial, a point was made of filling up the tank to full capacity in order to test this feature, and the result was extremely satisfactory.

The riding position proved to be well planned, and long-distance journeys were undertaken without experiencing strain. The springing of the Brooks cantilever saddle deserves a good proportion of praise for this quality, but thanks are also due to the general responsiveness of the front forks: very little road shock is transmitted to the handle-bars. On an average road the outfit may be steered easily with one finger, and at times it is possible to drive "hands off." However, when cornering sharply in either direction, we noticed an inclination to proceed crabwise.

Footboard Comfort.

While it must be confessed that the rider has no desire to execute step dances on motor cycle footboards, greater freedom and consequently greater comfort on long journeys might be obtained from larger footrests.



An inspection cover similar to a contact breaker cap is provided on the top of the P. & M. gear box.

As a Solo Mount.

Later we tried another machine of the same type solo. Perhaps the point that rendered it so attractive was its excellent balance, coupled with the improved saddle springing.

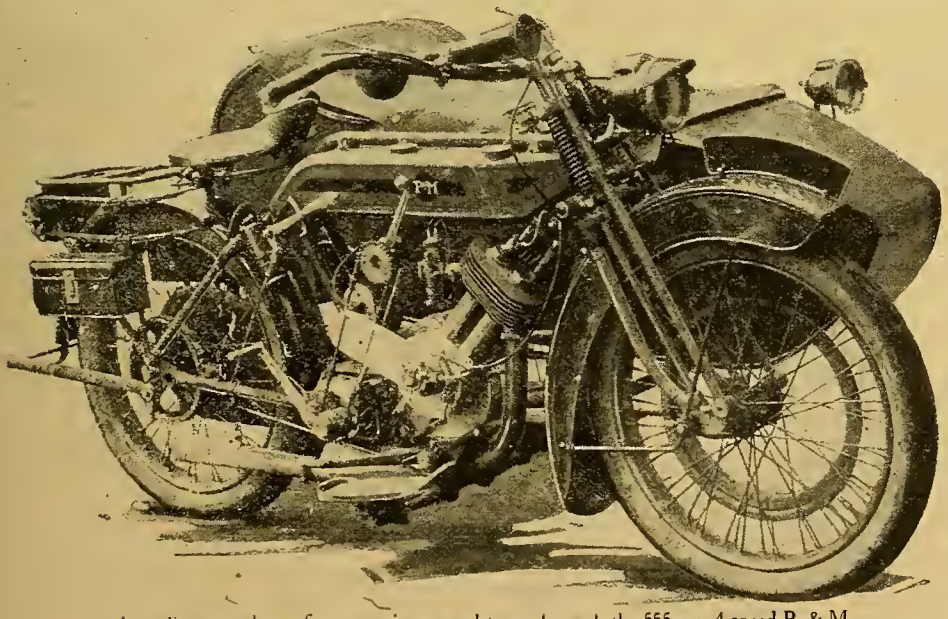
On the average road the absence of any shock or "bumping" is a pleasing feature, and even on wavy and rough surfaces the machine rides very comfortably. Our particular mount happened to be geared for sidecar work, and had about 2,000 miles to its credit before being handed over to us, but, nevertheless, the speed attainable—just 50 m.p.h.—was quite satisfactory, and the acceleration good. The engine itself kept remarkably cool, and was agreeably free from oil around the crank case and timing cover, and the driving chains operated without noise.

Caused by Touring Bars.

Perhaps caused by touring type handle-bars, the same apparent lack of weight on the front wheel was observable when riding solo as with the sidecar outfit. There was a tendency, slight but undeniable, when travelling at speed, for the front wheel to wander a trifle.

Although any rational speed can be obtained when desired, the P. & M. solo is remarkably docile and easy to handle in the thickest traffic. In the busiest parts of London, both on dry roads and on grease, the machine behaved very well indeed, the lively acceleration and carefully constructed brakes contributing largely towards this.

Kop Hill, the scene of the downfall of many excellent machines at various times, was tackled comfortably on "top," despite a loose surface and a rather "spongy" back tyre.

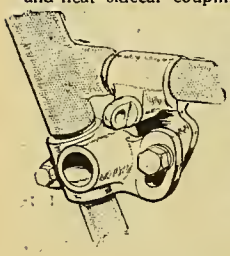


A medium weight outfit, possessing a good turn of speed, the 555 c.c. 4-speed P. & M.

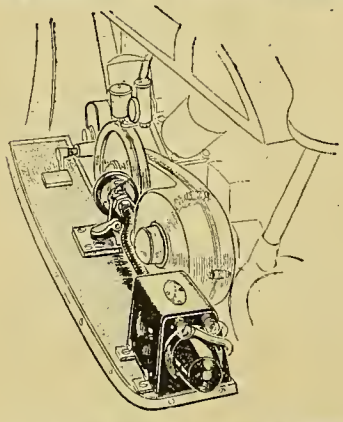
AMONG THE ACCESSORIES

New Sidecar Coupling.

Adjustable to suit any machine, an ingenious and neat sidecar coupling has been devised by Arden and Smith, of Ladywell Walk, Pershore Street, Birmingham. The clips to which the connection is attached grip the lower tank rail and front down tube, making an extremely rigid joint.



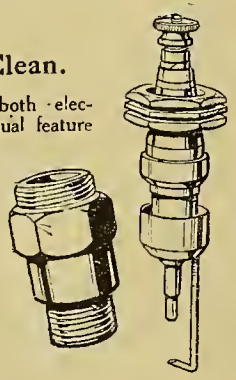
Adaptable Electric Lighting.



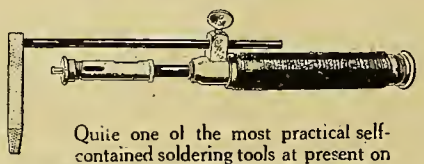
Friction drive from, for instance, an outside flywheel allows the Vale dynamo lighting set to be fitted with a minimum of trouble. Complete with accumulator and well-built head and tail lamps, it is marketed at £12 7s. 6d. by the Vale Engineering Syndicate, 8–11, Brown's Buildings St. Mary Axe. London E.C. 3.

Easy to Clean.

Detachability of both electrodes is the unusual feature of the Sygil plug, which has mica insulation and easily made joints (H. Hainsworth, Ltd. Well Lane. Batley, Leeds.)



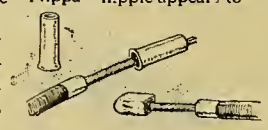
Soldering—Anywhere.



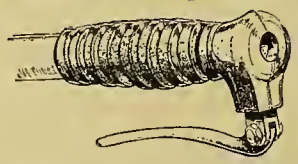
Quite one of the most practical self-contained soldering tools at present on the market is the Wilesmith device. Sold at 10s., it carries sufficient petrol for 20 minutes' soldering and has a convenient, insulated handle (A. J. Wilesmith & Co., High St. Alcester.)

Solderless Bowden Nipples.

Simply a little lead sleeve which doubles the wire up, the "Nippa" nipple appears to provide a very secure fixing for Bowden controls. 12 for 5s. (S. Bottomly, Park Lane. Reigate.)

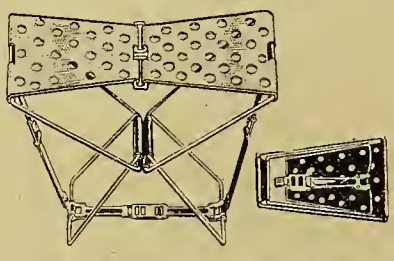


Easily Fixed Rubber Grips.



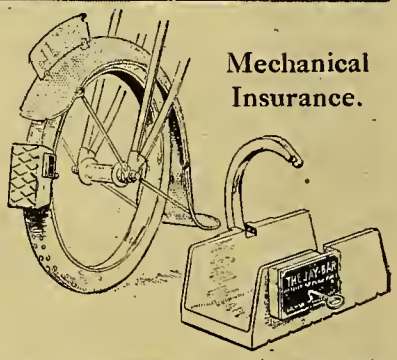
Lloyd "Shock-stop" rubber handle-bar grips may be slipped over inverted control levers without removing them. 5s. per pair. (T. Lloyd, 12, Bridge St., Manchester.)

Metal Folding Seat.



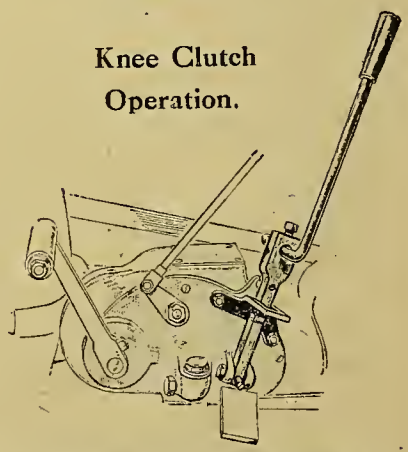
Strong and light, the Grigg folding seat should be of great use for picnics, or as an extra sidecar seat. It folds up into such a small space that it can easily be carried in a sidecar pocket. 10s. 6d. (The Grigg Motor & Engineering Co., Ltd., Winchester Works Winchester Road, Twickenham. Surrey.)

Mechanical Insurance.



Short of changing a wheel the motor cycle thief would find some difficulty in making away with a Jay-Bar locked machine. 15s. 6d. (The Jay-Bar Manufacturing Co. 14-16, Maidenhead Court, Aldersgate Street London, E.C.1.)

Knee Clutch Operation.



Worked by side-ways pressure, this clutch control is made for 1921 type B.S.A. gear boxes; the handle-bar control is retained. (W. B. Corah The Garage, Staple Hall. Northfield, Birmingham, and The County Cycle and Motor Co. Broad Street. Birmingham.)

Useful Extras for the Pillionist.

7s. 6d. invested in a pair of Eversure footrests ensures a good return in comfort and safety for the pillion passenger (A. J. Dawson Ltd. Coventry.)

ACTIVITY OF THE CLUBS.

(1) An exciting moment at the Yorkshire Speed Championships held on Saltburn sands. R. T. Cawthorne (490 c.c. Norton sidecar), H. Langman (532 c.c. Scott sidecar), C. P. Wood (532 c.c. Scott sidecar) rounding a corner together. (2) Scottish inter-club team trial. The start for Amulree. (3) R. Brown (799 c.c. A.J.S.) rounding the last bend on Amulree. (4) Austin Light Car and Motor Cycle Club Charity Gymkhana. The "pig to market" race. (5) A speed impression of C. P. Wood (486 c.c. Scott Squirrel) on the sands at Saltburn, and (6) the sporting spirit of the Yorkshireman is exemplified by the crowd that gathered there.

LADIES IN COLONIAL TYPE TRIALS.

Well-known Lady Competitor Defends her Sex. Other Opinions.

We were constrained to remark recently on the unsuitability of certain ultra-severe colonial type trials for lady motor cyclists. Perhaps, naturally, the ladies have taken up arms without much ado, and force us to confess that there are many women who so thoroughly enjoy a sporting trial that their very enthusiasm ensures that they gain a thorough knowledge of handling a two-wheeler on rough going. In some cases these ladies have been noted to shine more brilliantly than so-called expert trade riders of the opposite sex, making up in "pluck" what they may lack in sheer physical strength. Mrs. Janson is one of these, and her views on the question, stated in the accompanying article, are evidently shared by others. It must be emphasised that our original remarks referred only to the most difficult moorland trials, and that perhaps we omitted to call due attention to the fact that comparatively few male motor cyclists are fully qualified to take part in such events.

I REMEMBER reading, not very long ago, an article in *The Motor Cycle*, by "Road Rider," in which he said that his mental state on going North for the Scottish Six Days Trials resembled that of a very young rabbit about to cross the Portsmouth Road for the first time in its life. This description pleased me greatly, chiefly because it struck me as being in reality far more applicable to myself than to the well-tried "Road Rider," who must, at any rate, have known what was in front of him, whereas the rabbit and I had this in common, that we were both venturing forth into the unknown with beating hearts and our eyes starting out of our heads with fright.

But my state of mind on that occasion was joyful anticipation compared with my feelings when invited by the Editor to write an article in reply to the one which appeared in *The Motor Cycle* of June 29th. entitled "Ladies in Colonial Type Trials."

In spite of the abject terror which overwhelms me at the thought of "seeing myself in print" for the first time, I cannot refuse his invitation, because all my fighting instincts were roused by the article in question, not only on my own behalf, but also on behalf of all the other women who ride in competitions, many of whom are both infinitely more experienced and more efficient than I.

Advantage of the Lightweight.

Personally I have always been of the opinion that if a woman enters for open trials she should be able to control and handle her machine at least as efficiently as the average male rider, otherwise she is apt to become a nuisance, and is certainly better employed elsewhere. For this reason I have so far chosen my mounts from among the lightweights, because, much as I should like to feel six or eight horses beneath me, I am by no means sure that I should be able to set them on their feet again if they did happen to fall with me. Moreover, my experience of the spirit of camaraderie which exists among competition riders is such that I feel convinced that if one of my fellow-competitors saw me lying prone beneath a large and heavy motor cycle he would at once get off and come to my assistance, even in a non-stop section; and if this ever happened I should be so overcome with grief and shame that I should hie me to my home and to the humble and arduous push bike.

Fortunately for me, however, that moment has not yet arrived, as I can lift my latest mount, the 247 c.c. Levis, clear of the ground by my own unaided efforts.

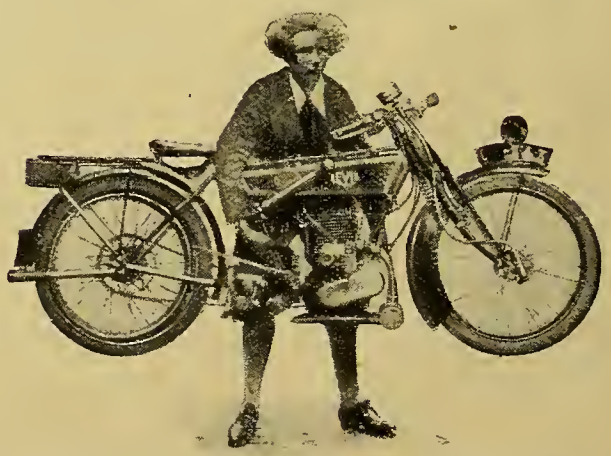
Talking of the Levis, how does the Butterfield firm do it? My little machine is a perfect wonder; it will do 54 m.p.h., anything between 35 and 45 m.p.h. up most main road hills; it is a dream for fast cornering, and is delightful to handle over treacherous surfaces. It has done about 2,000 miles of real heart-breaking work for me now, and has so far given me no trouble. Moreover, there is nothing "special" about it; it is just a standard model.

Stability.

At this juncture I feel that it behoves me to bestow a word of well-earned praise on its present stable companion, the Ner-a-car, otherwise the latter may do what it has never done before and throw me off the next time I ride it over an "observed section." There is no need for me to boast that I can carry it under one arm, because it is too stable to make it necessary.

To return to what was originally intended to be the subject of this article. I am afraid I do not agree that "in open trials of the rougher variety her (the lady rider's) presence is seldom of value from a propaganda point of view." My experience is that to the average member of the public, *i.e.*, to the potential buyer, the fact that a machine can be handled by a woman under severe trials conditions is a sure proof that the said machine must be supremely efficient in every way and capable of being handled by himself to perfection.

(MRS.) G. M. JANSON.



That a lady has no real difficulty in "holding-up" a motor cycle is demonstrated by this picture of Mrs. Janson and her Levis

WHAT OTHERS THINK.

MRS. JANSON is by no means alone in her belief. Several other views on the subject are appended, including an interesting letter from Mrs. O. M. Knowles, another well-known and successful rider of solo machines in all kinds of trials.

Further opinions on the subject are invited from our readers.

Club Trials too Easy.

Sir,—I am not at all sure that the article in your issue last week with the above title was not written as a bait to try and raise our hackles. In any case, I should like to put in a word in favour of my own sex.

Perhaps, from a trade point of view, it may be inadvisable for a firm to enter a machine ridden by a lady in a colonial trial; but what about the private owner who enters for the sport of the thing? For my own part, I am not interested in the "propaganda point of view," and am quite indifferent whether or no the public is edified by my antics "amidst rocks and boulders." I ride solely because a really difficult trial gives me the same pleasure as a stiff day across country on a horse at the tail of hounds. Should we confine ourselves to our own club events, we might find our only "sporting" rides a fifty or sixty mile reliability trial, riding to split seconds on a main road. As to your writer's complaint that a lady caused six other competitors to be baulked on an observed section in a recent trial before she was able to remove her machine after a fall, are ladies the only people who ever offend in this respect? Of course not. In nearly every big trial something of the same nature occurs, and the offender is a man, and if this happens on an observed section the observer is there to register a baulk. I consider everything possible should be done to encourage the lady rider to compete in trials and demonstrate to her sisters that a motor cycle is no more difficult than a car.

(Mrs.) OLIVE M. KNOWLES.

In the Limelight.

Sir,—There are many ladies who do infinitely better than the majority of males over stiff reliability courses, but, unfortunately, there are usually few who enter, as in the Scottish Six Days, and therefore they are very much in the limelight; but many men—not novices—do even worse than the ladies, and no mention is made of them.

This is quite contrary to your favourable criticism of a run early this season when you advised *mere males* to *look* to their laurels.

A B.S.A. RIDER.

Men Sometimes Need Help.

Sir,—A point you have not taken into consideration is that quite a large number of men in trials have baulked their fellow competitors and fallen off in such a manner that they have needed assistance to manage their unmanageable machines.

Considering how few ladies ride in trials, and all of them in the limelight, I think they deserve the highest praise for their efforts, and not adverse criticisms calculated to discourage them and others of their sex who contemplate competing.

SILENCER.

Wallasey.

ONE PASSENGER PER 100 c.c.

A DECADE ago, to attach a sidecar to a 500 c.c. machine was regarded as cruelty to motor cycles, but the general adoption of change-speed gears extended the range of usefulness of this then popular size of engine. Since those days the single-cylinder machine of 500 c.c. and over has developed into the family sidecar of which so many thousands are to be seen on the road.

Economy is the keynote of motor cycling, and as engine efficiency has so greatly increased of recent years it is not surprising that the 350 c.c. type has secured a foothold in the category of practicable sidecar outfits. The term "practicability," however, is very broad and may be interpreted very differently by various persons.

By some it is considered reasonable to expect an engine to be capable of propelling one passenger per horse-power, or, in other words, one person per 100 c.c. capacity. Quite recently I saw a 124 c.c. Skootamota with a miniature sidecar attached, and as the passenger was very young indeed he or she can be regarded as a quarter of an adult. Thus the Skootamota as a passenger machine gave a performance of 100 c.c. per passenger.

A Family Outfit of 225 c.c.

For several years an employee of the James Co. has used a 225 c.c. James lightweight and sidecar as a family outfit, carrying his wife and child, *plus* luggage, on really serious tours. Here again we have 100 c.c. per passenger, counting the juvenile member of the party as one-quarter adult.

Quite a number of 350 c.c. machines are in use as sidecar mounts, but few riders care to carry three adults and a child. It is done, nevertheless, and on a recent Sunday I saw on the Portsmouth Road a Beardmore Precision sidecar with this load, which the machine was arranged to carry, a pillion seat being fitted for the third adult, and a hammock for the child.

On several other occasions I have seen 350 c.c. machines with similar loads, but have always considered that the owners have been inviting trouble, for while *modern engines may be capable of a load equal to one passenger per* 100 *c.c., the frames of all lightweight motor cycles fitted with* 350 *c.c. engines are not made for such loads.* Anyone contemplating using a motor cycle of this size with a sidecar should ascertain whether the frame is suitable for sidecar work.

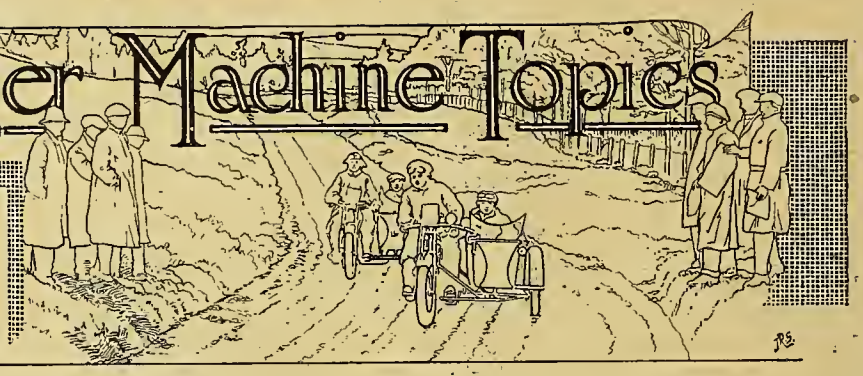
Reverting to the question of 100 c.c. per passenger, when we reach the 500 c.c. class one would not think of regularly carrying five adults while the big twins of 1,000 c.c. are never called upon to propel a load equal to ten persons.

175 c.c. per Passenger.

A little consideration will show that 100 c.c. per passenger is rating even modern engines and frames too high, and 175 c.c. is nearer the line which may be regarded as satisfactory. If we accept this, then no machine under 350 c.c. should carry more than two persons, and even at this a load of over five adults for a big twin of 1,000 c.c. seems too high.

It is difficult to make a rule which applies to every size of engine, for it will be appreciated that, while 350 c.c. sidecars are to-day giving every satisfaction with two persons, as are 550 c.c. machines with three adults, when we double the load we come back to where we were ten years ago and re-commence to ill-treat the motor cycle. The inference to be drawn is that the smaller engines have developed considerably more than the larger, and especially the largest, types.

Passenger Machine Topics



The Pleasures of Buying.

By "FRIAR JOHN."

Capabilities of the Lightweight Sidecar and the Powerful Twin Outfit.

BUYING the first motor cycle is, for the boy in his teens, a great adventure. The excitement of that walk with pater down the enchanted aisles at Olympia, glowing in the knowledge that the edict has gone forth in his favour and that a cheque will be forthcoming at the critical moment, can only happen once in a lifetime. Those are champagne days of existence, full of fizz, with life in front as a great adventure.

There is a gap of many years between that picture and the picture of the married man scanning the sidecars with an eye to accommodating an extra child or two. Still, that is good fun, too; perhaps not such a heady occupation, but one fraught with great possibilities and interest. With the family man, then, I am most concerned: besides, he will be far more willing to take a hint, if the hint be worth taking, than the youth would be. For, of course, in these days no one, if he is wise, advises youth.

Selecting an outfit is no light affair; it is an undertaking to be approached in the right spirit, just the same as when one selects his wines, or the new roses for autumn planting, or even his wife; to get the most enjoyment, that is, out of the affair.

Price is the ruling factor in all purchases. We are, nearly all of us, bound down to a limit, and the adjustment of our desires to that arbitrary sum is the very deuce at times. We would all have the fastest, most comfortable, most fully equipped outfit on the road if we could afford it; because one cannot, one gets the nearest to the ideal, which may be a single-geared, two-stroke sidecar outfit.

I HAVE more than once been asked whether it is better policy to buy new or second-hand. Obviously that question cannot be answered briefly; it depends on one's views. If there is a family to accommodate and the price limit is £60, a new outfit is impossible, whereas it is quite possible to pick up a second-hand outfit for that amount capable of taking a family comfortably—a child on the carrier and one in the sidecar.

A 2¾ h.p. two-stroke outfit can be bought for £75, and one which will prove quite a serious proposition for touring. A few years ago few would attempt to tour in Wales with a light two-stroke sidecar carrying passenger and luggage. But I would not hesitate doing so myself, providing I had a sporting passenger—a passenger who did not require a score of dresses and other paraphernalia piled on the grid.

Awhile ago I tried out a 2½ h.p. Verus outfit for many miles, and was astonished at the high average road speed that could be maintained on the machine with a fairly heavy passenger. I was accompanied by a 1919 A.J.S., the driver of which did not cut down his speed to accommodate me. Certainly this type of mount is admirable for the man who prefers to start motoring with a new machine, yet whose limit is about £70.

THE advantage of the little two-stroke sidecar (on a 4,800 mile season's running) over the big twin is almost 1½d. a mile, counting every cost, and including depreciation and loss of interest. Two-stroke two-speed outfits can be bought at £70 upwards, but they are not meant to accommodate extra passengers. The fitting of a screen, too, should be done with care, as wind resistance is a greater factor against successful work with low-powered machines than is mere weight. In a few years' time, perhaps, 250 c.c. may do as much as 500 c.c. of to-day, but a lightweight is to be treated as the baby it is—a lusty one, truly, when it can average 50 m.p.h. in the T.T., but still an infant and not to be abused. The 350 c.c. two- and four-stroke sidecar outfits are not built to accommodate families; neither the frame of the cycle nor the chassis of these small outfits will sustain abuse for long, but those of over 499 c.c. are case-hardened to abuse. Veterans of this capacity, even ten or twelve years old, still plod along the highway carrying their forty stone of humanity. Old Bradburys issued from the Mint half a score years ago, old Triumphs, ancient Rexes or Humbers with the epicyclic hub gears, their clutches slipping on every hill, and many other makes (all juveniles together ten years or so ago), still are to be seen in the most outlandish places. So it is evident that the modern 500 c.c. type must be capable of almost anything that is required of it.

IN the 499 c.c. size one may spend anything from £100 to £160 for an outfit without accessories. Every type, too, is offered: four-stroke single and twin, two-stroke air-cooled and water-cooled, flat-twin

Passenger Machine Topics.—

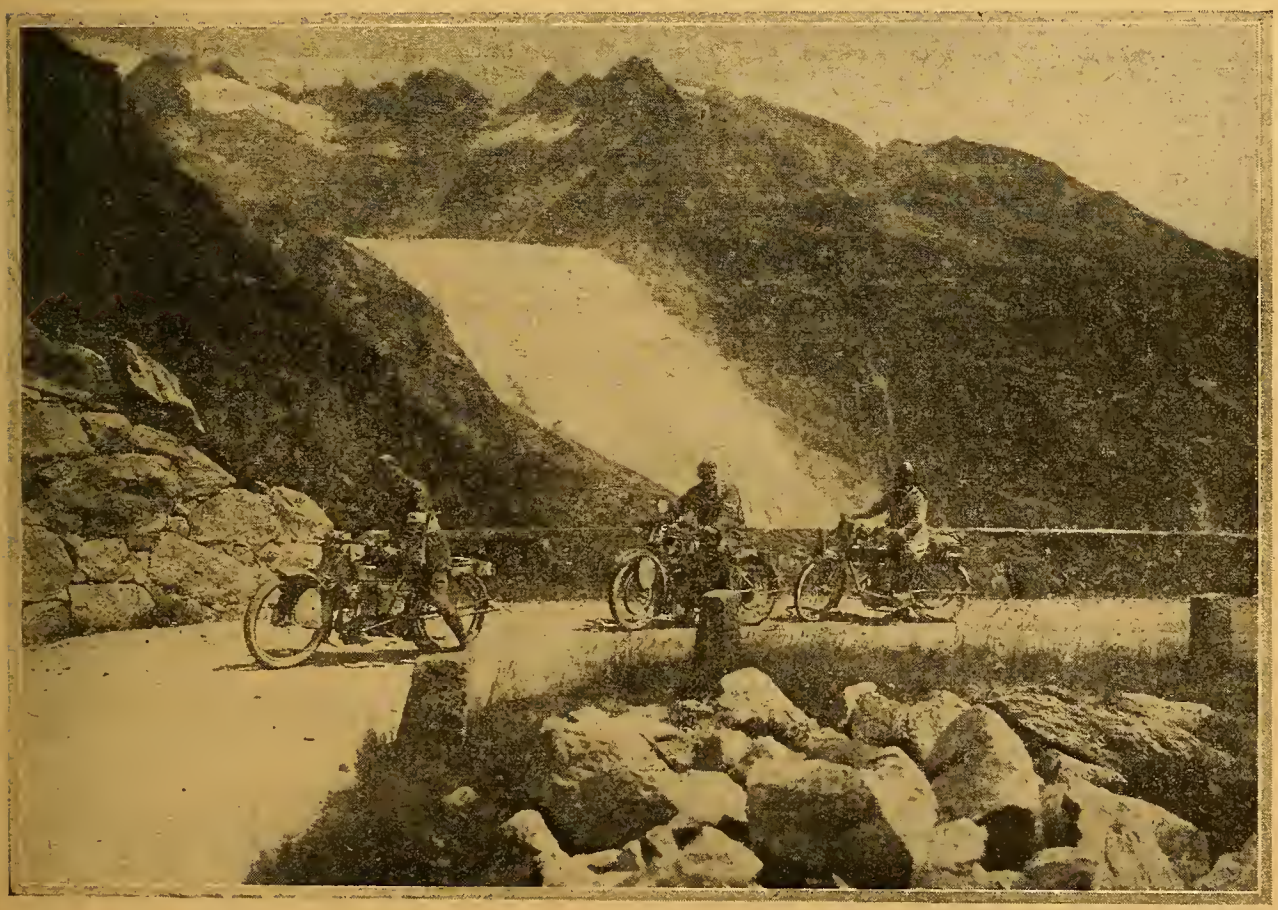
o.h.v. and side-by-side valves. An amazing range of sidecars also is presented by makers to-day.

500 c.c types cost ¾d. a mile less to run than the powerful twin on a 4,800 mileage per year, reckoning depreciation and loss of interest.

Several makers, recognising the popularity of the single cylinder of moderate capacity, have concentrated their efforts in producing a complete outfit to sell in the neighbourhood of £100. These machines are of a type which has long ago proved its suitability for hard passenger service.

WHAT an array of fine outfits there are from which to select when there is no price limit, especially if the question of accommodating extra passengers has not to be considered. This being the case, one can select the fleetest machine and a low sporting body—a body comfortable but offering little wind resistance—and what satisfaction there is in being able to show a clean pair of heels to anything on the road except big cars or "sports solos." To cruise along an ordinary highway at thirty or so with just a whiff of gas, to open out on the open, level road and to take fairly steep inclines at the run without a thought of changing down—these are some of the joys of touring with a powerful twin.

MORE often than not the man who purchases a high-powered outfit has the problem of passenger-carrying to consider—sometimes two, often three, occasionally four extra passengers have to be accommodated. It is a matter of personal opinion and fancy whether the carrier is utilised to accommodate one child, or a double-seated sidecar is obtained. I prefer to take the extra passenger in the sidecar. In fact, if I had to accommodate two children I should endeavour to find a sidecar that would enable me to do so. I have not been confronted with the problem of fitting three children and an adult into an outfit, but this is done frequently and satisfactorily. The various ways and means of accommodating children are many—too many to discuss in this short article. One might suggest this or that to a man seeking advice on this particular subject, then receive a direct contradiction to the advice. For instance, I may suggest to the man who wishes to travel cheaply, yet to accommodate five children and his wife, that he purchases a 10 h.p. machine and taxi-sidecar. The probability is that I receive a retort of this sort: "I have a 3½ h.p. outfit on which I take my family of five children and wife at a total cost of 1½d. a mile. You cannot have had actual experience with five children, or you would not have suggested an expensive outfit such as you have done."



A striking scene on the Col du Grimsel showing the magnificent Glacier du Rhone in the background. This route will be traversed by competitors in the International Six Days Trials, details of which are given on page 56.

SPEED TRIALS ON WESTCLIFF "PROM."

Eastern Centre A.C.U. Open Event Abandoned half-way through owing to rain.

Two-stroke *v.* four-stroke. R. O. Clark (486 c.c. Scott) and E. A. Marshall (496 c.c. Matchless) in the class for solo machines not exceeding 750 c.c.

IT requires very little to amuse the British public on holiday, which is perhaps why such a huge crowd of spectators was attracted on Wednesday of last week to the Eastern Centre A.C.U. open speed trials on Westcliff Promenade.

As a spectacle the meeting was nothing above the average event of its kind—which is not saying much—and even to the motoring enthusiast it suffered from the prevalent malady of the Essex clubs—multiplicity of classes.

Granted that, until a leaden sky fulfilled its ominous promise at about four o'clock, the affair was being run off with considerable expedition, twenty-five distinct motor cycle classes—each sub-divided into four (members, open, time, formula) for the purposes of results—seems to savour too much of providing prizes for everybody. Additionally, by making matters complicated to follow, it robs interest when there is not over-much to start with.

Unfought Duels.

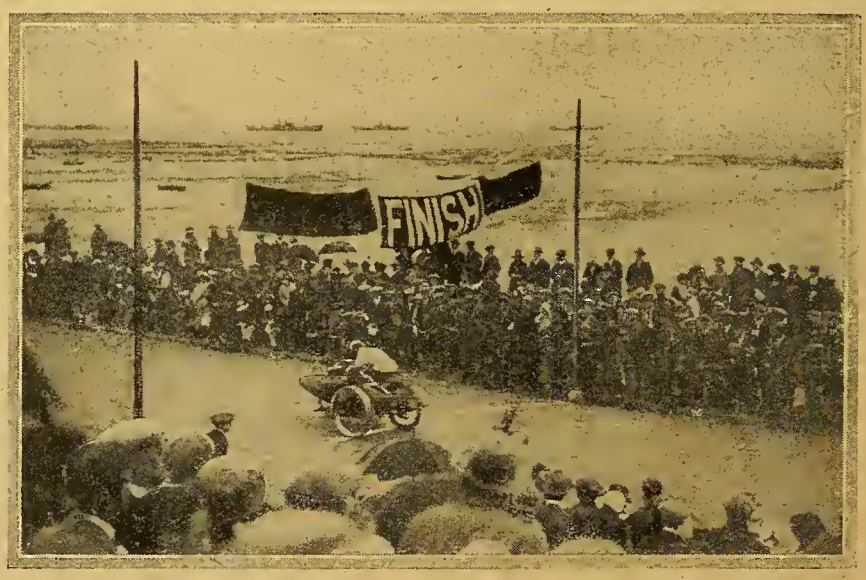
The compulsory curtailment of the trials was particularly annoying, for most of the possible excitement was apparently concentrated in one or two classes which were not run. F. W. Dixon (989 Harley-Davidson), E. Remington (998 Blackburne), and D. H. Davidson (998 Indian) were to have competed in one of the unlimited solo classes, and most people wondered how their times would compare with G. A. Vandervell's (Norton) and S. J. Bassett's on a very special A.B.C. Bassett, incidentally, caused some surprise by beating C. G. Pullin (746 Douglas) in a 750 c.c. class, and he would probably have won more firsts had he permitted his name to appear as frequently in the programme as did some of the others.

Again and again it happened, as may be observed by studying the appended results, that "members" made better performances than those in the open category of the same class. Amongst others to shine in this respect were E. Baldwin (499 Sunbeam), H. Baldwin (499 Sunbeam), W. H. Norris (698 Raleigh), L. F. McCardie (998 Harley-Davidson), L. F. Peaty (349 Hawker), T. B. Hensman (490 Norton), F. R. Cotgrove (349 Sheffield Henderson), P. F. Calcut (494 Douglas).

In the three-wheeler classes E. B. Ware (Morgan) enjoyed a series of walk-overs, a "Reindeer" entered by H. J. Fisher failing to materialise.

Fastest motor cycle time up to the abandonment of the meeting was made by G. A. Vandervell (490 Norton), his figure of 37 1-5secs equalling a speed of 60½ m.p.h. Unless the course measured more than the supposed kilometre, this seems slow, but the flying start was very short.

In one of the 500 c.c. divisions there were a number of riders, mainly amateurs, mounted on various popular



L. F. McCardie (988 c.c. Harley Davidson) crossing the finishing line in the event for unlimited sidecars.

Speed Trials on Westcliff "Prom."—

makes, and as a matter of interest we append the speeds of all :—

490 c.c. Norton, 60.46 m.p.h.
490 c.c. Norton, 53.01 m.p.h.
494 c.c. Douglas, 51.31 m.p.h.
499 c.c. Triumph, 51.31 m.p.h.
490 c.c. Norton, 49.49 m.p.h.
349 c.c. Coventry Eagle, 49.49 m.p.h.
486 c.c. Scott, 49.49 m.p.h.
349 c.c. Hawker (o.h.v.), 48.84 m.p.h.
349 c.c. Weatherell (o.h.v.), 48.00 m.p.h.
490 c.c. Norton, 47.59 m.p.h.
499 c.c. Triumph, 47.59 m.p.h.
248 c.c. New Imperial, 47.59 m.p.h.
248 c.c. New Imperial, 47.39 m.p.h.
490 c.c. Norton, 46.41 m.p.h.
494 c.c. Douglas, 46.41 m.p.h.
490 c.c. Norton, 44.16 m.p.h.
499 c.c. Rudge-Multi, 39 m.p.h.

There is no need to comment on this table except to remark that some riders obviously know more about tuning than others; or that probably the "others" are careless.

After the event a dinner was arranged at the Queen's Hotel, but was not so well attended as might have been.

The time results were as follows :—

STANDARD TOURING CLASSES.

350 c.c. Solo.—Open: 1, S. M. Greening (348 Francis-Barnett), walk-over, 56⅖s. Members: 1, N. A. Lowe (350 Coventry Eagle), 54⅗s.

500 c.c. Solo.—Open: 1, S. M. Greening (348 Francis-Barnett), walk-over, 50⅗s. Members: 1, E. Baldwin (499 Sunbeam), 48s.; 2, H. Baldwin (499 Sunbeam), 50⅕s.

750 c.c. Solo.—Open: 1, S. M. Greening (348 Francis-Barnett), walk-over, 53⅕s. Members: 1, E. Baldwin (499 Sunbeam), 48s.; 2, H. Baldwin (499 Sunbeam), 49⅕s.; 3, W. H. Norris (698 Raleigh), 50⅕s.

Unlimited Solo.—Open: 1, S. M. Greening (348 Francis-Barnett), walk-over, 53s. Members: 1, L. F. McCardie (998 Harley-Davidson), 42⅕s.; 2, W. H. Norris (698 Raleigh), 50s.; 3, H. Baldwin (499 Sunbeam), 51s.

SPORTS MODELS TOURING CLASSES.

250 c.c. Solo.—Open: 1, H. F. Edwards (248 New Imperial), 42⅗s.; 2, S. M. Greening (248 Francis-Barnett), 45⅖s.; 3, C. M. Fairweather (248 Coulson-B.), 46⅕s. Members: Same as open class.

300 c.c. Solo.—Open: 1, E. Remington (349 Edmund-Blackburne), 40⅗s.; 2, F. R. Cotgrove (349 Sheffield-Henderson), 43s.; 3, R. Weatherell (349 Weatherell), 50⅖s. Members: 1st and 2nd same as open class, but 3 L. F. Peaty (349 Hawker), 46s.

500 c.c. Solo.—Open: G. A. Vandervell (490 Norton), 37⅕s.; 2, A. C. Rhodes (499 Triumph), 43⅗s.; 3, J. V. Prestwich (349 Coventry-Eagle), 45⅕s. Members: 1, G. A. Vandervell (490 Norton), 37⅕s.; 2, T. B. Hensman (490 Norton), 42⅕s.; 3, P. F. Calcut (494 Douglas), and A. C. Rhodes (499 Triumph), tied, 43⅗s.

750 c.c. Solo.—Open: 1, G. A. Vandervell (490 Norton), 37⅖s.; 2, A. C. Rhodes (499 Triumph), 45s.; 3, C. G. H. Dunham (490 Norton), 48⅘s. Members: 1, G. A. Vandervell (490 Norton), 37⅖s.; 2, F. R. Cotgrove (349 Sheffield-Henderson), 42⅖s.; 3, P. F. Calcut (494 Douglas), 43⅖s.

Unlimited Solo.—Abandoned owing to rain.

Unlimited Sidecars.—Open: 1, W. J. Barker (1301 Henderson sc.), 50⅖s. Members: 1, L. F. McCardie (988 Harley-Davidson sc.), 47⅖s. (N.B.—McCardie did not enter for the open class.)

ANY TYPE CLASSES.

250 c.c. Solo.—Open: 1, J. V. Prestwich (249 New Imperial-Jap), 47s. Members: 1, J. V. Prestwich (249 New Imperial-Jap), 47s.; 2, C. M. Fairweather (249 Coulson-B.), 47⅖s.

500 c.c. Solo.—Abandoned owing to rain.

750 c.c. Solo.—Open: 1, S. J. Bassett (398 A.B.C.), 38s.; 2, C. G. Pullin (746 Douglas), 39s.; 3, E. A. Marshall (496 Matchless), 42⅕s.. Members: 1, C. G. Pullin (746 Douglas), 39s.; 2, E. A. Marshall (496 Matchless), 42⅕s.; 3, J. Day (490 Norton) 43⅘s. (N.B.—Cotgrove on a Sheffield-Henderson took 42⅕s., but was only entered on formula.)

1,000 c.c. Solo.—Abandoned owing to rain.

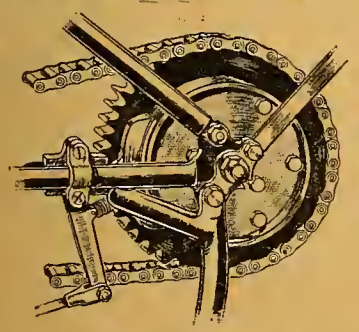
600 c.c. Sidecars.—Open: 1, C. G. Pullin (496 Douglas sc.), 47⅕s. Members: 1, C. G. Pullin (496 Douglas sc.), 47⅕s.; 2, K. Duncan (492 Sunbeam sc.), 49s.

NEW LIGHTWEIGHT SPORTS MODEL.

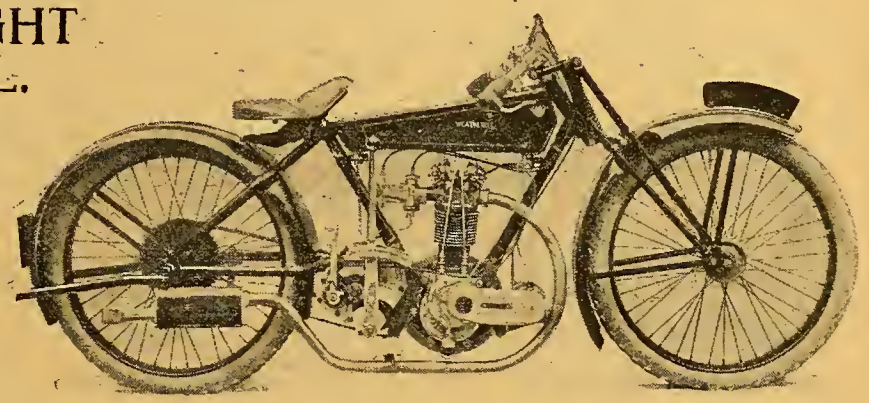
Weatherell Machines with Blackburne Engines; Float Feed Lubrication System.

REALISING the popularity of the 350 c.c. fast touring machine, Mr. R. W. Weatherell has placed on the market one of these which bears his name. The motive power is supplied by a 349 c.c. Blackburne sports engine (71×88 mm.) with overhead valves. Great care has been exercised in the construction of this machine, and it will be noted, on referring to the photograph, that the exhaust pipe is led away with an easy curve in which there are no acute bends, and it finally terminates in an expansion chamber of ample dimensions and a short extension pipe.

Miralite aluminium alloy is used in all cases where aluminium would be ordinarily employed; this is exceedingly tough metal, having a tensile strength of 14 tons. It is used for the magneto bracket, silencer end, and similar purposes.



A simple and effective brake; bolted to the rear sprocket is a steel drum to which a Ferodo-lined shoe is applied; it is brought into operation by a cam action.



Fitted with the Moss gear box, clutch, and kick-starter, and with a well-designed silencer arrangement, which should combine quietness with absence of back pressure, the 349 c.c. Weatherell has many points of distinction.

A feature of the Weatherell is the double top tube, which makes for lightness in construction and stops whipping. Particular attention has been paid to the brakes, which are both of similar design, and consist of a Ferodo-lined shoe applied by means of a cam action to a steel drum—in the case of the rear brake bolted to the rear wheel sprocket.

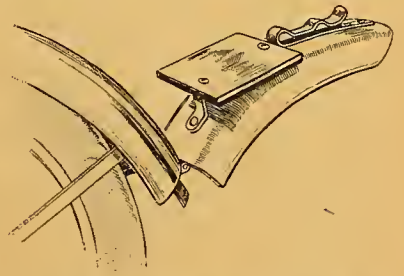
Steel is the material used for the engine plates, and 14 gauge tubing is employed practically throughout the frame construction.

Automatic Lubricating System.

Simplicity is one of the chief points about the lubrication system, that employed having already been described in *The Motor Cycle* under the name of Jebon. It consists of a chamber, containing a float, bolted on to the crank case and communicating with it. This device is also connected with the oil tank and works on the same principle as a carburetter float chamber, maintaining a constant level of about ¼in. depth in the crank chamber.

Other points about the machine are the width of the mudguards and the employment of flat strips as stays, while a considerable portion of the rear guard can be hinged back so as to allow access to the tyre.

Mr. Weatherell, Terrace Works, High Road, Kilburn, London, N.W.6, is shortly placing on the market a 698 c.c. Blackburne twin sports model, which has the same dimensions (71×88 mm.) as the 349 c.c. model just described for each cylinder.



The rear portion of the back mudguard can be lifted up to allow inspection of the rear tyre.

RELIABILITY TRIALS IN THE ALPS.

Details of the International Six Days' Event to be held in Switzerland Early in August.

On the Col du Bruck, the scene of this year's speed hill-climb in the International Six Days Trials.

BRITISH manufacturers and riders have more than a little interest in the International Six Days Trials.

The suggestion that such an event should be held came from this country at a meeting of the International Federation of Motor Cycle Clubs in 1912, and the trials are practically the direct descendants of the old international cup race of 1904. The idea of turning the premier international event into a reliability trial was due to the fact that in 1912 it was felt by all those concerned that greater encouragement should, on the whole, be given to reliability than to speed.

International Trials Before the War.

Since their institution the International Six Days Trials have had a chequered career. In 1913 the event was held in conjunction with the English Six Days and attracted one international entry—from the French firm of Clément, whose machines were found to be quite unsuitable for the Lake District. The next year's event was heralded with every promise of success, and a thoroughly representative British entry was obtained, while many of the riders had actually started for the scene of the trial (Grenoble) when suddenly war broke out and nothing more was heard of the event until 1920. This was too soon after the European turmoil, and only two teams entered—France and Switzerland.

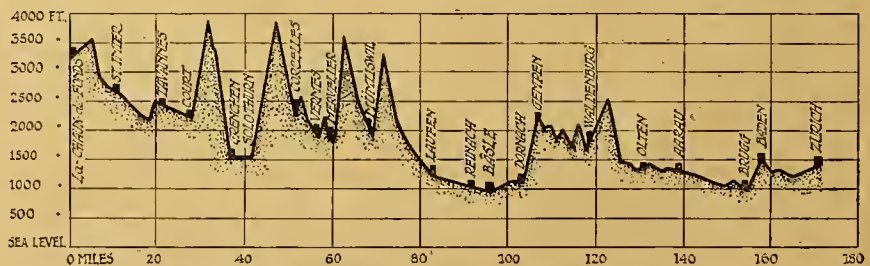
Last year an excellent British team was sent, and it put up a first-class fight, but tyre troubles were the principal cause of its undoing, and the Swiss sportsmen still retained the cup presented for the trials ten years ago by the British Cycle and Motor Cycle Manufacturers' and Traders' Union.

Teams from Five Countries this Year.

It is up to Great Britain this year to wrest the cup from its present holders. France, Sweden, and Italy have already promised to come in and make the event more interesting and give it a stronger international flavour. The trials are held in the country of the cup holders.

Motor cyclists who desire a Continental holiday could not do better than enter this trial, which takes place between August 3rd and 9th, and passes through the most beautiful parts of Switzerland.

Manufacturers also who have any consideration whatsoever for their overseas market can learn much more in this event than in any held in the British Isles. Conditions are totally different; severe gradients are few and far between, but such tests of cooling, carburation, and braking powers occur that do not obtain elsewhere. Such is the opinion expressed by one of our best known riders who took part last year.



Contour of the second day's run, from La Chaux-de-Fonds to Zurich.

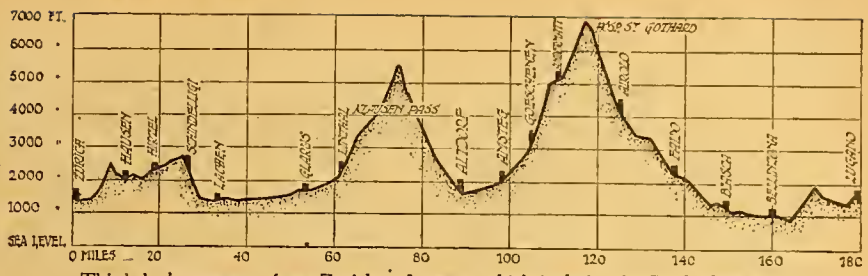
Reliability Trials in the Alps.

A machine suitable for the trials should be capable of climbing a 20-mile ascent with an average gradient of 1 in 20-30 without showing signs of distress, should have good carburation at an altitude of 6,000 ft. above sea level, and must have excellent brakes, as the descents are naturally as long as the ascents, and are often in the form of zig-zags which entail rapid braking on every corner.

Starting from Geneva.

As last year, the trial starts from Geneva, and practically the same route is followed. Geneva is left at 8 o'clock in the morning of August 3rd.

On August 1st and 2nd, when the weighing-in and examination of machines will take place, there will be important festivities in the town of Geneva in connection with the various aeronautical events preparatory to the Gordon-Bennett trial, which starts from Geneva on August 6th.



Third day's contours, from Zurich to Lugano, which includes the St. Gothard Pass.

It has now been definitely stated that the British team will consist of A. Bennett (499 Sunbeam), H. F. Harris (349 A.J.S.), and G. S. Davison (247 Levis). It will be noticed that H. F. Harris is riding in the place of Sheard, winner of the Junior T.T. Other British entries are the following: Eric Williams (349 A.J.S.), three Raleighs, F. W. Giles (349 A.J.S.), Lt. Glen Kidston, R.N. (499 Sunbeam), Clifford Wilson (654 Quadrant), and W. W. E. Clark (654 Quadrant).

Entries, which close at ordinary fees on Saturday, should be sent to the Secretary, The Auto-Cycle Union, 83, Pall Mall, London, S.W.1.

On the day following the conclusion of the trial, August 10th, the F.I.C.M. congress will take place, at which various matters connected with motor cycling will be discussed.

OFFICIAL RESULTS OF MIDLAND CENTRE (A.C.U.) TRIAL.

53 gold, 16 silver, and 2 bronze medals. B.S.A. and Beardmore-Precision share team prize.

THE official results of the recent open one-day trial organised by the Midland Centre (A.C.U.) are now to hand. 53 gold, 16 silver, and 2 bronze medals have been awarded. Two teams tied for the team prize, *i.e.*, the B.S.A. team, consisting of B. L. Bird, H. S. Perry, and J. H. Walker, and the Beardmore-Precision, comprising H. G. Greaves, L. A. Bees, and E. R. Jacobs.

GOLD MEDALS (SOLO).—P. L. Mayo (249 Coventry Eagle), B. Kershaw (249 New Imperial), J. W. Moxon (293 Monopole), F. W. Viles (349 Raleigh), H. Gibson (349 Raleigh), A. W. Thrush (499 Sunbeam), J. G. Orford (349 Henley-Blackburne), J. T. Bashall (678 Martinsyde), A. A. Symes (496 Martinsyde), R. W. Duke (499 Triumph), A. R. Edwards (211 Levis), R. C. Cooper (269 Allon), W. Johnson (269 Allon), H. J. Stretton Ward (499 Triumph), J. H. Walker (557 B.S.A.), A. Bennett (482 Sunbeam), W. H. Woodcock (499 Ariel), A. Rollason (499 Ariel), B. Lycett (249 New Imperial), R. I. Pinson (499 Sunbeam), W. G. Hough (398 A.B.C.), J. Whalley (349 Massey-Arran), J. A. Watson-Bourne (976 Brough-Superior), H. Radford (688 Coventry Victor), A. R. Evans (499 Sunbeam), G. E. Austin (688 Coventry Victor), H. Greaves (349 Beardmore), E. R. Jacobs (598 Beardmore-Precision), F. C. Parkes (225 Sun Vitesse), M. Bishop (225 Sun Vitesse), C. T. Hollyoake (269 Federal), R. C. Bennett (269 Federation), J. N. Roberts (249 New Imperial), H. V. Collins (654 Brough Superior), P. G. Dallison (370 Connaught), G. Kunn (595 Douglas).

GOLD MEDALS (SIDECARS).—H. G. Uzzell (976 New Imperial sc.), T. R. Cibbins (999 Rex-Acme sc.), B. L. Bird (557 B.S.A. sc.), H. S. Perry (770 B.S.A. sc.), P. W. Bischoff (550 Sunbeam sc), F. W. Giles (800 A.J.S. sc.), F. Smith (925 Clyno sc.), L. A. Bees (598 Beardmore-Precision), W. J. Montgomery (976 Brough Superior sc.), T. F. Blomfield (796 Ariel sc.), G. C. Beesley (550 Sunbeam sc.,) A. Watson (550 Sunbeam sc.).

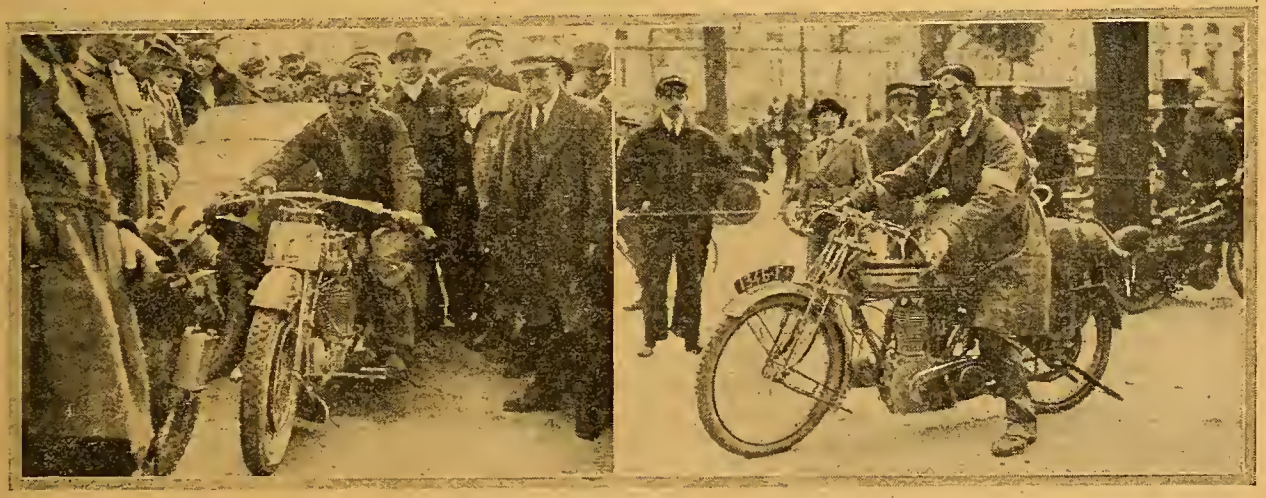
GOLD MEDALS (CYCLE CARS).—B. Bourke (1098 New Hudson), W. Ridley (1098 New Hudson), F. S. Spouse (1098 T.B.), F. B. Roberts (1098 Morgan), N. Norris (1098 Morgan).

SILVER MEDALS (SOLO).—Mrs. G. M. Janson (247 Levis), F. D. Scott (654 N.U.T.), E. Foster (698 Raleigh), G. Dance (499 Sunbeam), H. G. Catterall (595 Indian), C. Webb (293 Robust), W. H. Parkes (225 Sun Vitesse), A. J. Smith (370 Calthorpe), J. P. Brettell (370 Connaught), F. V. Wood (370 Connaught), B. Webb (293 Monopole-Jap).

SILVER MEDALS (SIDECARS).—T. H. Weaver (269 Sirrah sc.), F. H. Brown (499 Rex-Acme sc.), S. R. Philpot (678 Martinsyde sc.).

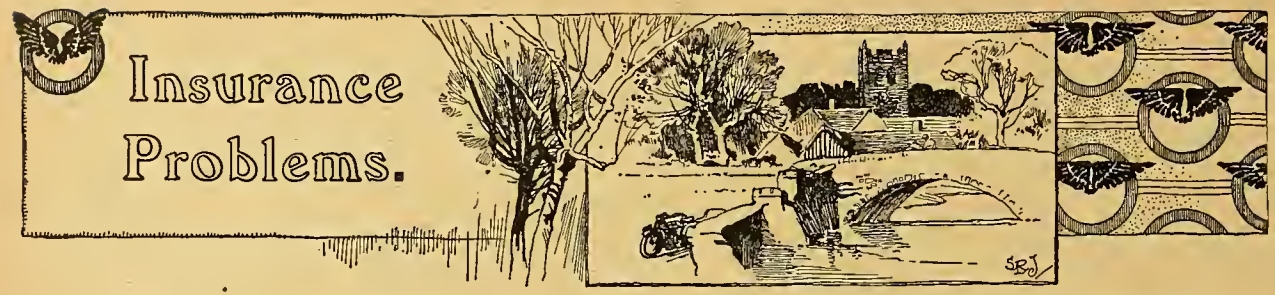
SILVER MEDALS (CYCLE CARS).—W. E. Bayliss (1098 New Hudson), J. W. Meredith (1098 T.B.).

BRONZE MEDALS.—R. Simpson-Harvey (993 Matchless sc.), T. H. Bonham (370 Calthorpe).



BRITISH MOTOR CYCLES IN FRENCH TRIAL.

In the reliability trial from Paris to the Pyrennes the bulk of the machines were, as was to be expected, French, but the few British made mounts that were entered made excellent performances. (Left). Rigon (750 c.c. B.S.A.), who came through with a clean score, although the last twenty miles were covered with a flat tyre. (Right). Sabbon, a Norton rider, who completed the course.



A New Feature in which Insurance Questions are Answered and Discussed.

It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this new feature has been formed to deal impartially with the various problems that are presented to us.

The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enable "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.

Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.

Passenger in Sidecar. Mr. Charles Hewitt, Lincoln, asks a question relating to compensation in case of accident to children when travelling in the sidecar. He says *The Motor Cycle* Insurance Policy states that the extra premium for passengers in the sidecar covers persons not less than 15, or more than 56 years of age. Surely this is a most ridiculous and unfair clause.

The age limit mentioned is a usual one, and we do not know of any company which will grant personal accident insurance in respect of children. It must be borne in mind that this class of insurance is usually granted to indemnify the injured person in respect of his loss, and we presume that an insurance company will not consider a child can suffer pecuniary loss in this way.

* * * *

Hire of Motor Cycles. Mr. A. F. Abbott, on the question of short period of insurance, writes: "I have a motor cycle which I let out on hire, and I should be glad to know if you could give me the name of any insurance company who would put forward a scheme whereby each individual hirer, by paying a normal fee, could have the machine insured for the period hired.

We do not know of any company which would be willing to grant insurance on the lines you suggest, excepting under such circumstances which would probably make the premium much heavier than the hirer would be willing to pay.

* * * *

Accident to Owner. Mr. H. Hewett, Bradford, asks the following query: "Supposing I had just dismounted my sidecar and stood close to the machine (on my right side of the road), or was mending a puncture when a car caught me as it passed, causing injury, would the company compensate as an accident to owner?

The point raised is, of course, rather a fine one, as the usual wording under this section of the policy is "cover accidents sustained in direct connection with insured motor cycle." If, therefore, at the time of the accident, the insured was removing or putting on the tyre, the accident would apparently come within the cover granted, but if he were standing away from the machine and preparing a patch, for instance, then we are afraid the insurance would not apply.

* * * *

Acknowledging Responsibility. A Birmingham reader asks the following question on the point which many motor cyclists may have thought about when in a tight corner: "Presuming I knocked down a child that may or may not have been seriously hurt and I paid for a taxi and also the doctor's fee for first attendance, did I acknowledge responsibility by doing so? No one but an inhuman individual would do otherwise than take the injured person to the nearest doctor, and both the doctor and the taxi driver would want payment."

In such circumstances as these, we do not think that any insurance company would repudiate liability on the grounds that liability had been admitted by the insured. It would, however, undoubtedly be advisable in paying the doctor's fee, to point out that responsibility is not accepted, as a point of this description would probably be made a lot of at a later date should the injured person put forward a claim for compensation.

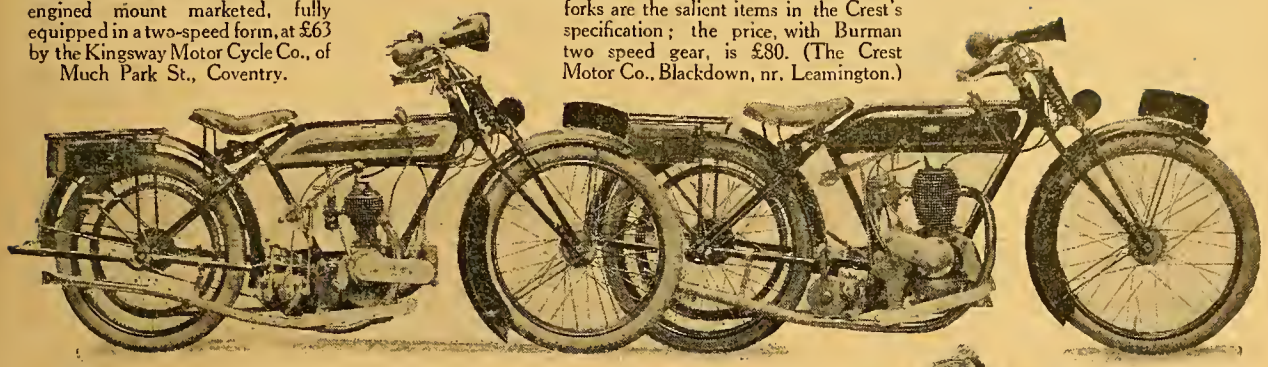
ILLEGIBLE MOTOR LICENCE CARDS.

Two motor cyclists who were charged under the Roads Vehicles Regulations for allowing licence cards to become defaced by the action of sun or rain were successfully defended, as members, by the A.A. The defending solicitor contended that, while the wording of Section 4 rendered it obligatory for the licence card to be carried so as to be clearly visible whether the vehicle was moving or stationary, there was no requirement that every letter or figure should be readable. It was thereupon argued by the police that under Section 12 of the Regulations, where a licence had become defaced the owner had to apply to the licensing authority for a duplicate. The solicitor, however, successfully repudiated this on the grounds that the prosecution was not brought under that regulation, and, in any case, that the particular regulation was "may," not "must," as suggested by the police.

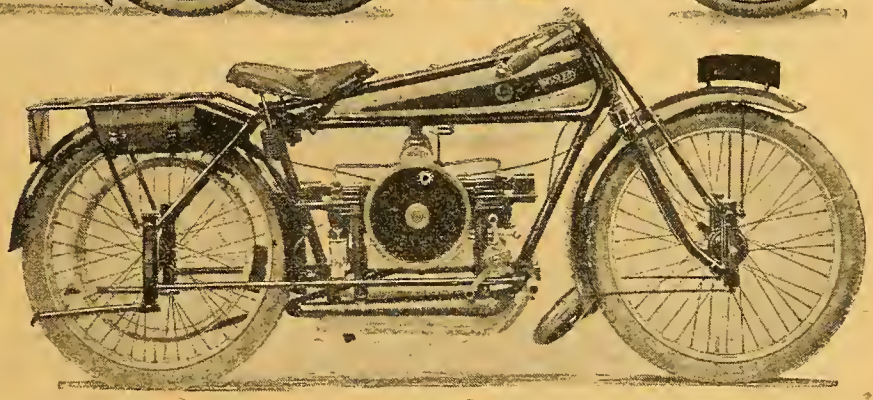
MID YEAR MODELS.

There is nothing unconventional about the Kingsway, a 293 c.c Jap-engined mount marketed, fully equipped in a two-speed form, at £63 by the Kingsway Motor Cycle Co., of Much Park St., Coventry.

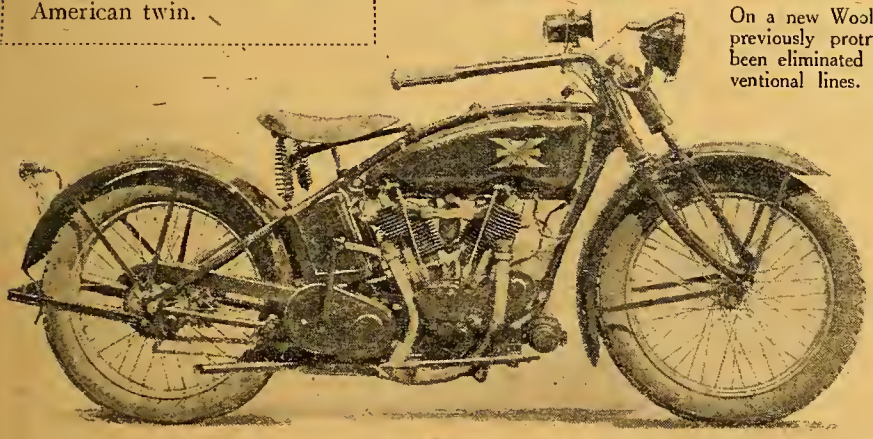
Barr and Stroud sleeve valve engine, Cox-Atmos carburetter, and Maplestone forks are the salient items in the Crest's specification; the price, with Burman two speed gear, is £80. (The Crest Motor Co., Blackdown, nr. Leamington.)



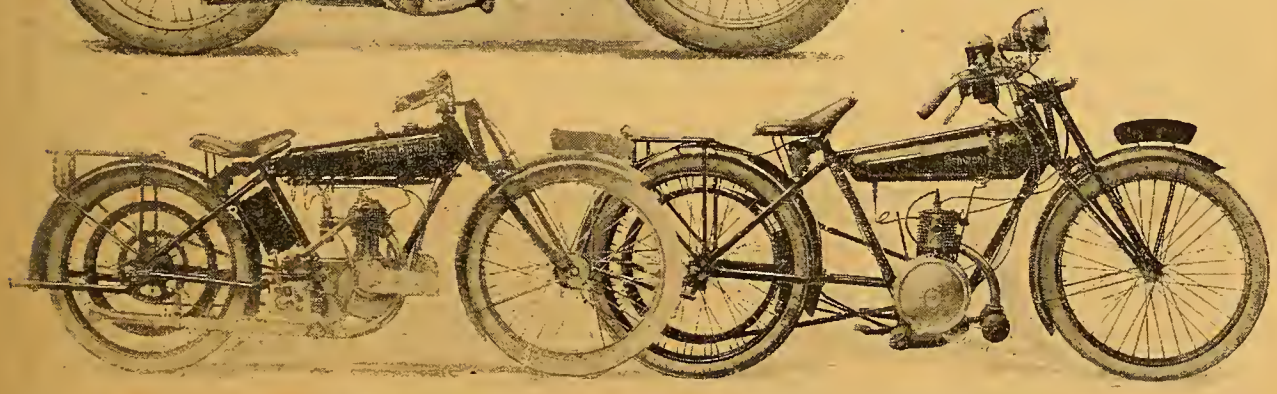
NEW names and new models under old names are continually appearing in the motor cycle world, but in no class more often than in that embracing light-weight solo machines. Five recently introduced models of this type are portrayed, and one of a modified American twin.



On a new Wooler that portion of the fuel tank which previously protruded in front of the steering head has been eliminated and the tank, still bulbous, follows conventional lines. (The Dederich-Wooler Engineering Co. Alperton, London.)

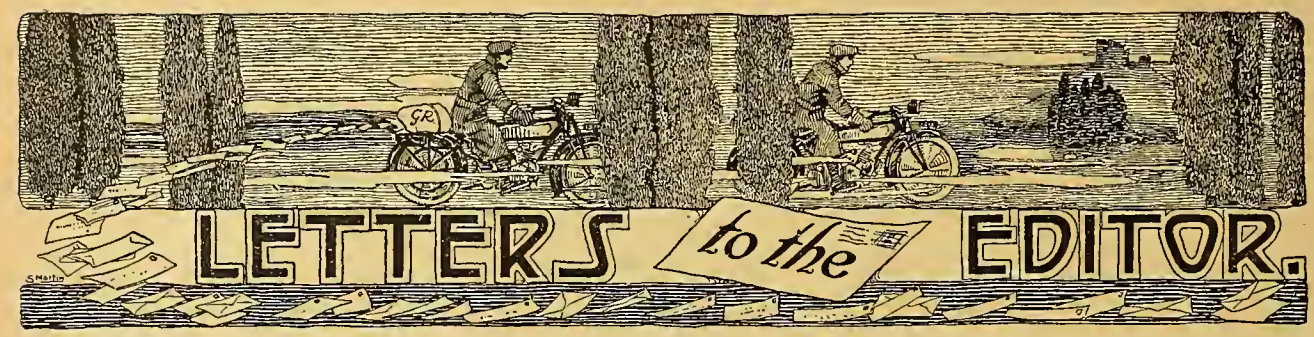


Dirt and dust excluding washers on the wheel-spindles, a stronger ammeter mounting behind the steering head, and an auxiliary hand pump-fed oil pipe to the crankcase are the chief modifications on the latest edition of the American X to arrive in this country. (Melchior, Armstrong & Dessau.)



Priced at £68, the latest Francis Barnett is a modified edition of the well-known sports model, a 293 c.c. Jap engine and two-speed gear box being fitted in this case. (Francis & Barnett, Ltd., Lower Ford Street, Coventry.)

The Beaufort relies on well-tried components; it is a Villiers-engined two-stroke selling with clutch at £40 15s., electric lighting £5 extra. (The Argson Engineering Co., Ltd., Beaufort Works, South Twickenham, Middlesex).



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

NOMENCLATURE.

Sir,—When are we to get back to the good old name for a maker's speed model, that is the T.T. Model? Pre-war motor cyclists must be sick of the present jumble of names —sports, super-sports, fast roadster, etc. W. B. TOBEY.

WHO ORIGINATED THE CRASH HELMET?

Sir,—Credit is given to Dr. Eric Gardner as being the originator of the crash helmet in 1914. I would point out that crash helmets were in very general use in aviation long before 1914.

The Warren helmet, produced by Mr. Warren, who ran a flying school at Hendon, came out in 1912, as also did the Brown helmet, produced by Messrs. Brown Brothers. Both these helmets are illustrated and described on page 349 of "Aeronautics" (Volume 5) of November, 1912.

PHILIP G. ROBINSON.

POWER LOSSES FROM OPEN EXHAUST.

Sir,—With regard to the letter written by "Solder" about tuning a Levis, I was much interested to notice that he states that a straight through exhaust slows a machine. He has evidently found this to be so in practice, as he stresses this point by putting it in italics. It would be very interesting to know what is the reason for this, and also whether it applies to all machines or only to two-strokes.

I would suggest the following: The exhaust charges in a two-stroke follow each other with such rapidity that there probably occurs a piling up or cushioning in the exhaust pipe which causes back pressure and negatives any vacuum which might occur further up the pipe.

A silencer would prevent this, for once the charges have expanded they will not regain their elasticity, and can exhaust into the air at a comparatively low pressure.

"FLUX."

IMPROVISED VULCANISATION.

Sir,—Returning late at night from Gloucester, I got a puncture (and also a shock) when I discovered that there was no solution in my kit. I had a Dunlop patch, and eventually it occurred to me (after contemplating riding home on the rim) to try and vulcanise it. I heated the patch over the top of my gas lamp until I could just smell the rubber burning, after which it adhered beautifully, and made a permanent mend. N. CLARK.

A VERY FULL WEEK.

Sir,—Perhaps my week-end mileage, without the use of trains, might interest Mr. Young.

I left Coventry for London Thursday night and completed the London to Edinburgh run at 9 p.m. Saturday night. I then started for Coventry on Sunday morning, 9 a.m., rode all day and night, and arrived at Coventry at 4.30 a.m. Monday.

The machine I rode was my old trials outfit, with a McKechnie spring frame, and I am quite certain that if I had been riding any other machine I would not have felt fresh enough to do the return journey on the following day.

F. H. BECKER.

Sir,—I left Sherborne on Thursday, June 1st, at 5 p.m., and arrived back on Wednesday, June 7th, at 11 p.m., *via* the following route: Sherborne, Claygate, Hendon, Edinburgh; Queensferry, Edinburgh; Dunbar, Edinburgh; Gretna Green, Lake District, Bingley (Yorks), Grantham, Oxford, Devizes, Sherborne. The total distance by speedometer was 1,242 miles, and beyond burning my clutch out on the Summit Hill through my own stupidity, I never opened my tool bags.

The machine was the ordinary 499 c.c. Sunbeam and "No. 3" sidecar, and I carried two 30-amp. 6-volt batteries, windscreen, mudguards, and all the etc.'s required on a trial. E. ARNOLD WRIGHT.

Sir,—With reference to Mr. Young's letter under the above heading, our Mr. F. E. Jones also returned from the I.O.M. Races by the night train on Thursday, arriving on Friday in time to start in the London-Edinburgh run the same evening in which he was successful in securing a "gold." He, however, made the return journey on Sunday by road. JONES' GARAGE, Muswell Hill.

R.A.C. SALUTES.

Sir,—With regard to Mr. A. Martin Cyder's difficulty in finding the R.A.C. patrols, I may say that I find plenty of them, and also every time I have passed one I have always had the salute. Between Coventry and Stratford-on-Avon I have often passed at least three, and each one gave me the salute. Only last week I was directed round a right-angle corner in Kenilworth by one of these patrols, who just saved me from meeting a "Tin Lizzie," while at the same time the salute was given. My only regret, I could not return the salutation. H.P.3704.

Coventry.

Sir,—"Ken Bush" asks the opinion of your readers concerning salutes by R.A.C. patrols.

I also seldom receive an acknowledgment of membership, and know several others who have said the same.

Caterham. GRIEVED.

SAFEGUARDS FOR THE "SECOND-HAND" BUYER.

Sir,—May I impress on readers the importance of using your deposit system when sending money in answer to second-hand advertisements?

A fortnight ago I answered an advertisement for a motor cycle which seemed unreasonably cheap; however, I received a most straightforward-looking letter describing the machine and asking if I could make an appointment, or, if not, perhaps I would send half the purchase money when the vendor would be pleased to put the machine on rail to me and, if satisfied, I could send on the other half.

This seemed quite a fair offer; so off went half the purchase money. But from that day to this I have not heard from the gentleman. But I have heard from the police, who have informed me that he has absconded.

Fortunately for myself, I had the forethought to post-date my cheque, so, except for a few postage stamps, I am no worse off. EX-D.R.

Newton Abbot.

"BREAKFALL."

Sir,—I was very much interested in your article, "How the Crash-helmet Originated," and having experienced the fact that one is less liable to injury when falling off at speed, thought your readers might be interested in the reason for this fact, apart from the beneficial effect of a crash helmet.

As soon as a person falls off a motor cycle he has two velocities:

(1) The velocity of the cycle, less effect of retardation due to wind resistance.

(2) Velocity due to the action of gravity.

No. (1) is horizontal, and No. (2) vertical in direction.

These two velocities can be added geometrically in the form of a triangle known as the triangle of velocities, and the third side will give the resultant velocity, which, if the triangle is drawn to scale, represents this velocity in both magnitude and direction.

A little thought will show that the greater the horizontal velocity (that of the machine) the smaller the angle at which the person strikes the ground becomes.

Now to go on to the subject of "breakfall." The object of "breakfall" is to land so that the force of impact is distributed over as large a portion of the fleshy part of the body as possible, rather than that it should be taken up by one of the bones, such as the collar-bone, etc.

When precipitated at an angle of, say, 5 degrees, the "breakfall" consists of falling flat on the fleshy part of the arms, and then, a fraction of a second later, on the whole of the front of the body. It can be seen that a person uninitiated in the art of "breakfall" will do this automatically, and so, apart from grazing along the ground, not hurt himself very much.

When thrown at an angle of, say, 50 degrees, the "breakfall" consists of dropping the head on the chest, taking the first part of the fall on the hands, and quickly rolling over (heels over head) on to the back, and finally stopping the roll with the soles of the outspread feet. This the uninitiated is unlikely to perform by chance, as he will probably not duck his head, and so land on it. This is where the crash helmet might save one, as the bowler hat does in hunting.

I trust this will not bring a stream of A.M.I.M.E.'s and the whole Japanese nation on my head.

Greenwich. NAUTICAL MATTHEW.

LIGHTWEIGHT TWO-STROKES FOR LONG-DISTANCE TCURING.

Sir,—No wonder some wise fellow said that heroes were born to blush unseen!

Bennett is reported to have pocketed umpteen hundred pounds for winning the T.T. at a beggarly fifty-eight miles per hour, while your correspondent Mr. H. Sutton, on his own statement, covered 256 miles between 9 a.m. and 12.30 p.m.—say about 73 m.p.h.—and no doubt arrived at Bagshot to find that there was not even a decent lunch awaiting him—probably he was not expected so early.

What a pity he stopped to use that oilcan—we might have had some real records. H.N. 1252.

Durbam.

THE NESBIT AWARD

Sir,—How is it that no Nesbit award was given in the T.T. this year? Surely it was merited. What about Mr. S. Wood (Cotton)? To have one's machine and person burnt, brakes no use and a crash, and then to finish fifth, surely this compares favourably with Jones (1921) and "Pa" Applebee (1920)? I have not picked out Mr. Wood because the Cotton is manufactured at Gloucester, but I will pass on to you remarks I have heard on several occasions lately, and that is that Mr. Wood could not possibly be awarded the prize because he is an amateur. I wonder if this is true?

Next year let us have a genuine amateur race, and then we shall not have your exceptionally fine paper spoilt with *ads. to the effect that the Ponk Ponk Co. won the races with a perfectly standard machine.*

Nailsworth A.D. 7590.

DOT AND CARRY ONE TWO-STROKES.

Sir,—With regard to the letter from "Celeritas," I have experienced the surging or periodic misfiring, to which he alludes, with my Clyno two-stroke when making adjustments to the contact breaker of my C.A.V. magneto. I find that if the points are set too far apart the machine, when run, fires exactly as he describes, *i.e.*, fires about half a dozen and misses two or three, and so on. I found this misfiring most irritating, and am very surprised to learn that anyone could mistake it for the normal running of their machine. ERIC S. BOOTH.

Sir,—I have experienced similar trouble with a two-stroke engine. It was cured by giving the contact breaker points a larger opening.

Stroud. SUNBEAM.

Sir,—In reply to "Celeritas," I had on my first machine (1919 single gear Metro-Tyler) the trouble which he has observed. For some time I could not cure it. One day I found—accidentally—that the contact point which is riveted through the spring in the C.A.V. contact breaker was loose. On tightening this up the misfire vanished.

With congratulations on the 1,001st act. A.P. 6912.

Battle.

Sir,—I have experienced the same trouble with my Villiers engine (C.A.V. magneto). Three different plugs were tried, the high tension lead and contact breaker examined, the feed system and carburetter dismantled and cleaned, but no improvement effected.

When the magneto driving chain cover was removed the trouble was obvious. The magneto driving chain had stretched very much, and one side of one link had broken. I had this link repaired and the chain tightened, and this seems to have cured the trouble.

Since this I have noticed that No. 11 of Messrs. Villiers' "Hints and Tips" says: "The magneto chain . . . should be adjusted if it should have stretched, as it is likely to cause the magneto to fire irregularly.

Aldershot. H.O. 1728.

MOTOR CYCLES IN THE SOUTH KENSINGTON MUSEUM.

Sir,—I wish to point out an oversight in Mr. R. A. Ashby's letter: the modern motor cycle is represented (in South Kensington Museum) by a Zenith-Bradshaw with Gradua gear, which is in the same case as the 1916 Rudge-Multi. Regarding engines, the examples are up-to-date, including a Villiers two-stroke with flywheel magneto, and also the four-valve Triumph. W. STEWART.

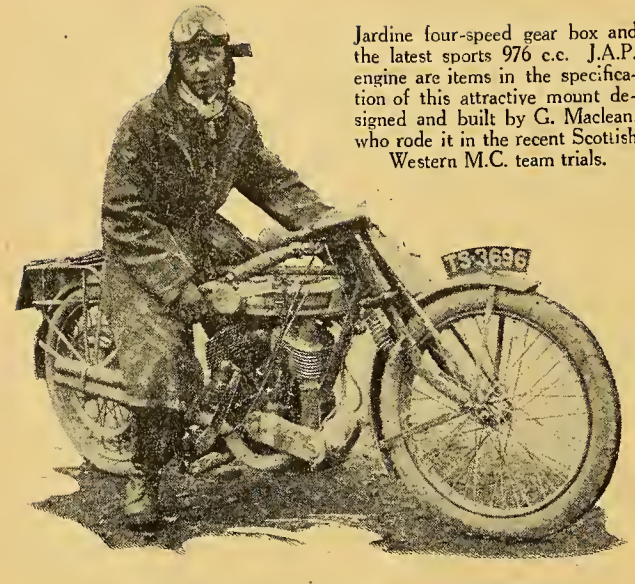
BOYCOTT INCONSIDERATE LORRY OWNERS.

Sir,—While most large trading concerns using road transport are careful at least to instruct their drivers to keep the left side, whether their lorrys are fitted with mirrors or not, it constantly happens that faster moving traffic is held up for miles behind slow moving vans, etc., either through carelessness on the part of the drivers of the latter or through sheer "don't care." This is bad enough on main roads, but now that so many firms distribute by motor to outlying villages on the smaller roads, the holding of the crown of the road is becoming both a nuisance and a danger.

One remedy, where this occurs, is for the owner of the vehicle so held up to make a note of the name of the owner of the offending van or lorry and, if possible, the number and to communicate to headquarters, backing this, where possible, with an assurance that in future the products of this firm will be banned by himself. Most commercial firms are well aware that road discourtesy can do them as much harm as bad service or bad advertising.

I have used the above method three times lately. One firm thanked me for informing them; the second, a brand of motor spirit, laughed at the matter, and consequently that spirit is barred by myself and friends; the third firm were decidedly nasty about it, and their groceries no longer grace my table. Competition is keen, and if such firms cannot see the matter at once, they will shortly find the results tell, if only other road-users would follow on these lines.

Matlock. "MIRROR."



Jardine four-speed gear box and the latest sports 976 c.c. J.A.P. engine are items in the specification of this attractive mount designed and built by G. Maclean, who rode it in the recent Scottish Western M.C. team trials.

BAULKING IN A COLONIAL TRIAL.

Sir,—My attention has been drawn to the following statement which appeared in the report of the "Yorkshire Colonial Trial" in your issue of June 22nd:—"Mrs. Janson stopped and had great difficulty in moving her mount from the course; thus several were baulked."

On reading this I realised that a mistake had somehow been made, and I therefore wrote to the hon. organiser of the trial, whose observers were stationed in considerable numbers along the section where the incident described above is said to have taken place. I quote from his reply:—"I am pleased to assure you that there have been no complaints or protests from other competitors about you baulking them, neither have I had the slightest word from any of the observers that you stopped and were unable to remove your machine from the course. I might also mention that if seven or eight solo riders had been baulked, there is absolutely no doubt that we should have received protests, which latter I am pleased to inform you were conspicuous by their absence."

This letter, the original of which is in my possession, speaks for itself. (Mrs.) G. M. JANSON.

CARBONISATION RECORDS.

Sir,—I am very much interested in the first "chit" of last week's "Current Chat," and am almost inclined to answer it with "indefinitely." I took delivery of a 4 h.p. Triumph in June, 1920, ran it a month on R. "Castrol" (of course, I did use some petrol), and then decarbonized it; it was fairly full.

In July, 1921, I decarbonized this selfsame Triumph again, not because it wanted it, but because my conscience smote me; I'd been reading about harsh treatment by novices, so I removed the cylinder. The interesting points are these:—

I had done over 9,000 miles. The cylinder and piston were both practically clean, what carbon there was seemed dusty and wiped off Fair amount of carbon under the rings; this carbon was more like granite, and took some shifting. There was no appreciable wear anywhere, and not until last month did I have it overhauled, only decarbonizing once since July, 1921, and then I had done another 4,000 miles.

I was, for the six months preceding July, 1921, using a "drain pipe" jet, size unknown, but which choked every other Triumph it was tried in; it only gave me 45-50 m.p.g., but gave me 57 m.p.h. and acceleration like a 9.5 shell. The trouble (you never get satisfaction without it) was heat, and consequently valves—three in ten days was the quickest I could break them without trying to do so. The absence of carbon I put down to the heat of my engine (I'm studying law, so I know you will excuse my ignorance). When the 'bus was at its zenith in "valve busting," I had the good fortune to have a pair of valves given to me, with an offer of replacement of every one I broke. Needless to say, I started in with a view to that replacement. I haven't had it. I've tried, I've nearly broken my heart and neck trying to break that valve, and can't. I used to dream about it, but I've got over that now. The most peculiar point about this exhaust valve is that it contracts when hot and expands on cooling. (I never drink when out riding.)

Anyhow, I was jolly sorry I touched my 'bus in 1921, as it took 4 m.p.h. off her, and I think if I hadn't touched her she would have run just as well right up to her overhaul last month, a matter of 16,000 miles.

Coventry. HP-1677.

WHAT IT COSTS TO TOUR.

Sir,—I shall be obliged to any of your correspondents who will give some idea as to the cost of touring and how they manage to keep it within the limits of the motor cyclist's pocket.

I have done many thousands of miles in one-day stunts, but had not set out on tour until a few weeks ago.

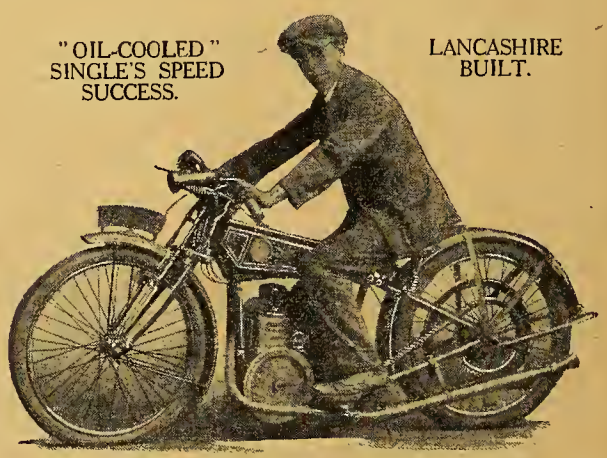
Being a member of the A.A., I put up at their appointed hotels—two-star class when available and three-star when not.

I found the average charges for two persons (my wife and myself) as follows: Dinner, 12s.; bed, 12s.; breakfast, 7s. 6d.; and on top of this one has to be careful to seize the correct moment for getting away or else it requires a pretty good nerve to walk past the hotel servants without being another 2s. down the river. Friends have since told me these charges are quite reasonable, some of them having been rushed as much as 28s. for bed and breakfast only, at quite moderate hotels; but my wife tells me that she could have supplied the breakfast herself at a cost of about 1s. 6d. to 2s. for both of us.

Then there is the midday meal, and perhaps also a drink of tea at, say, 5 o'clock. With petrol, oil, and fair wear and tear of the machine, £3 per day will not foot the bill. This does not allow for the small incidental expenses usually associated with holiday times.

After the first two or three days we hit on the idea, with a view to economy, of booking the accommodation by telephone, and arriving too late for dinner; and unless some good Samaritan comes forward with other ideas I am afraid that for the next tour I plan my 'bus will be left at home and I shall go by charabanc. A. S. KING.

Bradford.



A prize winner at recent Southport speed trials, J. Houlding, on his Matador, which is fitted with a 350 c.c. Bradshaw "oil-cooled" single cylinder o.h.v. engine.

CASTOR AND MINERAL OILS.

Sir,—Referring to the article by "Kemist," I may say that I have used Castrol "R" for some years, both with a single cylinder motor cycle engine and a four-cylinder water-cooled car engine. I have found the advantages of using Castrol "R" to be :—

(1) Engine requires decarbonisation much less frequently than when a mineral oil is used.

(2) Carbon on cylinder heads and piston was soft and far more easily removed; there was very little carbonisation even after several thousands of miles running with "R."

(3) Oil in base chamber was still "viscous" and good as a lubricant after over 1,000 miles with "R," while after 500 miles with a mineral oil all lubricating value had departed and oil had to be renewed.

(4) Engine kept much cooler when "R" was used.

(5) Greater speed power and smooth running was experienced with "R" than with any other oil.

(6) In winter "R" never clogged oil pipes, but always flowed freely.

(7) I should imagine less likelihood of harm would result by petrol priming for easy starting when "R" is used, it being less soluble in petrol and not likely to be entirely washed from cylinder walls and pistons by priming than in the case of a mineral oil.

(8) "R" is far cleaner in use than any other mineral oil.

(9) I have *never* found any damage to pistons, cylinders or bearings by using "R." Pistons and cylinders had a perfect glass-like surface. I rather think the writer of the article has confused "thick" oil with "viscous" oil. An oil may be very thick and yet a poor lubricant and have very little "viscous" or "oily" value.

As regards the T.T. entrants using castor oil (does the writer imply Castrol?), surely they would not do this simply because they like the smell or because it smells "racy." They have too much to lose by using any but most suitable oil. I have followed motor racing for many years, and have attended most of the big motor race meetings, and I think few oils other than Castrol "R" are ever thought of for speed. Personally I have found it best for touring also. I have no interest or connection with the manufacture of "Castrol" or any other oil, but write merely as a very satisfied user. G. O. F.

Windsor.

UNSATISFACTORY VALVE REPLACEMENTS.

Sir,—May I issue a warning to my brother motor cyclists, especially novices like myself?

"Obtain your spare valves direct from the makers of your engine."

"When your valves require facing, send them to the makers."

I ride a B.S.A. 1921 model, and on the advice of a garage mechanic I purchased a valve from him, which, although not a genuine B.S.A., he assured me was a perfect fit. He also faced up the genuine B.S.A. valve in his lathe. The engine slowly but surely lost compression, and my petrol consumption was enormous.

After numerous mechanics had tried in vain to improve matters, I wrote the makers, and they reported that the valve had caused all the mischief. They also examined the genuine B.S.A. valve which had been faced and found that it had been faced at a wrong angle. Both these valves had damaged the seating. XH 3296.

Essex.

SHAFT DRIVE'S UNPOPULARITY.

Sir,—I am disappointed to find that no one has come forward to refute the fact that the shaft-driven bicycle, which I referred to by way of a good illustration, died a natural death because it was not able to compete with the chain-driven machine in efficiency. An old Coventry racing cyclist, with whom I discussed the matter, tells me that there is not, to his knowledge, a single record established on the racing track by the shaft-driven bicycle. The inference is obvious, and no amount of figures gleaned from text-books can disprove it. In practice, text-book figures are apt to be misleading. One thing I must mention, and that is, practically all the heaviest commercial vehicles use chain drive to-day. Also the steam waggons of the latest types all seem to be chain-driven.

The case of the motor car is different altogether. Here some efficiency is sacrificed in order to obtain an admittedly better mechanical construction for the purpose in view, and having particular regard to silence.

I have not hurried to reply to the various letters on the subject, because I have been watching very carefully some practical experiments which are being carried out on the road (very different from laboratory conditions), on two identical cycle-cars, one fitted with shaft drive and live axle, and one with all-chain drive. The results, so far, from a point of view of efficiency at the road wheels, are well in favour of the chain drive, which, however, loses a little from the standpoint of silent running. As a matter of fact, the results point to a combination of the two, shaft from engine and final chain being adopted on the production model.

I am not, at the moment, permitted to make the results of these tests public, but if any reader cares to write to me I shall be happy to give some technical details. At the same time, one must keep an open mind on these subjects, and if a shaft-driven motor cycle can prove itself on the track equal to, or better than, a chain-driven one, I am sure there will be no lack of designers or manufacturers ready to consider it. As a high-class engineering job, I am quite ready to agree that such machines as the shaft-driven "F.N." are in a class to themselves, and are most worthy examples of modern motor-cycle engineering.

Coventry. WILLIAM A. WEAVER.

[This correspondence is now closed.—Ed.]

UNFAIR TO THE LATE STARTERS.

Sir,—On looking back on the recent T.T. races I feel compelled to point out in your columns an injustice that there is in the A.C.U. rules. I am amazed that the following point has not been raised before: First, it must be admitted that it is no mean feat to get a machine to complete the course at all. I wish to point out that the rules do not give all competitors an equal chance of doing so. While

Parallel link motion has been applied to rear springing by Mr. T. H. Webster, of 172, Ladykirk Road, Newcastle-on-Tyne. An experimental frame is shown which has given the designer satisfaction, but an improved lay-out, with the saddle tube vertical and the gear box close to the engine, has been evolved.

some riders start as much as half an hour after the first man the course is closed for *all* at the same time. Thus a man starting third has half an hour longer to complete his six laps in, and finish, than a man who starts 63rd.

This hit the Rudges very hard, as their riders mostly started late and had not time to finish in.

I am also of the opinion that a rule should be made that all machines must be run on motor spirit as sold to the public and not doped with ether, metho, etc. I do not think that running on these very expensive concoctions can be said to assist in improving the touring machine. W. B. TOBEY.

TEMPERAMENTAL ENGINES.

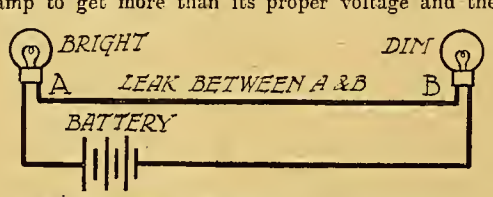
Sir,—I am quite convinced that the erratic running described by readers is due to an upsetting of the air stream round the carburetter. I have noticed this on my own Rudge.

Whenever I lift my right foot from the rear foot-rests in order to give a charge of oil, or if I move my right knee outwards, the speed immediately drops five to ten miles per hour. Immediately I regain the normal riding position—*i.e.*, both feet on rear foot-rests, knees against tank grips—the speed increases to the same extent. The cycle is *not* canted over to one side during the movements described, so upsetting the level, nor is there the slightest defect in its mechanism. The slowing up is not nearly so pronounced when one is riding minus coat, although it is still existent to some extent. E. O. GURNEY.

Taplow.

"IXION'S" SERIES WIRING PUZZLE.

Sir,—The fault is probably due to a partial leak or earth between the side and tail lamps. This would cause the side lamp to get more than its proper voltage and the tail



Both "Engineer's" and Mr. O. Glydon's letters are made clear by this sketch.

lamp will burn dim, due to voltage drop across battery and leads. The leak may be either between two adjacent wires, or, if the frame or chassis is used as a return, between one wire and the chassis. "ENGINEER."

Dublin.

Sir,—In a recent issue "Ixion" propounded a rather interesting little problem appertaining to the wiring of side and tail lamps in series.

From the details given I am inclined to hazard the following two deductions:—

(1) Both lamps are probably fitted with miniature screw bulbs—that is to say, the type commonly known as "pocket lamp bulbs."

(2) The owner of the outfit in question has probably been obtaining his bulbs from a local garage or electrical dealer who does not stock this type of bulb made by a well-known and reputable manufacturer.

Now, in burning lamps in series it is not only necessary that the voltage of each lamp be equal—*e.g.*, two four-volt bulbs on an eight-volt circuit—but it is also important that the lamps should be of equal amperage or candle-power.

If you take two four-volt lamps, one of four watts consuming therefore one ampere of current and the other of two watts consuming only half an ampere, and put these in series on an eight-volt circuit, the combination, as can easily be deduced from Ohm's Law $C=\frac{}{R}$ will pass two-thirds of an ampere. Under these circumstances the four-watt lamp will burn dimly, as it is not getting sufficient current, while the two-watt lamp will be exceedingly bright, as it is being overloaded; it is equivalent, indeed, to burning it direct on a circuit of 5.3 volts.

These figures have perhaps been exaggerated somewhat for the sake of clearness, but the fact remains that many miniature screw bulbs, sold mainly as replacements for pocket lamps and torches, do vary very considerably in their current consumption, and this, I think, may be the cause of the trouble.

I should certainly advise experimenting with two new bulbs stamped with a well-known name *and of similar candle-power*.

I am aware that this explanation does not cover the fact that the same bulb glows alternately bright and dull according to which lamp it is placed in. A. R. TURNER.

Birmingham.

Sir,—A slight short between "A" and "B" will produce the "wiring in series" trouble commented upon by "Ixion." OLIVER GLYDON.

Handsworth.

"SKIDS" IN THE 200 MILE SIDECAR RACES.

Sir,—With reference to your editorial comments, I am afraid that a large number of your readers will not agree that this safeguard was a "little over-anxiously conceived."

It must be borne in mind that this was a race of considerable length, and that there are risks other than the actual breaking of the axle to be considered with an "open-sided wheel."

The danger of shedding a wheel, or wheel collapse, is, of course, not great, but, *should* it happen, the risk of injury is not confined to the rider of the disabled machine, and the results could be ghastly; as all the machines were so fitted none were handicapped.

Your comment that "stub axles of cars very, very seldom come adrift" is, of course, true, but they *do* come adrift or break, as witness a certain car at Brooklands on the day of the sidecar races.

This car was being driven away from the fork after the race and had only travelled a few yards when the near-side stub axle broke like a carrot.

It was also my experience recently to pass a car on the road near Lewes that had had the near-side stub axle come adrift whilst at speed, and a more terrible mass of wreckage and twisted mechanism I have never witnessed.

I was assistant to a certain competitor on the day of the race, and from what I could gather the skid was looked upon favourably.

I drive a car daily, always maintaining a high average speed, but I confess frankly the stability of my front axles is always pregnant in my mind. I have had good luck so far after many years' car driving, but I have lost count long ago of sidecar-wheel breakages.

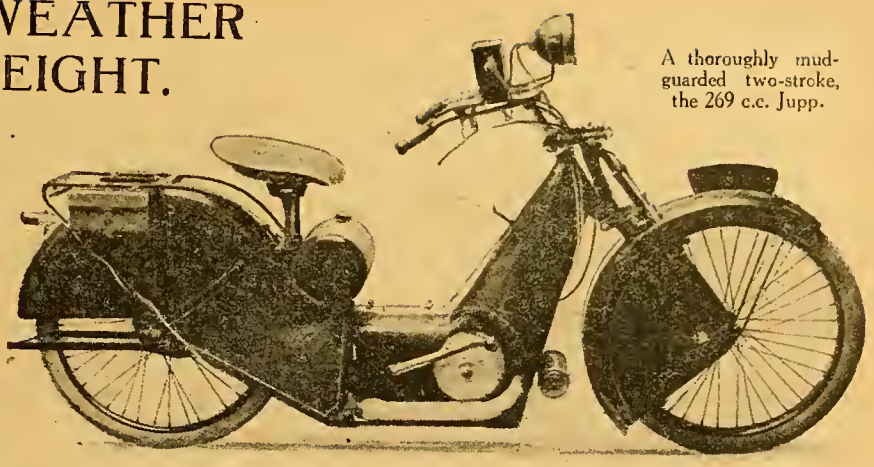
AN ALL-WEATHER LIGHTWEIGHT.

Duplex Open Frame and Completely Enclosed Mechanism on the Jupp Lightweight.



A thoroughly mudguarded two-stroke, the 269 c.c. Jupp.

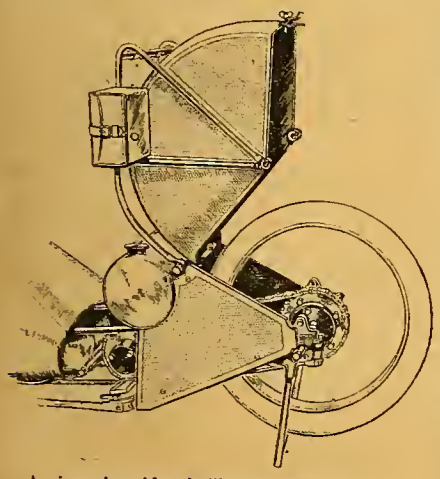
A DESIGN which should satisfy the demand for an all-weather machine has recently been introduced by the Jupp Motor Co., Ltd., 86, Leadenhall Street, London, E.C.3, Mr. W. J. Barker, A.M.I.A.E., 194, Balham High Road, London, S.W.12, being responsible for the design.

The Jupp, in its present form, is an attractive little machine, and should command the keen attention of the ladies. Since the Villiers flywheel magneto engine, having a bore and stroke of 70 × 70 mm. (269 c.c.), and the all-chain transmission are completely encased in easily detachable shields, the Jupp lightweight claims immunity from oil-slinging, whilst there is no doubt that the definite angular outline adds considerably to its appearance. In consideration of the fact that the total weight is only 170 lb., a very sturdy duplex open frame suspends the engine unit. It is composed of straight tubular members throughout, whilst the engine is slung from cross members spanning the upper and lower tubes.

A two-speed Sturmey-Archer gear box is neatly housed at the rear of the inclined engine, and adjustment to the primary chain is made by the usual arrangement of bolts on top of the box. This latter is suspended from the upper tubes by two angle plates.

A large circular tank capable of holding 2 gallons of petrol is fixed below the saddle, which is mounted on two pillars which seat on coil springs contained in a pair of vertical tubes brazed to the frame. To facilitate repairs to the back tyre, the rear mudguard is hinged, and since it is extended by large valances to the wheel centre, adjustment of the chain would also be difficult were it not that the whole component, including the toolbags and the carrier, can be raised. The saddle, of course, is pulled out beforehand. The usual adjustment of the driving chain is provided, whilst incorporated in the rear sprocket is an internal expanding brake, operated from a heel pedal on the near side.

Brampton spring forks are fitted, whilst an electric head and tail lamp, supplied from the flywheel generator, are included. An auxiliary dry battery provides illumination when stationary.



An ingenious idea facilitating repairs to tyre or chain.

Easily Controlled.

So far as the riding position is concerned, the location of the gear change lever, midway between the handle-bars and the base of the upper frame tubes is very handy, whilst a lever starter, operating on the starter spindle of the gear box, is conveniently placed for the right hand. A large, heavily valanced front mudguard should adequately protect the rider from front wheel splash. The price of this machine is £68.

THE BELGIAN GRAND PRIX.

AFTER the French Grand Prix comes the Belgian, a thoroughly sporting little affair on July 23rd, over a charming course in the neighbourhood of Spa. This course is the same as last year. It is triangular in shape and runs from Francorchamps to Malmédy and Stavellot.

So far as Great Britain is concerned, this country will be well represented: there are five Norton entries, one of which will be ridden by Hollowell, a Sunbeam to be ridden by Jackson, a Zenith-Bradshaw to be ridden by a Belgian, and three Triumphs, one, it is reported, to be ridden by Edmond. We are given to understand that the Belgian firm of Rush, which fits a J.A.P. engine, has entered a machine which will be ridden by Le Vack. Other English entries expected are those of O.K., Velocette and Sun. For the first time the F.N. will appear in the race, three of these popular machines being entered in the 350 c.c. class.

A great deal of work is being done on the roads; corners are being eased off, bridges are being widened, and the surface, we are assured, will be smooth as a billiard table.

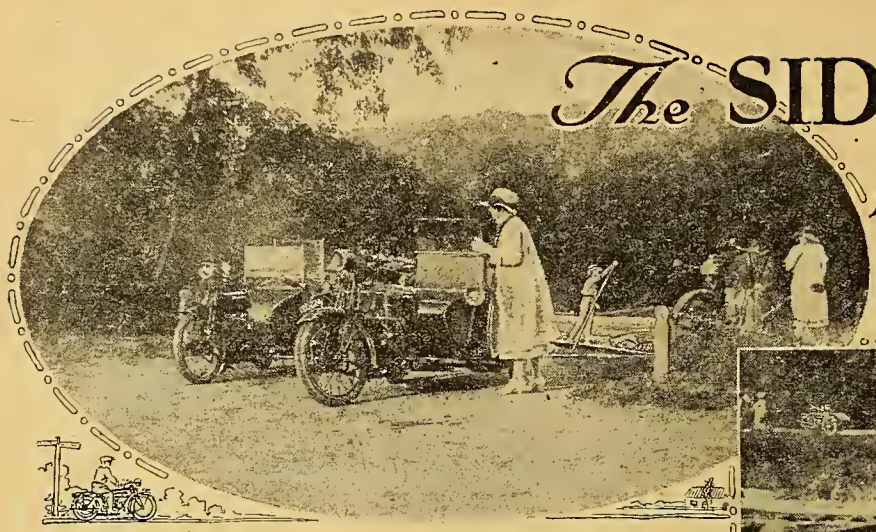
REGISTRATION NUMBER DIMENSIONS.

ACCORDING to the London daily papers, the Stratford magistrates towards the end of last month fined a motor cyclist 5s. for using too small figures on his number-plate. A policeman said that the figures should be 3½ inches high.

Lest this case should cause our readers endless worry we reproduce the correct minimum dimensions for motor cycle registration numbers, which, it will be noted, are just half what the policeman stated. This, of course, is not pure coincidence, for the sizes of motor car—and, incidentally, three-wheelers and sidecar outfits weighing more than 3 cwt. unladen—should be double the motor cycle figures.

Study of this sketch will reveal the minimum sizes and spacings of the registration figures allowable on motor cycle number plates.

The SIDECAR and the PUNT



Near Boulter's Lock, Maidenhead.

A pretty scene on the Thames near Marlow.

A Soliloquy, Written by the Cool Waters of the Thames after a Dusty Ride across the Chilterns.

BOULTER'S LOCK, 7 p.m.—A pageant of colour and pose. Like a dozen or more sidecarists, I am sitting on the banks of that narrow little stretch of water leading from the lock. After dropping down from the heights of the Chilterns into the Thames valley, we have been caught by the glamour and riot of colour passing along the cool green waterway. My fellow sidecarists, too, have been lured from the road in the same way, for each outfit has tarried independently. Here are men propelling punts with an air of studied negligence, but monstrously unsuccessful in their efforts to appear unconscious of the crowd's critical gaze. One tall, perspiring punter has allowed water to drip from his pole on the cushions and hat of a damsel reclining on blazing crimson and gamboge cushions.

Contrast.

This has resulted in a disturbance of a pose that must have taken hours of careful thought and preparation—careless monster to make a *faux pas* at this most important part of the play with an audience so near and so critical. What a contrast are these passengers to our own; there is no denying the cool luxury of reclining on huge cushions clad in the flimsiest of dresses—of being propelled silently, without an atom of vibration, in the shadows of willows and poplars. And the sidecarists—they are dusty, their filmy dresses are at home, they repose on leather, they know what vibration means, and "potholey" roads too. Their way is not by still water, and drooping willows. But after all there cannot be a real comparison, for, as attractive as the river is on a flaming day in July, the highways and byways of Great Britain offer infinitely more than a circumscribed stretch of water can ever do.

Not long ago we were lunching on the very topmost heights of the Chilterns, a lovely spot reached by branching off the main Aylesbury-Tring road near Aston Clinton on to the road that winds across the Chilterns past the water-works on to Cholesbury and Hawridge. It is a beautiful route along a road that eventually develops into a steep gorge running through a fairy wood as lovely as *Via Gellia* in Derbyshire. When the roof is reached—809 ft.—the country lies spread around much like the panorama from the Malvern Hills.

Seventy Attractive Miles.

The circular run we are making has been through amazingly exquisite country, as diverse as can be found anywhere in England—well, hardly that, for the sea was not embraced; but, considering the nearness of London, really wonderful. There must be thousands of Metropolitan and Home County sidecarists who are occasionally at a loss for a week-end "touring" route, and the following run, mapped practically as we went along, may fill a gap when a jaunt of seventy or so miles is desired.

One can start at 11 o'clock, taking the Edgware road as far as Elstree, or branching off before Elstree and including Stanmore on the way to Bushey and Watford. (A good road, excellent from Elstree.) From Watford through picturesque country to Berkhampstead, then branch to the left for Chesham. (A suitable spot for a picnic luncheon may be found on the pretty common on the right.) On reaching the bottom of the hill into Chesham, turn abruptly to the right (missing Chesham), then through Chesham Vale on to Cholesbury and past Tring water-works, and "little Derbyshire" (800 ft.), on to the Tring and Aylesbury road. Leave the main road again immediately for Wendover, Amersham, High Wycombe

£100 complete

"DUNELT" Model B

FRAME. Specially designed strong section loop frame, with heavily reinforced lugs, practically unbreakable. Long wheel base ensures great comfort to the rider.

FRONT FORK. An exclusive feature. Laminated spring, designed specially for the "Dunelt," effectively absorbs all road shocks.

WHEELS. These are not interchangeable, but very easily detachable with knockout Spindles, a great advantage for cleaning and tyre changing purposes.

GEAR. Sturmy Archer three-speed and clutch.

BRAKES. Specially designed front and rear brakes operating on belt rim. Powerful and dependable.

MUDGUARDS. 6 in. wide domed, giving ample protection in all weathers.

SIDECAR. Specially designed, roomy and comfortable, with spacious locker at rear, complete with apron.

The price £100 complete

places the "DUNELT" in an unassailable position—it stands alone for VALUE and is the finest combination proposition that the motorcycle industry can offer. This is made possible by reason of the careful design of the machine from a production standpoint and large output—our position as manufacturers of special steels also enables us to obtain our supplies of material at minimum prices.

Comparison will prove to you that the "DUNELT" is quite exceptional in quality and value—its unbroken record of success in every trial entered is convincing proof of its ability—and a demonstration and trial run will convince you that for all round excellence and service there is nothing to equal it.

The Sidecar and Punt.—

—hilly, attractive going—Great Marlow, Cookham, Taplow, Maidenhead, Windsor, Runnimede, Staines, and London.

This run embraces the best of the Chilterns and the finest reaches of the Thames. The roads, too, are good on the whole.

* * * * *

No! after all it is not a question of whether boating is superior to sidecaring: it is a matter of taste—or finance, for one cannot hire an outfit so easily as a punt. As attractive as the river is, I would rather have crossed the Chilterns and wandered along the luxurious Thames valley as we have just done, than have eaten lotus beneath a cascade of grey willow whilst reposing lazily in a punt.

* * * * *

Three Hours Later.

It is growing dusk, and a couple of sidecars still remain at the water's edge; it is, however, light enough to scribble. We have just returned a hired punt to the boat-house. It came about this way.

Self (still in dusty riding rig): "I expect every leaky old punt is in commission to-day."

Passenger: "'Spect so! The leakier the better, I should say." (Takes off coat and wrap.)

Self (rather surprised at the white dress beneath passenger's coat, also notices she wears white shoes): "Jove! You're just right for the river."

Passenger (jumping to conclusions): "Well, it's only dust on *your* boots, and you wear a white shirt and your trousers are flannel."

Self: "I wonder if it would be safe to leave the sidecar? And what about your pose? You've had no practice at posing."

(Passenger here strikes a self-conscious attitude and adopts an admirable and very self-conscious smile.)

Self: "Splendid! But what about *my* pose?"

Passenger: "That's all right, dear; it will come naturally to you."

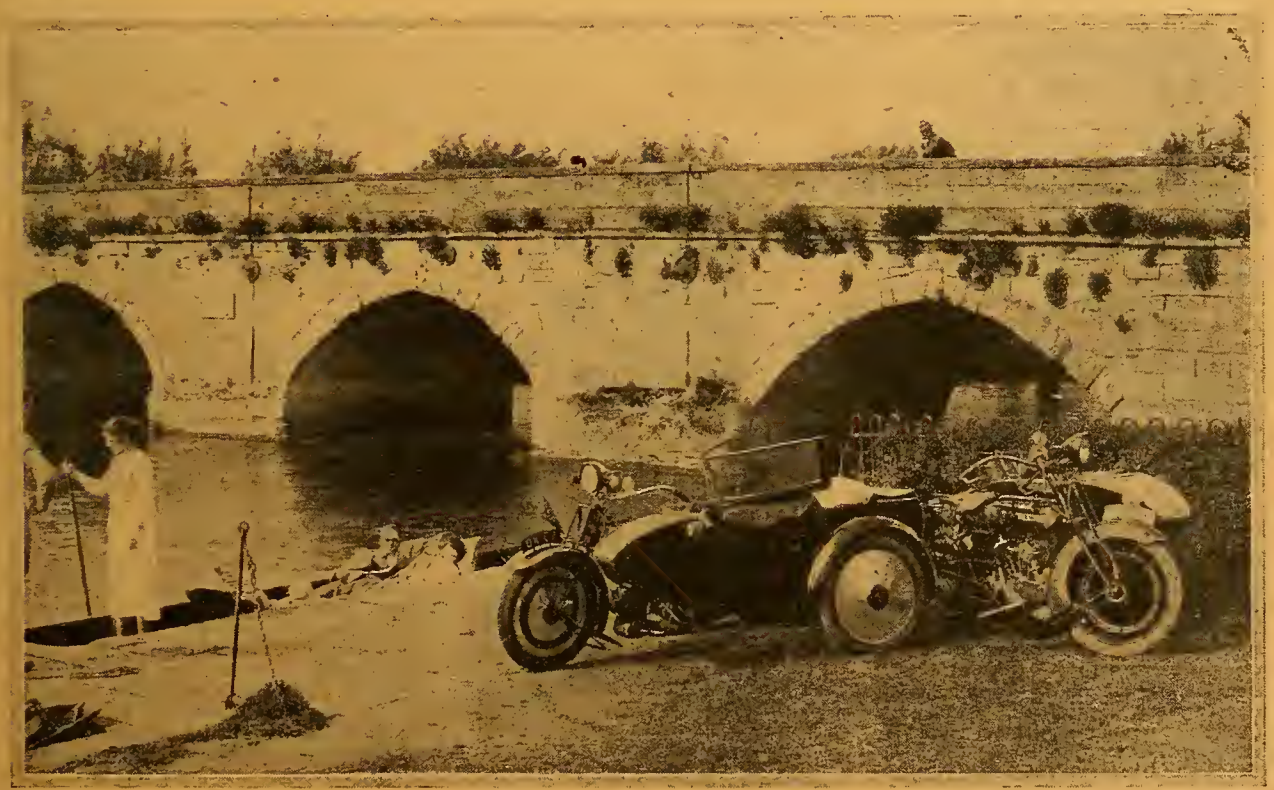
(She turns and walks hurriedly towards the boat-house! Self stands foolishly for a second or two, swallowing the compliment, then grunts and follows.)

* * * * *

The sidecar for me every time, it's very, very hot punting, and the gnats are a perfect pest when you sit under the willows. I look forward to the twenty-mile run home, yet I guess when my passenger talks to her friends of to-day's outing she will say: "We had such a lovely time punting on the Thames." But ask her to-morrow whether she would rather punt on the Thames for a fortnight, or sidecar through North Wales and the Lake District!

One cannot deny the romance of the river, for as I finish writing, a canoe glides by like a long grey shadow in the violet of the night, and as swiftly and silently as a black bat's flight. Murmurs faint and rippling waters . . . and so on to the accompaniment of muted harps and Eastern drums. But there's not much of a black bat's flight about a "hot stuff" Norton sidecar, say, on the Great North Road at midnight. No! there's not much romance about sidecaring as seen by the observer, although romance and the sidecar are sometimes very closely associated.

FRIAR JOHN.



At Stratford-on-Avon one is able to park the sidecar quite near to the water's edge whilst spending an hour or two on the delightful and historic Avon. B.S.A. sidecars are seen in the foreground.

Why Wheels Wobble.

A highly interesting review of the "wheel wobble" controversy which has been discussed in the correspondence pages of *The Autocar* was included in last week's issue of our sister journal.

A Dangerous Stretch.

A stretch of road between Egham and Sunningdale, on either side of the Wheatsheaf Hotel at Virginia Water, is reported to be extremely dangerous in wet weather, by reason of its glassy surface being a great provocative of skids.

Southsea Speed Trials Postponed.

The date originally fixed for holding the speed trials during the Southsea Carnival, August 17th, unfortunately coincided with the 200 mile race of the Junior Car Club at Brooklands. For this reason the trials have been postponed until Saturday, August 19th, when four out of some fifteen races will be set aside entirely for motor cycle entrants.

Demonstration at Bootle.

A big motor carnival and demonstration has been arranged to take place at Bootle on the 29th inst., commencing at 2.30 p.m., when the proceeds will be devoted to the Bootle Borough Hospital and other voluntary institutions at present in need of funds. A generous prize list will be provided, and the programme caters for all classes of motorists. Entry forms and full particulars of this event may be obtained from Mr. H. J. McFall, 88, Gloucester Road, Bootle.

D.R.'s Reunion.

The fourth annual rally of ex-Dispatch Riders formerly attached to the 24th Division was held recently at Lakeside, Windermere. In spite of the fact that the party only numbered seven this year, both the reunion and the dinner which followed were very much appreciated. Next year the rally is arranged to take place at Buxton, and all ex Don R's of the 24th Division who have not received notice of this annual affair are invited to communicate with the Secretary at Parksend, Swinton, Manchester, when full information will be forwarded to them.

A Stratford-on-Avon Gymkhana.

A procession of decorated motor vehicles will be a feature of Carnival Day at Stratford-on-Avon on July 29th, and the programme will also include a gymkhana, to be held in a public field opposite the Memorial Theatre. The hon. secretary is Mr. S. G. Foley, The Hospital, Stratford-on-Avon.

Progress.

The A.A. is enrolling new members at the rate of 1,000 per week, the total membership now exceeding 154,000. The income for the past year was £220,000, as against a budget estimate of £190,000. These figures indicate steady progress of the Automobile Association, and were referred to at length by Sir William Joynson-Hicks, the chairman of the A.A. and M.U., at the annual general meeting held on Monday of last week.

HOLDER OF THE CHAMPIONSHIP OF GERMANY. W. Rossig, who gained his title against riders on machines representative of many countries, on the 494 c.c. Douglas which he rode.

Special Features.

SIDECAR AND PUNT.
LADIES IN COLONIAL TYPE TRIALS.
MID-YEAR MODELS.
ACTIVITY OF THE CLUBS.

Blackpool Race Track.

A special committee has been appointed by the Blackpool General Purposes Committee to report on a proposal for the construction of a motor racing track in the new park projected for Blackpool. The suggestion for the construction of the track is said to be supported by forty motoring organisations, discussion of the project having first been instituted by the Blackpool and Fylde Motor Club.

Noisy Exhausts at Brooklands.

A notice issued by the Clerk of the Course at Brooklands, Colonel F. Lindsay Lloyd, is to the effect that motor vehicles, particularly motor cycles and others fitted with motor cycle engines, have become too noisy. In the future, therefore, no motor vehicle which makes a noise likely to cause annoyance to residents in the neighbourhood will be permitted to enter the track grounds.

A Royal Motor Cyclist.

Considerable satisfaction is being felt that the choice of H.M. the King of Belgium in purchasing a new motor cycle should have again fallen on a British-made machine. After an extensive personal trial in competition with other makes, His Majesty eventually selected a Coventry Victor as most nearly meeting his requirements. The engine and all important parts of the machine are being made at the Coventry works of the company thus honoured, the assembling being carried out at Brussels.

Closed to Motor Traffic.

It is announced by the Ministry of Transport that, following an investigation into all the circumstances of the case, an order has now been issued prohibiting motor cars from using the Old Wyche Road in Malvern from Westminster Road to the Wyche main road.

By the same order, the use of heavy motor cars is prohibited on Bransford Bridge over the River Teme on the Hereford-Worcester main road, over Holt Fleet Bridge crossing the River Severn on the Droitwich-Ombersley-Holt-Witley main road, and on New Mill Bridge over the River Teme at Shelsley Beauchamp.

Yesterday's Big Continental Race.

Yesterday the Grand Prix, France's premier motor cycle event, was held at Strasbourg; and, although at the time of going to press the result was not known, a British victory in the 500 c.c. class seemed highly probable. A full illustrated report of the event will appear in next week's issue of *The Motor Cycle*.

Harmful to the Movement.

The Duke of Leinster's motoring escapade—London to Aberdeen in 14½ hours—so prominently reported in the daily press, has called forth a letter of condemnation, widely circulated, from Mr. T. W. Loughborough, the secretary of the A.C.U. We agree unreservedly with Mr. Loughborough's comment that such a happening "merely does harm to the movement."

Wanted—A Speedway.

The North London M.C.C. is anxious to organise some speed trials, but a difficulty in securing a suitable stretch of road is experienced. The length of the course required is one kilometre (five furlongs), with sufficient room for a good start and finish. Any suggestions from readers would be welcomed by the hon. secretary of the club, Mr. Alan W. Day, "Claremont," Ballards Lane, Finchley, N. 3.

The Great Silencer Muddle.

At Richmond Police Court, Norman K. Pallent, of St. George's Road, St. Margarets, was summoned for not having a proper silencer on his motor cycle. He denied the offence, and said that the silencer was effective, and that the noise was due to the atmospheric conditions and a wall on one side of the way. Defendant also said that he had taken the machine to the Richmond police, and on their advice had had the silencer altered, and he complained that there was no unity in these matters. Machines which passed in one place would be stopped in another district. He was fined 40s. however.

A familiar view of the famous Bwlch-y-groes: J. W. Meredith (1098 c.c. T.B.) making a good ascent in the 24-hour M.C. and A.C. trial on Saturday last. This hill will very probably figure in the forthcoming A.C.U. Six Days Trials.

The Week-End Gale.

Competitors in the Bristol v. Bath Team Trial had to avoid branches of trees, blown off by the 100 h.p. gale which swept the West on Saturday last; at one point a large branch had fallen across a motor bus, and the road was nearly blocked.

126 ENTRIES FOR THE SIX DAYS TRIALS.

NO sign of waning support for the A.C.U. Six Days Trials is evidenced by the entry list, which shows that 123 machines are booked to demonstrate their merits between August 21st and 26th.

Cross-Country Route.

The route will be in the nature of a strenuous tour, involving some really serious hill work in Yorkshire, Wales and Gloucestershire, with a final speed test on Brooklands.

Below are the machines entered; where riders are already selected the names are given in parentheses:

CLASS A (250 c.c.).—New Imperial (B. Kershaw, L. Horton, and J. Wilkins), J.E.S. (R. P. Purnell), Coventry-Eagle (P. L. Mayo), Levis (three), Radco (G. Lovegrove), Sun-Vitesse (three).

CLASS B (350 c.c.).—A.J.S. (E. W. Cholderoft,° H. F. Harris, Mrs. O. M. Knowles,° and another), Raleigh (H. Gibson, W. H. Hadfield, C. F. Nott), Alloa (R. Cooper, L. E. Clulee, W. Johnson), O.K. Junior (A. E. Salway, N. Hall, W. Handley), Francis-Barnett (E. A. Barnett, S. M. Greening), Sheffield-Henderson (E. Searle), Connaught (I. F. Anderson, C. L. Sproson, A. G. Wall), Ner-a-Car (Mrs. Janson), Royal Ruby (C. J. Dodson, P. M. Hills), James (G. Kimberley, J. Lidstone), Beardmore-Precision (H. Greaves).

CLASS C (500 c.c.).—Rudge (W. L. Gard, F. S. Whitfield), Norton (R. M. Knowles*), Douglas (J. L. Hannan,* R. C. Winn,* J. A. Newman*), Sunbeam (G. Dance, A. Bennett, C. Greenwood, H. Beedon*), Martinsyde (A. A. Symes), Dunelt (two), Wilkin (W. H. Hardman*), Lea-Francis (R. P. Ransom, A. Lea), Triumph (W. N. Phillips*).

CLASS D (750 c.c.).—Scott (three), Powell (J. Westwood Wills), Coventry-Victor (G. E. Austin°), Martinsyde (A. G. Fennl, Indian (D. H. Davidson,* W. G Catterall*), McKechnie (F. W. Becker), Beardmore-Precision (S. M. Lewis), F.N. (T. Buckle), P. and M. (J. A. Leyland°).

CLASS E (1,000 c.c.).—Rudge (E. J. Kehoe), Brough-Superior (G. Brough°), Zenith (R. C. Charlesworth,° and two others), Harley-Davidson (W. D. Pugh°).

CLASS B/S (350 c.c. SIDECARS).—Connaught (L. P. Brettell).

CLASS F (600 c.c. SIDECARS).—New Hudson (B. Bourke and two others,) Rudge (A. W. Hadley,* W. L. Danskin, F. T. Sibley), Sunbeam (T. C. de la Hay, P. W. Bischoff, R. Brown), P. and M. (P. Cunningham, R. Lewis, G. M. Townsend), Dunelt (one), Beardmore-Precision (E. R. Jacobs).

CLASS G (1,000 c.c. SIDECARS).—Matchless (W. Bucknell,° E. C. Barton,° F. J. Ellis,° T. J. Ross, F. O'Brien), A.J.S. (O. Wade, H. Poole, F. W. Giles), Martinsyde (H. H. Nicholson, W. H. Bashall, J. T. Bashall), Excelsior (V. F. Long°), Chater-Lea (one), Indian (E. A. Bridgman,* R. Sivanton°), B.S.A. (H. S. Perrey, B. L. Bird, J. H. Walker), Bradbury (G. E. Minett,° P. Platt,* W. E. Grange), Harley-Davidson (G. Baxter, T. R. Allchin, C. W. Johnston), James (F. Cotton), Raleigh (E. S. Burnett*), Zenith (R. H. Bywaters), Ariel (one).

CLASS J 2 (750 c.c. CYCLE CARS).—Scott-Sociable (D. W. Rhodes), Metro-Tyler (A. McL. Powell*).

CLASS H 2 (1,100 c.c CYCLE CARS).—Morgan (S. Hall,* and two others), L.S.D. (G. W. Shepherd), T.B. (F. S. Spouse).

MACHINES UNSTATED.—(M. C. Breese, E. Cross, W. A. Fell Smith, Dickenson and Adams, Ltd.).

° Entered by rider.

COLWYN BAY SPEED TRIALS.

STANDING start kilometre speed trials were held by the Liverpool M.C. on Colwyn Bay Promenade on Saturday last, R. T. Cawthorne (490 Norton) making fastest time of the day.

There were 60 individual entries in the motor cycle classes alone, the following list of trophy winners giving a good idea of how the honours were distributed:—

Reliance 50-guinea Challenge Cup (for the fastest time by any rider): R. Cawthorne (490 Norton), 35 secs.

Baxter Memorial Cup (perpetual), for the fastest time by a private owner member of the Liverpool Club residing within 20 miles of Liverpool: G. S. Boston (349 A.J.S.).

Coopland Cup, for fastest time by amateur member (expert barred) of Liverpool Club: G. F. Burns (482 Sunbeam).

Cup, for fastest time with sidecar: V. E. Horsman (633 Norton sc.).

Cup, for fastest time with sidecar (amateur): S Ollerhead (494 Douglas).

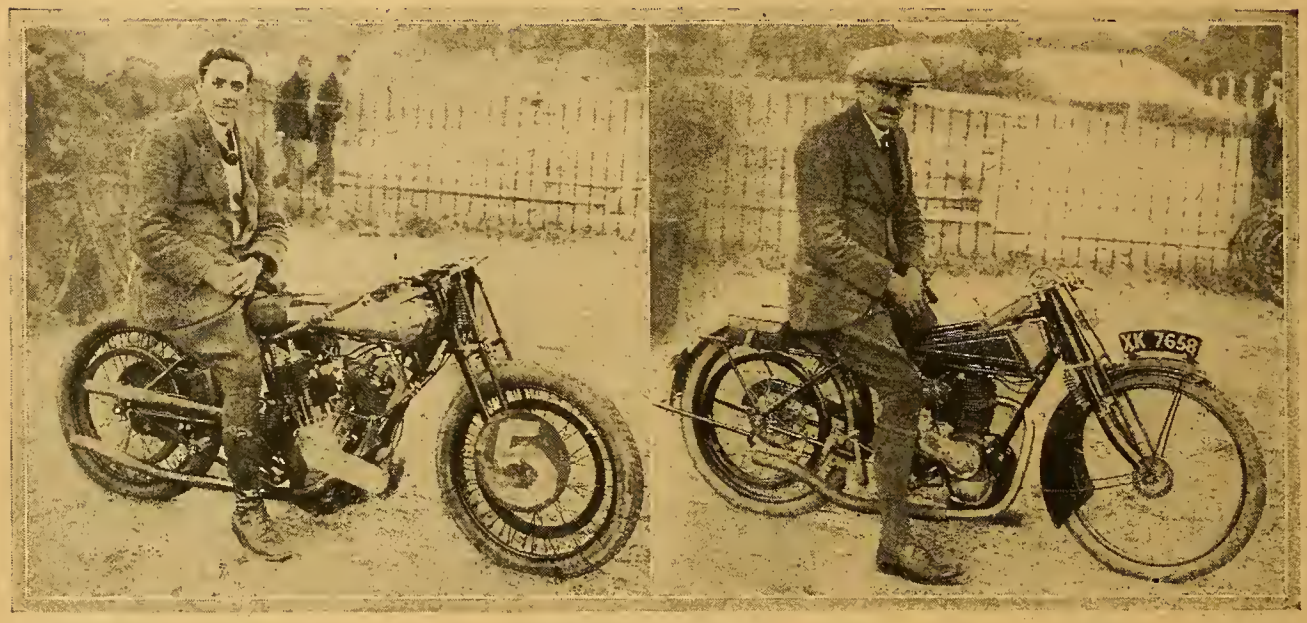
Cup, for fastest time (novice): O. Jessop (482 Sunbeam)

Mitchell and Butler Trophy, for fastest time by rider resident within 30 miles of Colwyn Bay: A. S. Jones (481 Scott-Squirrel).

Over 7,000 spectators were present and, excepting H. D. Killick's unfortunate spill, the event was very successfully organised and carried through.

NEW-COMERS' SUCCESS AT BROOKLANDS.

Sleeve-Valve B. & S. Engine and 80 m.p.h. Brough Superior among the Winners at M.C.C. Brooklands Meeting.



G. Brough (976 c.c. Brough Superior), an easy winner of the unlimited solo handicap at 82·08 m.p.h.

A. S. Guthrie (350 c.c. Diamond-Barr-and-Stroud), who won by an unexpectedly big margin in the 350 c.c. handicap.

AT the M.C.C. Brooklands meeting on Saturday, two new-comers to the track were successful in winning races at a first attempt.

A Barr and Stroud-engined Diamond opened the ball by romping home first by a big margin in the 350 c.c. handicap, the speed being 54.96 m.p.h.; and in the unlimited handicap a side-valve Brough-Superior driven by George Brough himself, won equally decisively at 82.05 m.p.h.

For the rest, the results might have been those of any B.M.C.R.C. event, H. Le Vack (New Imperial), J. Emerson (Douglas), and C. F. Temple (Harley-Davidson), being the winners of the three big solo scratch events.

Rain causes Curtailment.

Rain caused the curtailment of the meeting at 4.30 p.m., when it was announced that the remaining classes would be embodied in the Ealing Club's programme on the 29th inst.

All the races started and finished at the fork, and were of three laps duration.

Guthrie's win in the opening event—a 350 c.c. handicap—was quite unexpected, the favourites being C. G. Pullin (Douglas) and H. Le Vack (o.h.v. New Imperial), who were both on the scratch mark. As it turned out, three of the generonsly handicapped men were placed, and Le Vack succeeded, by reason of superior acceleration at the start, in leading Pullin all the way for fourth place.

350 C.C. SOLO HANDICAP.
1. A. S. Guthrie (350 Diamond), handicap 2m. 51s.
2. H. F. Edwards (249 New Imperial), 1m. 59s.
3. R. B. Clark (346 New Imperial), 27s.
Winner's speed = 54.96 m.p.h.

All the engines in the next—560 c.c.—handicap varied by no more than 9 c.c., and matters evolved themselves into a very fine but just unsuccessful attempt by F. B. Halford (499 Triumph) to gain 69s. on E. W. Spencer (499 Douglas). Both Emerson and Pullin were unable to beat their 9s. allowance to Halford.

350-560 C.C SOLO HANDICAP.
1. E. W. Spencer (499 Douglas), handicap 1m. 18s.
2. F. B. Halford (499 Trinmph), 9s.
3. A. F. Scroggs (496 Sunbeam), 1m. 18s.
Winner's speed = 65.66 m.p.h.

Next came the Brough-Superior's triumph, F. A. Longman (994 Ariel-M.A.G.), Le Vack (988 Zenith) and Temple (989 Harley) were the only other starters. A 6s. concession to Le Vack was too much for Temple, this time, anyhow.

OVER 560 C.C. SOLO HANDICAP.
1. G. Brough (976 Brough-Superior), 1m. 3s.
2. H. Le Vack (988 Zenith), 6s.
3. C. F. Temple (989 Harley-Davidson), scratch.
Winner's speed = 82.08 m.p.h.

Including B. F. C. Fellowes' historic 1899 De Dion, there were six starters in the first scratch event, but it was obviously going to be another Pullin-Le Vack duel with S. R. Axford on a 1921 T.T. A.J.S. as a dangerous dark horse. The New Imperial rider led throughout, and for two laps Axford and Pullin battled for a very close second place. Then Pullin retired, and Le Vack increased his lead slightly.

350 C.C. SOLO SCRATCH RACE.
1. H. Le Vack (346 New Imperial).
2. Major S. R. Axford (349 A.J.S.).
3. F. J Youngs (348 O.K.).
Winner's speed=71.31 m.p.h.

Halford's Triumph and Pullin's and Emerson's Douglases on level terms provided all the excitement in a well-supported "five-sixty" race. Halford and Emerson rode neck and neck for one lap with Pullin a few yards behind; next time round Pullin had changed places with Halford; and so they finished. It was the most thrilling struggle of the day.

560 C.C. SOLO SCRATCH RACE.
1. J. Emerson (494 Douglas).
2. C. G. Pullin (494 Douglas).
3. F. B. Halford (499 Triumph).
Winner's speed = 78.15 m.p.h.

Temple and Le Vack now staged another hard-fought contest, won, but not easily, by the former, whose speed, incidentally, was only 1.4 m.p.h. faster than G. Brough earlier in the afternoon.

OVER 560 C.C. SCRATCH RACE.
1. C. F. Temple (989 Harley-Davidson).
2. H. Le Vack (988 Zenith-Jap).
Winner's speed = 83.48 m.p.h.

What turned out to be the last race of the day—the 560 c.c. sidecar handicap—failed to arouse much excitement. J. S. Holroyd (346 Holroyd sc.) led until the last lap, when R. Newett overtook him to gain yet another Douglas victory.

600 C.C. SIDECAR HANDICAP.
1. R. Newett (499 Douglas sc.), handicap 2m. 0s.
2. J. S. Holroyd (346 Holroyd sc.), 3m. 18s.
3. C. Dickenson (498 Ariel sc.), 3m. 18s.
Winner's speed = 56.03 m.p.h.

Eng. Lieut.-Cmdr. A. K. Dibley (998 c.c. Indian) at the top of White Downs Hill. The surface lower down is particularly difficult, and several experienced trouble.

Naval Officers' Big Annual Event Won on Last Lap by Eng. Lt.-Com. S. G. Wheeler (490 Norton).

ALTHOUGH there are hundreds of motor cyclists in the Royal Navy, it is naturally a difficult matter to get a really large entry for such an event as the trial for the Arbuthnot Trophy. Yet this year, despite the naval operations off the coast of Devon, witnessed the best assembly with which this unique trial has yet been favoured. The event took place on Friday and Saturday last.

From Burford Bridge.

To describe the course in detail would be futile, but the following gives a rough idea of its nature. It formed a crude figure 8, one loop of which was covered before tea, and the other after, each lap being about 46 miles in length. Starting from Burford Bridge Hotel at 2 p.m. on Friday, the first item of interest was Ranmore Common, and quite early T. E. N. Knox (496 Martinsyde) left the course and lost much time.

Heavy showers fell during the first lap, turning the surface of the lanes into grease, and causing several retirements and troubles.

After climbing White Downs the competitors ascended through the woods on Netley Heath, and, reaching the main Guildford Road, carried on down a precipitous hill with a greasy surface. Here E. F. H. Lawson (490 Norton) suffered a slack hub nut and two skids; P. H. E. Welby-Everard (499 Rudge-Multi) skidded and ran into a fence; and H. A. Higgs (996 Brough Superior) fell twice in this locality. All agreed that they would rather ride up than down this terrifying hill. (Next day their wish was gratified.)

After Shere, that old favourite Combe Bottom was included, and here the first dozen men came up quite well, except A. D. Merriman (349 Beardmore) and Knox, who skidded. H. D. Chads (499 Triumph), joint holder of the trophy, made an excellent climb, as did C. A. Hutchison (292 Allon). The latter as No. 1 had taken great pains to keep to the course, and had made an outline map, carried on the handle-bars, showing the time he was due at every point; notwithstanding, he left the road once or twice. The marking was quite good on the whole. E. S. K. Evans-Greaves (976 Brough Superior), who won the first Trophy Trial (in 1919), came up riding beautifully; H. E. Welby-Everard (Rudge) foot-slogged, and then stopped after the corner.

Surrey Bye-lanes.

More by-roads followed. Newlands Corner was climbed, and then the men descended a cart-track to Albury, returning to Dorking, *viâ* Ewhurst, Holmbury St. Mary, down Tanhurst Hill, and through Redlands Woods.

During the tea stop, one heard of several incidents. E. S. K. Evans-Greaves (Brough Superior) left the course, and the saddle-peak support breaking, he fell on his head, and hurt his arm. He remounted but fell off again seven times and retired. R. T. Grogan (490 Norton), who did so well at Brooklands recently, retired with back spindle trouble. G. F. Mandeville (481 Scott-Squirrel) ran into a patch of soft clay at Newlands Corner. C. P. Robertson (490 Norton) and M. A. C. Slipper (499 Rudge-Multi) withdrew, and R. A. Braine (976 Brough Superior) had a loose exhaust pipe early in the lap. L. E. K. Rebbeck (Douglas) suffered timing gear trouble.

Only Six Clean Sheets.

These withdrawals and other casualties left six men in the running for the cup, J. H. Illingworth (499 Sunbeam), G. F. Mandeville (481 Scott-Squirrel), S. G. Wheeler (490 Norton), H. B. Baker (A.B.C.), Searles-Wood (499 Sunbeam), and H. D. Chads (499 o.h.v. Triumph).

After tea the weather cleared and the course was easier. Leaving Burford Bridge, a turn to the left was taken just short of Dorking Station, which leads on to the Dorking-Reigate road. Here F. H. Kennedy (998 Indian) fell, causing his retirement, but he was quite unable to account for his fall.

The Arbuthnot Trophy Trial.—

Pebblecombe caused no difficulty. Walton Heath was then crossed and the Brighton road followed; next a turn to the left was taken through pretty country, and eventually Wray Lane was reached and descended. After Merstham, White Hill was climbed and Arthur's Seat descended. Then followed three miles of tricky driving to Caterham Station, Coulsdon; and a journey through winding lanes to Banstead and Chipstead, eventually bringing the competitors home down Little Pebble Hill and Little Switzerland.

After suffering a number of side-slips in the first lap, A. D. Merriman (350 Beardmore-Precision) retired in the second, and C. A. Hutchison (Allon) had two stops owing to plug trouble and losing his way. The remainder made non-stop runs.

At the end of the first day, therefore, the same six men as made non-stop runs in the first lap remained in the running for the trophy.

The Second Day.

Though threatening, Saturday morning was fine, and fifteen survivors faced the starter. So as to ensure the finding of a winner, rather more importance was laid on punctuality than before, and a check was established at Newlands Corner on each lap. Though genuine amateur riders in every case, the men rode most consistently. Saturday's course was Friday's reversed. Consequently, Crocknorth Hill, the precipitous descent of which had been the bane of the competitors on the Friday, was the *pièce de résistance* as regards hill-climbing on the Saturday. It is but a track through beautiful woods, but greasy and steep. There was, however, some good riding. Wheeler (490 Norton) came up well, but made somewhat of a struggle over the crest, and Chads (499 Triumph) made a perfect ascent, but several clean sheets were spoilt by this hill. H .B. Baker (A.B.C.) failed the first time, and then made a splendid climb; Searles-Wood (Sunbeam) retired as he had lost his way earlier in the morning; Hutchison (292 Allon) made

The Trophy Winner—Eng. Comdr. S. G. Wheeler (490 c.c. Norton) on Whitedowns hill.

a good climb. Mandeville (Scott-Squirrel) failed—apparently owing to too high a gear—as did Illingworth (Sunbeam), Higgs (Norton), and Knox (Martinsyde). Dibley lost his way and retired, and only Wheeler and Chads were left with chances of gaining the trophy. Of these Chads was proving to be the better time-keeper.

Some interesting observations were made at the Headley hair-pin on the last lap. Here the men having come up through Little Switzerland had to turn sharply to the left up a piece of rough road, and although the route was clearly marked and Searles-Wood held up a card marked LEFT and pointed the way with extended arm, Hutchison, Chads, and another overshot the mark simply through inattention. Of the two favourites Chads had to turn to come back to the hair-pin, and Wheeler tried to take the turn on second, and only engaged his first in the nick of time. At Newlands Corner the cart-track leading to the check was climbed. On arriving at the check, Baker (398 A.B.C.), Chads (499 Triumph), and Knox (496 Martinsyde) made figures of 8 on the grass in sight of the time-keeper, making humorous remarks the while, until they were due to start.

An Exciting Ending.

As the end drew near there was great excitement as to who would be the winner. Sam Wheeler (490 Norton) arrived on the nick of time, but alas! poor Chads was missing. He arrived over ten minutes late, having lost his way near Reigate. S. G. Wheeler, therefore, was the indisputable winner. He rode a 490 c.c. Norton fitted with the invention of his brother—a floatless variable choke carburetter, which worked admirably. Thus ended the fourth Arbuthnot Trophy Trial, quite the best of the series.

In addition to the trophy winner, the following were awarded gold medals :—

Lt.-Comdr. C. A. G. Hutchison (292 Allon), Midshipman J. H. Illingworth (499 Sunbeam), Sub-Lt. G. F. Mandeville (481 Scott-Squirrel), Lt. H. D. Chads (499 Triumph), and Sub-Lt. T. M. Brownrigg (550 Triumph).

Sub-Lt. P. H. E. Welby-Everard (499 Rudge-multi), who rode extremely well, climbing Crocknorth Hill on the only belt-driven machine, and had a time error of only 2 min. 41 sec., was awarded the cup presented by Lt. E. S. K. Evan Greaves to the rider who put up the best performance under adverse conditions.

Lieut. H. B. Baker (398 c.c. A.B.C.) in rough going at the top of Newlands Corner.

Sub.-Lieut. J. I. Robertson (349 c.c. A.J.S.) and Lieut. F. H. Kennedy (998 c.c. Indian) at Newlands Corner.

IN SURREY AND KENT.

South-Eastern Centre A.C.U. Open Trial from Caterham.

AS the crow flies the competitors in last Saturday's one-day trial of the South-Eastern Centre, A.C.U., were never more than a dozen miles from the starting point.

None of the thirty-eight starters happened to be crows, however, so in getting out of Caterham from one side to getting back into Caterham from the other a little trip of fifty-three miles was accomplished.

Small Entry.

No doubt owing to lack of publicity concerning the event only a small entry was received. This was unfortunate, as the trial was a most interesting one, and its late start (at 10 a.m.) was most satisfactory to those who dislike hurried breakfasts and the tying on of official numbers in the cold grey dawn.

To describe the course of the trial in detail is almost impossible, for the endeavour of the route finders seemed to have been to traverse every winding and hilly lane between Caterham and Shoreham. In the afternoon the morning circuit was reversed, so that some of the tests were very different; for example, a rough stony descent in the morning which proved trying to riders with brake-locked back wheels became merely an easy climb in the afternoon; it is often noticeable, of course, that machines are easier to control when climbing.

Apparently there was no plan to save up the worst hill until the riders had got used to their tasks, for in a couple of miles the first and one of the worst tests was encountered. This was Succombs Hill, a really severe gradient approaching 1 in 4 and of that chalky and slimy stone peculiar to the district. To make matters worse the hill was entered by a by-road opening at right angles on to the worst portion.

On Yorkshire and Derbyshire limestone Succombs Hill would be a fairly hard climb, but a sure one for most machines. With its own peculiar surface it is difficult for solo men and touch-and-go with passenger machines; on a wet day it would be well-nigh impossible without non-skid chains.

A trio of solo riders on the rock-strewn lane at Titsey: E. C. Gordon (499 c.c. Triumph), Clifford Bowen (398 c.c. A.B.C.) and A. R. Wood (595 c.c. Indian).

Competitors on the grass-grown track of Scottshall Hill. W. Bucknell (976 c.c. Matchless sidecar) and L. J. Bucknell (976 c.c. Royal Enfield sidecar) both of the Croydon and District M.C.C. team.

The weather on Saturday morning at any rate gave everyone a favourable opportunity, but even so only one soloist made an undeviating and at the same time swift ascent; this one was R. Green (490 Norton). Excellent ascents at a slower speed were made by E. C. Gordon (499 Triumph), E. L. Showell (678 Martinsyde), C. Bowen (398 A.B.C.), A. R. Wood (595 Indian), J. E. J. Whitaker (499 Sunbeam), and H. A. Hampton (499 Sunbeam). Really good riding of a non-spectacular order was displayed by P. L. Mayo (249 Coventry Eagle) and A. H. Cox (499 Triumph). Others who made non-stop climbs were Mrs. G. M. Janson (211 Levis). W. E. Heborn (293 Monopole). T. G. Meeten (650 Indian), R. V. Crawford (654 P.V.), J. A. Newman (499 Douglas), F. A. McNab (654 Trump-Jap), A. H. Love (490 Norton), R. P. Steytler (349 P.V.), and B. J. Slade (348 Omega).

Less Successful.

There was one more soloist, J. F. Perrin (499 Zenith-Bradshaw), who also did not stop, but he had the greatest difficulty in keeping his skidding machine on the road; however, after some game struggles he reached the top. Another unfortunate, C. B. I'Anson, was mounted on a similar machine, but he had only the Gradua gear and failed to make the ascent.

R. M. Stewart (654 Trump-Jap) conked out unaccountably, R. A. Cass (349 Mohawk) failed, V. Vinnimore (499 P. and M.) skidded on the corner and fell, and his team mate, E. F. Chidley, used his feet for steadying purposes considerably, and finally took to the footpath.

H. A. Hampton (499 c.c. Sunbeam) and A. H. Cox (499 c.c. Triumph) rounding a bend on Titsey Hill.

Amongst the sidecars good ascents were made by P. W. White (976 Sunbeam sc.), who cleverly dodged a failing soloist. H. Jepson, on one of the new 976 c.c. three-speed Zeniths, was fast despite a slightly spinning wheel. E. O. Spence (989 Harley-D. sc.) was slow. P. Cunningham (555 P. and M. sc.) had his passenger well over the carrier. T. J. Ross (993 Matchless sc.), E. Eland (557 B.S.A. sc.), W. Bucknell (993 Matchless sc.). and L. J. Bucknell (976 Royal Enfield sc.) were excellent. W. Stevenson (976 Chater-Lea sc.) was steady. E. C. Barton (993 Matchless sc.) was not quite up to the standard of the other Matchless outfits. A. F. Pulling (976 Royal Enfield sc.) rushed the corner at speed, but without avail. The last sidecar was G. Baxter's Harley-Davidson, which climbed well, as did the only three-wheeler, a Morgan driven by J. A. McCarthy.

Incidents.

Not far after this point J. A. Newman was involved in a collision with a cyclist, and his Douglas was too damaged to continue. A. Pulling, on the Royal Enfield sidecar, collided with a bank and broke his fork spindles, having to retire. Baxter (989 Harley-D. sc.) was reported as having had a spill, but he carried on.

A rough little ascent at Scottshall Farm proved difficult, and some wheel slip was experienced on Salt Box; and there were several failures on Crown Ash. Titsey Hill was entered by a steep chalky lane, but only one failed at this point through missing his gear. After descending Chalk Pit Hill a steep climb through a wood (known as Tubbs Hill) resulted in practically every passenger machine failing with wheel spin. From Oxted to Caterham was easy running.

The Reverse Circuit.

After lunch all restarted except C. B. I'Anson (499 Zenith-Bradshaw), R. N. Stewart (654 Trump-Jap), R. A. Cass (349 Mohawk), J. A. Newman (496 Douglas) and A. F. Pulling (976 Royal Enfield sc.). As before non-stop rules prevailed.

The afternoon's run round the reverse direction of the course was a little easier until rain set in, which it did most inopportunely just as a short grassy rise at Scottshall Farm had to be ascended. However, even this did not cause any stops, but H. Jepson (976 Zenith sc.) had a bad attack of wheel slip, and only preserved his non-stop by good jockeying. The two P.V. machines made particularly nice climbs here, and R. Green (490 Norton) was again fast and sure.

Contrary to expectations, Chalk Pit and the rough climb at Titsey had caused no serious trouble. W. Stevenson's 976 c.c. Chater-Lea outfit being the only one to stop on the latter gradient. Near the finish W. E. Heborn (349 Monopole) had a skid which compelled his retirement.

Finish in the Rain.

E. L. Showell (678 Martinsyde) came up Scottshall very late, pointing to his tyres, while the Morgan was seen no more. Heavy rain fell as the competitors returned to Caterham via the downward slope of Succombs Hill, but twenty-six checked in during the downpour.

RESULTS.

GOLD MEDAL.

H. Jepson (976 Zenith sc.).

SILVER MEDALS.

E. C. Gordon (499 Triumph).
P. L. Mayo (249 Coventry Eagle).

BRONZE MEDALS.

Mrs. G. M. Janson (211 Levis).
A. R. Wood (585 Indian).
E. M. Chidley (499 P. and M.).
A. H. Cox (499 Triumph).

SEVERE 24-HOUR TRIAL.

Birmingham-Holyhead and Back. M.C. and A.C. Event in the Rain. Many New Hills.

HEAVY rain converted the Midland Cycling and Athletic Club and the Midland Car Club's twenty-four-hour trial from a moderately stiff test to a really severe trial for both men and machines.

Under these conditions it is creditable that out of 47 motor cycle and sidecar entries and four three-wheelers, no less than 31 of the former and all the latter reached the finishing point within their time allowance, though comparatively few retained really clean sheets.

Several interesting machines gathered at the start, at the Sansome Davis Garage on the Birmingham-Stratford road, on Friday evening at 7 o'clock.

Brinkworth's open-frame Omega was fitted with a 350 c.c. o.h.v. Blackburne engine, though his companion Ferriday had the standard two-stroke in a similar frame. Greaves' Barr and Stroud engined Beardmore had a novel exhaust pipe, the main bend taking the form of a sheet steel expansion chamber; Lewis on a 598 c.c. Beardmore Precision had sheet metal ribs to his exhaust pipe; and the Connaught riders apparently had inside information, since they turned out with high exhaust and inlet pipes, prepared for water.

An Early Watersplash.

As a matter of fact a very fair splash with a firm bottom but of some width and depth occurred in the second mile of the course and had to be crossed once more as a final obstacle. It was, however, a fair test, such as any standard machine should be able to negotiate, yet it caught a few napping. Weighing-in operations took place four miles from the start and were so well handled that there was no appreciable delay.

From Longbridge good roads were followed through Bromsgrove, Kidderminster, Bridgnorth, and Much Wenlock to Shrewsbury, where the first time check was located. Machines were parked in the beautifully equipped Raven Garage, while the riders were allowed over an hour for supper.

Severe 24-hours Trial.—

With lamps alight the long procession sallied forth on the main road to Holyhead, and there was wonderfully little lamp trouble throughout the night—a tribute to modern lighting sets.

Beyond Bettws-y-Coed some thirty or forty competitors were temporarily held up on account of a serious fire at Gwydyr Castle, as it was feared that accidents might occur with the oncoming fire engines.

So far the journey had been fine, but at Bangor, in the early hours of the morning, rain began to fall and scarcely stopped again until Wales was left behind.

One hundred and seventy-one miles from the start, Holyhead was the scene of the second time check and a welcome breakfast stop.

Back over the Menai Bridge through Carnarvon to Llanberris brought the first real test of the trial. Cefn-Du is a typical Welsh side road leading over a spur of Snowdon and having a surface composed of slate and grass.

On a critical portion of Bwlch-y-groes: L. E. Clulee (292 c.c. Allon) passing W. G. Harrison (349 c.c. Coulson-B), who suffered from belt slip.

Deceptive surfaces.

The hill rises for nearly two miles in a series of steps having a maximum gradient of about 1 in 5½; there is also a left-hand corner about half-way up, and it was here that most of the trouble arose. There was a reasonable path round the outside of the corner, but many were deceived by the apparently safe surface in the middle, and even light solo machines were troubled with wheel slip. Amongst these unfortunates were W. Hough (349 A.J.S.), and W. Gibb (494 Douglas). D. Atkin (346 Hobart) was in difficulties, but whether he actually stopped is a matter of doubt; he was not, however, in good health and the night ride had told on him, so that he retired shortly afterwards. F. Downs on a companion machine was baulked but restarted. Frank Smith (925 Clyno sc.), R. Scott-Walford (997 Excelsior sc.), one of the Rudge outfits, and indeed most of the sidecars experienced severe wheel slip, but as far as is known F. W. Giles (799 A.J.S. sc.), L. Newey (992 Ariel sc.), and F. H. Brown (550 Rex Acme sc.) made clean ascents. The three-wheelers all climbed well.

The route now led on through Beddgelert to the third time check at Harlech.

A fourth time check took place at Dinas-Mawdwy, and then came a timed ascent of Bwlch-y-Groes, the results of which will decide ties for premier awards.

On the whole the performances were good, but though we are without knowledge of the actual times taken the following appeared to stand out:—

E. A. Barnett (346 Francis-Barnett), H. Brinkworth (349 Omega), W. Hough (349 A.J.S.), R. F. Turner (249 New Imperial), H. Greathead (348 Ivy), W. Knight (499 Triumph), W. Hill (348 H.B.), A. R. Evans (499 Sunbeam), W. Gibb (494 Douglas), G. Butcher (499 Sunbeam), R. C. Atcherley (499 Triumph), L. Newey (992 Ariel sc.), H. G. Uzzel (976 New Imperial sc.), F. H. Brown (550 Rex-Acme sc.), and F. W. Giles (799 A.J.S. sc.), whose performance was almost startlingly fast. Of the three-wheeled cyclecars, F. Spouse (1098 T.B.) appeared to be the best.

After lunch at Bala, rain continued to fall heavily, and some five miles from the stop came a rough narrow ascent known as Cefn Coch. Though steep, the hill caused little trouble, but F. Ferriday (348 Omega) shed a chain.

A gate and a short stretch of wet grass led to the main mountain road to Llanfyllin, and a strong headwind with rain driving almost horizontally made the trip most unpleasant. After Llanfyllin a rough and greasy ascent and a dangerously greasy descent with an acute left-hand hairpin led to Peniarth hill, an uneven climb of no great severity.

Few clean climbs.

Moel-y-Golfa hill is a narrow lane nearly two miles long rising in three steep steps of very rough and very greasy surface. Really clean climbs were few and far between, since the surface was such that solo riders had the greatest difficulty in keeping upright.

Through Shrewsbury, once more, to a tea check at Cound, the next point of interest was Harley bank, where the stop and restart test was held. It was too easy to cause trouble, though for some unknown reason Brinkworth (Omega) failed to get away cleanly.

Returning through Bridgnorth and Kidderminster, Hagley Wood hill was the next obstacle—too easy for comment—thence over a grass track to Walton hill. Here C. B. Hemphill (348 Excelsior) failed to change cleanly, and stopped; and W. Johnson failed with a burnt-out clutch, spoiling the fine performance of the Allon team. W. G. Harrison (348 Coulson) also failed. The best ascents were made by N. Hall (348 O.K. Blackburne), W. Hough (348 A.J.S.), G. Butcher (498 Sunbeam), H. G. Uzzel (976 New Imperial sc.), F. H. Brown (550 Rex-Acme sc.), F. W. Giles (799 A.J.S. sc.), and L. A. Bees (598 Beardmore-Precision sc.),

Spectators on Beacon.

As usual Beacon Hill attracted a fair crowd of spectators, but it is an easy climb, and the brake test at Rose Hill was more interesting. Competitors were required to cover a measured distance at a minimum of 10 m.p.h., and to pull up in 9 ft. This test was performed satisfactorily by the majority, but the following lost marks either for being too slow or for overshooting the tape: P. G. Dallison (293 Connaught), F. V. Wood 293 (Connaught), N. Hall (348 O.K. Junior), W. Rudge (293 Connaught), C. B. Hemphill (348 Excelsior), W. Johnson (292 Allon), W. G. Harrison (348 Coulson), A. R. Evans (498 Sunbeam), W. B. Gibb (494 Douglas), C. L. Reading (498 Ariel), T. W. Meridith (1098 T.B.), and F. Spouse (1098 T.B.). Outstanding performances must be credited to W. Hough (348 A.J.S.), E. R. Jacobs (348 Beardmore-Precision), J. Sykes (596 Sunbeam) and R. W. Duke (499 Triumph).

From Longbridge to the finish the outward route was followed in a reverse direction, and only four miles from home E. A. Barnett (348 Francis-Barnett) lost his way and checked in four minutes late. This was a most unfortunate occurrence, for in spite of a heavy fall near Bala in which his machine was considerably damaged, he climbed all hills and rode most consistently. A large crowd round the Sansome Davis garage welcomed the returning competitors with cheers.

Club News

Knock M.C.C.

The social run held recently, starting from Neils Hill, Belfast, at 2.30, and finishing at Ballywalter, was an unqualified success, covering a distance of about 30 miles, which competitors had to complete at an average speed of 20 m.p.h.

Richmond and District M.C.C.

Proposals are at present on foot to organise a club for this district, and although the Ealing and the Surbiton Clubs are not far distant, it is still thought that motor cyclists in the actual Richmond district would welcome a club of their own formation. Those interested in the scheme should communicate with Mr. D. A. Griffith, at "Derriston," London Rd., Twickenham, who will supply all details in connection with it.

Darlington and District M.C.C.

A sporting trial was held on Wednesday evening, the 5th inst., and was very successful, although rather spoiled by rain towards the end of the event. The course included the ascent of Peat Fell, which is 1,333 feet above sea level. First place was won by J. M. Richmond (490 Norton sc.), followed by J. W. Moffet (10 G.N. light car), whilst W. A. Porter (249 Velocette) came in third.

Surbiton M.C.

Arrangements have been made, in conjunction with the Vaudeville Club of Thames Ditton, for holding a social evening, preceded by a trial run at Thames Ditton on the 20th inst., to take place in connection with the Disabled Drivers' M.C. Dancing, billiards, and cards are among the attractions offered; the course will not be at all strenuous, and the rules have purposely been kept simple to ensure a good entry. Particulars are available from Mr. Kaye Don, 6, Anglesea Rd., Kingston.

South Shields and District M.C.C.

The handicap hill climb which took place at Maggleswick Common, Durham, on the 2nd inst. over a half-mile course, was open to all clubs affiliated to the North-Eastern Centre, A.C.U., and some good performances were made. Results:—350 c.c. Class: Davidson Hall (349 New Scale), 41s. 600 c.c. Class: S. Bell (490 Norton), 34⅘s. Unlimited c.c. Class: S. Bell (490 Norton), 34⅘s., which was the fastest time of the day. The handicap winners were:—(1) K. Dixon (499 Sunbeam), 36⅕s. (2) M. Gardner (499 Triumph).

Rochester, Chatham and District M.C.C.

Below are given the results of the Brooklands meeting held in conjunction with the West Kent and Brighton and Croydon M.C.C. on the 1st inst.:—

350 c.c. Class (Amateur).—(1) A. Peet (349 A.J.S.). (2) R. Dequio (348 Ivy). (3) C. Quick (348 Rex-Acme). Expert:—(1) E. Remington (292 Edmund). (2) A. Fraser (348 Douglas). (3) T. Eve (348 Douglas).

600 c.c. Class (Amateur).—(1) — Hewitt (494 Douglas). (2) — Watt (499 Sunbeam). (3) — Sharpe (494 Douglas). (Expert).—(1) G. Maund (398 A.B.C.). (2) C. Volk (494 Douglas). (3) G Newman (499 Sunbeam).

1,000 c.c. Class (Amateur).—(1) — Watt (499 Sunbeam). (2) J E. Whitacker (499 Sunbeam). (3) — Sharpe (494 Douglas) (Expert).—(1) G. Maund (398 A.B.C.). (2) G. Newman (499 Sunbeam). (3) C. Volk (494 Douglas).

1,000 c.c. Sidecars.—(1) W. Bucknell (976 Matchless sc.). (2) — Clarke (550 Triumph sc.). (3) — Potts (998 Harley-Davidson sc.).

The Woodman Cup.—(1) G. Maund (398 A.B.C.) (2) E Remington (292 Edmund. (3) T. Eve (348 Douglas).

The Winners' Handicap.—(1) C. Volk (494 Douglas). (2) T. Eve (348 Douglas). (3) J. E. Whitacker (499 Sunbeam).

Doncaster and District M.C.C.

Arrangements have now been completed for the next speed trials, which are to take place on Thursday, the 20th inst., and full particulars may be obtained from Mr. L. Callender, 55a, St. Sepulchre Gate, Doncaster.

East Midland Centre A.C.U.

In view of the fact that the second round for the Centre Cup has been incorporated in the Clipstone Drive speed trials on the 29th inst., it has been decided to make the event open to all clubs in the Centre. The Loughborough and District M.C.C. has offered a silver cup to the member who makes the fastest time.

Week-End Club Events.

July 14th.—Coatbridge, Airdrie and District M.C.C.—Reliability Trial.
July 15th.—Worcestershire M.C. and District M.C.C.—Reliability Trial.
July 15th.—Mid Bucks M.C.C.—Social Run.
July 15th.—Gloucester M.C. and L.C.C.—Run through Forest of Dean, etc.
July 15th.—Birmingham M.C.C.—Hill Climb.
July 15th.—Bulwell M.C.—Hill Climb.
July 15th.—Dewsbury and District M.C.C.—Secretary's Surprise Run.
July 15th.—Walsall and District M.C. and West Birmingham M.C.C.—Reliability Trial.
July 15th.—South Midland Centre A.C.U.—Reliability Trial.
July 16th.—Reigate, Redhill and District M.C.C.—Social Run to Windsor.
July 16th.—Exeter M.C. and J.C.C.—Run to Maidencombe.
July 16th.—Leeds M.U.—Inter-club Run with Wakefield.
July 16th.—Prestwich and District M.C.C.—Hill Climb.
July 16th.—Manchester M.C.—Reliability Trial.
July 16th.—Rochester, Chatham and District M.C. and L.C.C., and West Kent M.C.—Inter-club Hill Climb at Shoreham.
July 16th.—Woolwich and District M.C.C.—Members' Team Trial.
July 16th.—Wallington and District M.C. and L.C.C.—Social Run.
July 16th.—Atherton and District M.C.C.—Run to Llangollen.
July 16th.—Loughborough and District M.C.C.—Trial for Will Chapman Cup.
July 16th.—Coventry Triangle M.C.—Run to Bromsgrove Lickeys.
July 16th.—Sheffield M.C.—Run to Rudyard Lake.
July 16th.—York and District M.C.—Run.
July 16th.—Newcastle and Northern M.C.—Consistency Hill Climb.
July 16th.—Bristol M.C. and L.C.C.—Day on the River at Salford.
July 16th.—Eastbourne and District M.C.C.—Reliability Trial.
July 16th.—Berkhamstead and District M.C.C.—Speed Judging and Balloon Chase.
July 16th.—Rotherham and District M.C.—Run to Harrogate.
July 17th.—Essex County and Southend A.C.—Village Seeking Competition.
July 18th.—Gloucester M.C. and L.C.C.—Evening Hill Climb.
July 19th.—York and District M.C.C.—Run to Kilburn Bank.
July 19th.—Leeds M.U.—Impromptu Run.
July 20th.—Bridgnorth and District M.C.C.—Hill Climb.
July 20th.—Worcestershire M.C. and District M.C.C.—Visit to Austin Motor Works.
July 20th.—Doncaster and District M.C.C.—Speed Trials.

Westmorland M.C.C.

A sporting trial over a difficult but well-directed course has been arranged to take place on the 23rd inst. for enthusiasts of this kind of trial. Entries will be received up to the moment of starting, which has been fixed at 9.0 a.m. from the County Hotel, Kendal. Any further particulars required may be obtained from Mr. J. P. Johnson, East Baok, Kendal.

North London M.C.C.

The annual sports were held at Radlett on the 1st inst., and although some rain fell, the success of the event was in no way interfered with. Riding the plank, a blindfold race, driving competitions, musical chairs, etc., were all keenly contested, and the afternoon was much enjoyed.

Sheffield and Hallamshire M.C. and L.C.C.

On Saturday, the 1st inst., a hill climb took place at Lodge Lane, Sheffield, when, in spite of a gradient that was none too easy and a bend near the finish, some good performances were made. The fastest time of the day was made by E. Searle (499 Sheffield-Henderson), his time being 32⅘s. Several interesting events are included in the programme for the near future.

West Birmingham M.C.C. and Walsall and District M.C.

An inter-club reliability trial has been arranged to take place on Saturday next (July 15th), open to motor cycles, sidecars, and three-wheelers. The course, starting from the Red Lion Hotel at Wombourne, will be approximately 80 miles in length. The various awards include the "Douglas Challenge Cup" presented by Messrs. Frank Whitworth, Ltd., for the best performance of a member of the West Birmingham Club, and "St. Swithin's" Challenge Cup for the most successful member of the Walsall and District Club. Communications should be addressed to Mr. N Rhodes at 212, High St., Bloxwich.

Newcastle and District M.C.

The results now to hand of the all-night run to Edinburgh and back from Newcastle are as follows: The Baker Challenge Trophy and silver ashtray for best performance, E. F. Walters (G.N. cycle car); Bainbridge Trophy and enamelled gold medal for best solo performance, Davidson Hall (496 N.U.T.); Ovaline Challenge Trophy and enamelled gold medal for best sidecar performance, T. W. Lorrey (490 Norton sc.); Douglas Challenge Bowl and club gold medal for best four-wheeler, E. F. Walters (G.N. light car); team prize, G. B. Bainbridge (Rolls-Royce), S. Bell (490 Norton), and A. Brewis (496 N.U.T.).

Gold Medals.—J. E. Reed (348 Wolf-Blackburne), G. Baker (994 Ariel sc.), and P. Hart (293 Calthorpe).

Silver Medals.—A. Brewis (496 N.U.T.), R. Ellis (496 N.U.T.), A. Stewart (496 N.U.T.), R. S. Scoon (654 Rover), T. Joynson (350 Invicta), N. McLean (490 Norton), A. Elliot (490 Norton), B. H. Cathrick (499 Dunelt), T. Wright (349 A.J.S.) J. E Thompson (349 A.J.S.), G. Watson (249 Velocette), H. Thompson (249 Velocette), S. Bell (490 Norton), H. Brogden (348 Douglas), H. Davies (678 N.U.T.), E. R. Cooper (799 A.J.S. sc.), J. McDonald (499 Dunelt), G. Heath (976 Matchless), G. F. Sturm (499 Dunelt), W. W. Chase (499 Dunelt), H. L. Young (933 Matchless sc.), A. Dixon (499 Rover), G. Watson (976 Matchless sc.), H. Tanake (1,301 Henderson), and J. Sawyer (499 Triumph).

Bronze Medals.—R. P. Reid (532 Scott), W. C. Thompson (496 N.U.T.), G. H. Twine (398 A.B.C.), B. J. Knight (499 Sunbeam), J. K. Hunter (350 Invicta), C. Leslie (350 Invicta), T. Thompson (490 Norton), J. Fairweather (269 Federation), M. N. Garbutt (499 Triumph), G. Batty (976 Dene sc.), N. Moore (976 Dene sc.), and J. A. Stewart (349 A.J.S.).

Members of the Norfolk and Norwich M.C. recently arranged a sidecar outing for the poor children of the district. The photograph depicts the start of the run, which was highly appreciated by the youngsters.

Weston-Super-Mare M.C.C.

A reliability trial is being held on Saturday, the 22nd inst., open to members of any club affiliated to the South Western Centre A.C.U. Particulars are available from Messrs. D. Read and Co., Orchard Street, Weston-super-Mare.

Lewes and District M.C.C.

An inter-team reliability trial took place on the 2nd inst. over a 90 miles sporting course, which included three water splashes. The winning team consisted of W. H. Law (349 Verus), G. E. Stacey (349 Verus), and S. Dunford (989 Harley-Davidson). The special award, a cup for the best individual performance, was won by H. V. Warren, of Eastbourne, on a 976 c.c. Royal Enfield sole, who completed the course without any less of marks.

Herts M.C. and L.C.C.

A stretch of road about 520 yards in length near Northaw, Potters Bar, was selected for the hill-climb held on June 29th. As many as seventy entries were received, and the results were as follows:

350 c.c. CLASS.—(1) H. Reyre (269 Reyre-Newson), 30s.=35.5 m.p.h., bronze medal; (2) O. D. D. Hall (293 New Imperial), 42⅖s.=25.2 m.p.h.

500 c.c. CLASS.—(1) E. C. Gordon (499 o.h.v. Triumph), 25s.=42.5 m.p.h., silver medal; (2) J. Hill (494 Douglas), 25s.=42.5 m.p.h., bronze medal (after a tie with W. Cox (490 Norton) at 26⅘s., Hill was the winner by one second).

BETWEEN 500 AND 600 C.C.—(1) G. C. Giddings (596 Indian), 32s.=33.2 m.p.h., bronze medal; (2) E. C. Gordon (499 o.h.v. Triumph), 32⅘s.=32.6 m.p.h.

750 c.c. CLASS.—(1) H. H. Saddington (654 James), 21⅘s.=48.8 m.p.h., silver medal; (2) E. C. Gordon (499 o.h.v. Trinmph), 23s.=48.8 m.p.h., bronze medal.

UNLIMITED CLASS.—(1) H. H. Saddington (654 James), 22⅖s.=47.9 m.p.h., silver medal; (2) E. C. Gordon (499 o.h.v. Triumph), 22⅘s.=47.1 m.p.h., bronze medal (after a tie with M. D. Borders (490 Norton).

600 c.c. SIDECAR CLASS.—(1) J. Hill (494 Douglas sc.), 29⅘s.=35.7 m.p.h., bronze medal; (2) H. B. Freeman 557 B.S.A. sc.), 51⅕s.=20.8 m.p.h.

800 c.c. SIDECAR CLASS.—(1) H. H. Saddington (654 James sc.), 27⅘s.=38.2 m.p.h., silver medal; (2) J. Hill (494 Douglas sc.), 31s.=34.3 m.p.h.

1,100 c.c. SIDECAR CLASS.—(1) H. H. Saddington (654 James sc.), 27⅕s.=39.1 m.p.h., silver medal; (2) J. Hill (494 Douglas sc.), 28⅘s.=36.9 m.p.h., bronze medal.

1,500 c.c. SIDECAR CLASS.—(1) H. H. Saddington (654 James sc.), 26⅘s.=36.6 m.p.h., silver medal; (2) W. H. Hardman (976 Matchless), 33⅘s.=31.8 m.p.h., bronze medal.

1,500 c.c. LIGHT CAR CLASS.—(1) A. A. Pollard (Alvis) 35⅕s.=30.2 m.p.h., silver medal; (2) G. Pollard (Alvis), 38⅘s.=27.7 m.p.h.

The fastest times of the day were put up by: (1) Sole meter cycles, H. H. Saddington (654 James), 48.8 m.p.h.; (2) Sidecars, H. H. Saddington (654 James), 39.6 m.p.h.; (3) Cars, A. A. Pollard (Alvis), 30.2 m.p.h.

Widnes M.C.

J. Mooney (499 Sunbeam) secured first place in the "Blake Cup" trial held on July 2nd over a main road course approximately 110 miles in length, followed by A. J. Sandand on a Mergan; A. J. Bailey (490 Norton sc.) came third, and J. Bardsley on a 678 c.c. Martinsyde and sidecar made a close fourth.

Tiverton M.C. and L.C.C.

There was only a small turn-out for the recent half-day reliability trial from Tiverton to Simonsbath and back by a different route, a total distance of about 90 miles. The hills were for the most part taken well, and the majority of the competitors checked in on time.

Berkhamsted and District M.C.C.

A successful reliability trial was held recently with the following results:—(1) L. Gower (550 Triumph) won the Porter Cup with a loss of 17 marks. (2) A. W. Howlett (498 Ariel), silver medal, lost 32 marks. (3) H. Sanders (633 Norton) lost 35 marks.

For the 16th inst. a speed-judging competition and balloon chase has been arranged, full particulars of which are now available from Mr. J. G. Craft, Apsley End, Hemel Hempstead, Herts.

Isle of Wight M.C.C.

The following results of the slow hill climb are now to hand:—

SOLO CLASS.—(1) H. Biles (293 New Imperial-Jap). (2) G. W. J. Marvin (595 Douglas). (3) G. Mansbridge (240 James).

SIDECAR CLASS.—(1) E. H. Darling (595 Douglas).

Wakefield and District M.C. and L.C.C.

Held recently over a 100-mile course, the annual reliability trial for the club silver cup was partly spoilt by the rain which fell heavily during the return journey. Out of eighteen entries fourteen started, with the following results: 1, S. E. Wood (Morris-Cowley car); 2, G. A. Smith (654 Quadrant sc.); 3, R. Leedal (1,098 Morgan).

Limerick and District M.C.C.

It is proposed to organise a motor cycle club in the Limerick district, including Clare and North Tipperary, provided that sufficient support is forthcoming. A meeting is being held on Friday, July 14th, to which all intending members are invited. All communications should be addressed to Mr. G. P. Quin, Corbally House, Limerick.

South Midland Centre A.C.U.

The reliability trial on Saturday, July 15th, will start from Frederic Street, Luton, at 10 a.m., and is open to motor cycles, sidecars, and three-wheeled cycle cars driven by members of clubs affiliated to this Centre. Entry forms and further particulars of the event may be obtained from Mr. C. Dickinson, 1, Frederic Street, Luton.

Neath and District M.C.

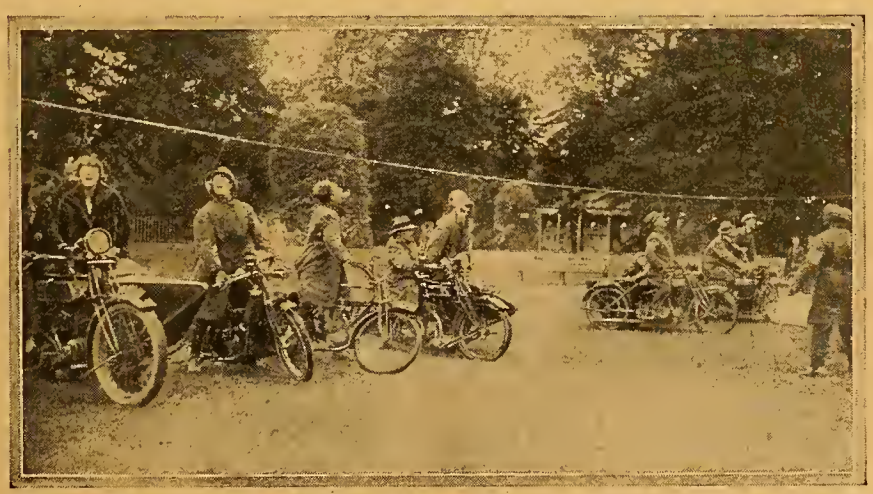
It is interesting to learn that this club has decided to hold a fifty-mile and a hundred-mile Welsh T.T. race on Pendine Sands on Bank Holiday Tuesday, August 8th, which marks the first attempt to hold a hundred-miles race in Wales. Full particulars of this event may be obtained from the honorary secretary, Mr. Haydn Evans, 9, Windsor Road, Neath.

Matlock and District M.C.C.

It is proposed to re-open a motor cycle club for this area covering a radius of twelve miles around Matlock. If sufficient support is offered it is hoped to organise a number of events during August and September, and to arrange lectures, etc., during the winter. Motor cyclists interested in the scheme are invited to attend a meeting at the Darley Bridge Garage, Darley Dale, at 7 p.m. on Saturday next, July 15th, or failing this, to communicate with Mr. E. F. Hurt at South Darley, Matlock.

Lee, Lewisham & District M.C. & L.C.C

The results of the "Ranger Cup" reliability trial, which took place at the end of last month, are as follows: The Ranger Challenge Cup and best performance under 350 c.c. sole, H. W. Allen (293 Coventry-Eagle), who gained 299 marks out of a possible 300. Best performance over 350 c.c. sole, H. Clifton (550 Triumph), 297. Best performance in sidecar class, E. Eland (557 B.S.A. sc.), 293. The special award for the novice, irrespective of class, was won by E. G. Griffen (269 Chater-Lea).



BRISTOL M.C.C. GYMKHANA AT BRISTOL ZOO. Competitors in the bun biting competition caused great amusement, each competitor having to eat the bun on the end of the string without touching it with his hands. Owners of A.J.S., Scott, Norton, and Douglas machines taking part in the competition.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle, Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp) and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

CONCERNING THE TWIN B.S.A.

(1) What is the best top gear ratio with medium weight sidecar for fast work in a level country? The top gear fitted to my 770 c.c. twin B.S.A. (5.5 to 1) seems rather low. (2) Can a silent front chain be fitted to this model? (3) Can twist grips be fitted?—J. J. L.

(1) 5 or 5¼ to 1; it is doubtful whether you will appreciably increase the speed by gearing higher than this. The ratio at present installed does seem rather low, but you should consult the makers before making a change. (2) A silent chain could not be fitted to this model without considerable alteration to the clutch and shock absorber. (3) Twist grip controls are marketed by most of the accessory houses, and they could be fitted to your machine.

SPEED AND GEAR RATIOS.

Shortly after purchase I tried my 633 c.c. Norton machine solo on a level road "all out." The speedometer, one of the magnetic type, pointed to 65 m.p.h. (1) Is this likely to be inaccurate? I have been told that this machine is geared a trifle low and advised to fit an engine sprocket of 18 teeth. (2) Would this be injurious to the engine (a) solo (b) with a light sidecar attached?—H.R.M.

(1) It is quite likely that the machine would do between 60 and 65 m.p.h., and there is no reason to doubt the accuracy of the speedometer. (2) A slightly higher top ratio will not be injurious to the engine, providing you do not allow the latter to labour on high gear when hill climbing or accelerating, especially when the sidecar is attached.

OVERHEAD CAMSHAFTS.

(1) Have overhead camshafts (bevel driven) any advantage over the push rod system? (2) What would you consider the maximum angle at which a motor cycle would be tilted when cornering at speed?—L.W.

(1) In the case of engines with a number of cylinders, especially of the long stroke variety, the overhead camshaft has decided advantages, as it cuts out a great deal of operating mechanism and eliminates many parts, the adjustment of which is affected by expansion due to the heat of the engine. It also permits of the entire valve mechanism being enclosed in the extensions of the cylinder heads, providing that adequate cooling can be arranged at the same time. Depending upon these considerations also, there is much greater possibility of obtaining silent running. (2) The answer to this question depends very much upon the design and weight distribution. Probably about 50° is an extreme on a perfectly level surface.

Important Dates.

Sat., July 15th—B.M.C.R.C. Members' Meeting at Brooklands.
Sun., July 23rd—Belgian Grand Prix.
Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.
Sat., July 29th, North-Western Centre A.C.U. Open Hill Climb.
Sat., July 29th — Scottish Speed Championships.
Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.
Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.
Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.
Sat., Aug. 12th—B.M.C.R.C. Members' Meeting at Brooklands.
Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.
Sat., Aug. 12th—Motor Cycle Races in Phœnix Park, Dublin.
Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.
Sat., Sept. 16th—The Scott Trial.
Sat., Sept. 23rd—500 Mile Race at Brooklands.
Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

UNEVEN SPARK ON 90° MAGNETO.

I have a 90° twin Eisemann magneto with compound magneto. When in position with plugs direct earthed and driven through the driving chain by turning the starting handle a very fat spark is given on the back, No. 1, cylinder, lead at slow speed, but the fastest turning at full advance will only produce a barely perceptible shock on the front, No. 2, cylinder lead. By removing the advance and retard limit stop screw, a further advance of about 45° will produce a spark on the defective lead, but the spark on the previous good lead fails after about 5° of this further advance. On removing the chain and turning the magneto sprocket slowly by hand with normal advance an equally fat spark is obtained on both leads. Holding the chain against the side of the sprocket has no ill effect, but on slipping it over the points of the teeth and turning through engine, the *one* spark immediately fails. The magneto has been overhauled and put on test, and was declared to be perfect and to give a ⅝ in. spark on both leads. A slight leak was discovered in the condenser and cured and the magneto remagnetised. I have tried a brass taper bush on the magneto sprocket, but this gives no improvement—a fibre bush tried previously was no better. There is no play in the armature shaft which would allow rubbing under chain pull. When running both plugs fire only at relatively high speed, and any slow running is accompanied by irregular firing and silencer explosions.—A.M.W.

The 90° angle does not lend itself very favourably to magneto construction, and in some cases manufacturers have found it impossible to make magnetos suitable for 90° engines unless they eliminate variable ignition arrangements altogether. We should advise you to endeavour to find a position for the contact breaker casing in which reasonably satisfactory sparking is obtained at both plugs, and then endeavour to run the engine without using the ignition control; if this is not possible your only course would appear to be to obtain a more modern magneto. There are two makes at least which are quite efficient in the 90° models.

WEIGHTS OF POWER UNITS.

What are the approximate weights of the following engines? Ordinary 4 h.p. four-stroke; 4 h.p. four-stroke with outside flywheel; 350 c.c. four-stroke; 350 c.c. two-stroke; 250 c.c. four-stroke; and 250 c.c. two-stroke.—T.W.E.B.

It is difficult to give you anything like the exact weights, as various makes show very considerable differences. Roughly speaking, a 4 h.p. four-stroke would weigh 60 to 70lb., the outside flywheel engine being slightly lighter. 350 c.c. engines weigh between 50 to 60lb as a general rule, and a two-stroke should weight 50lb. or slightly under. A 250 c.c. four-stroke would be roughly 40 to 50lb., and a two-stroke, about 40lb

THE DATE QUESTION AGAIN.

Last year I bought an outfit on the assumption that it was a 1918 model. I was obliged to sell the machine, at a much lower figure, last month, owing to bad health, though I have only ridden it twice. The present owner now says it is a 1916 model, and is demanding a return of some of the purchase price. I have also statements from him that he is well satisfied with it. Do you think I ought to refund any money, being previously ignorant of the original date of the machine?—R.R.

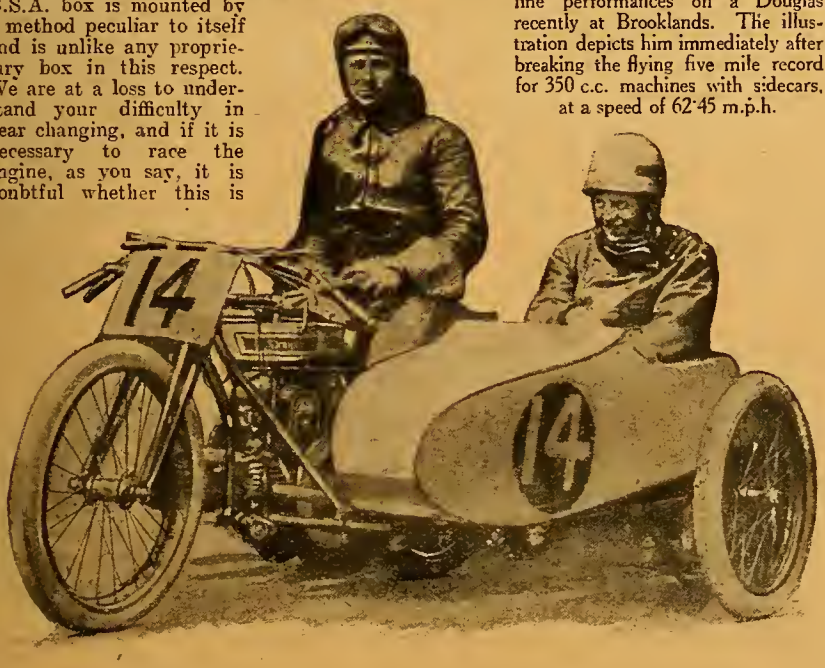
There was apparently misrepresentation, although of an unintentional character. The buyer of the machine would be entitled to a return of some part of the purchase price to compensate him for the difference in value between the 1918 and 1916 models, if the belief that the machine was a 1918 model induced him to give a price higher than he would have paid for the earlier machine. You, in your turn, would be entitled to sue the person from whom you obtained the machine for a like allowance. All things considered, we think it would be best for you to consult a local solicitor if the seller of the machine commences an action against you.

GEAR CHANGING DIFFICULTIES.

My machine, a 1919 6 h.p. twin, built from well-known components, is fitted with a handle bar controlled clutch and kick-starter on the three-speed gear box. I do not like the box at all, for when I wish to change gear I have to race the engine, and I do not like to do this. Would it be an expensive job to have a B.S.A. gear box fitted in place of the one I have now?—N. P.

It would be almost impossible to fit a B.S.A. gear box to your machine without structural alterations to the frame, as the B.S.A. box is mounted by a method peculiar to itself and is unlike any proprietary box in this respect. We are at a loss to understand your difficulty in gear changing, and if it is necessary to race the engine, as you say, it is doubtful whether this is due to the gear box itself. Perhaps the adjustment of the clutch is incorrect, or maybe the carburetter is not set to allow the engine to be throttled down nicely when changing. If all other methods fail, try the experiment of changing up on the exhaust lift. On most motor cycle gear boxes it is not even necessary to declutch when changing down

SCARBOROUGH CARNIVAL. Motor cycles were greatly in evidence at the recent Motor Rally which took place at the Marine Drive, owners coming from towns as far distant as Leeds and Newcastle.



C. G. Pullin, who has made many fine performances on a Douglas recently at Brooklands. The illustration depicts him immediately after breaking the flying five mile record for 350 c.c. machines with sidecars, at a speed of 62·45 m.p.h.

MAKING THE BEST OF IT.

Not being able to get another cylinder from the makers of my old Quadrant machine, I fitted the nearest to it that I could find, that being a Premier cylinder with piston and valves, etc. While the engine was down I had it rebushed. The stroke appeared to be about the same. (1) Will it make any difference if the combustion space is not the same? (Having a fairly good compression I did not think that would matter.) (2) I have an old Bosch magneto; it seems to spark well enough. Do you think it too old? (3) The engine seems to pull well when cold, but very soon gets hot, overheats, and starts to knock on the level. Is there anything you can suggest? (4) I have a Senspray carburetter with No. 32 jet. Is that in order? (5) The machine is geared at 5 to 1, which I think is about correct for a single gear. —S. H. W.

(1) If the stroke is not exactly the same it will make a difference to the compression ratio. As you have fitted a piston to correspond with the cylinder the combustion space should be in order if the connecting-rod length is the same on the Quadrant as on the engine from which the cylinder came. (2) If the magneto gives a good spark there is no need to scrap it simply because it is an old model. (3) Probably the compression ratio is too high, but you do not give sufficient details on which to base an opinion. Try packing up the cylinder with a 1-16in. or even ⅛in. base washer to lower the compression. (4) No. 32 is about correct, but to reduce knocking a larger size (36 or 38) might be more satisfactory. (5) A 5 or 5¼ to 1 gear should be in order.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.

"R. M. B." (Old Windsor).—Stewart speedometers on motor cycles.

"T. S. B." (London).—L.S.D. three-wheeler: m.p.g., reliability, efficiency of two-speed gear.

"R. E. G. S." (Glasgow).—499 c.c. Rudge-Multi and sidecar: suitable make of sidecar and weight.

"F. B." (Oldham).—A.C. Sociable.

"W. E. K." (Manchester).—598 c.c. Beardmore-Precision; Barr and Stroud; 349 c.c. A.J.S.

"H. E. B." (Ashford).—225 c.c. Royal Enfield: speed, consumption, carburation.

"D. I. D." (Heaton).—Lamps run from "cut-out" terminal of E.I.C. magneto on four-stroke "single," value of inductance, size of bulbs, general results.

"W. J. B." (Poplar).—499 c.c. Sports Sunbeam: timing for and maximum speed; carburetter, etc.

"W. A. H." (London).—Morgan runabout: m.p.g. comfort, reliability.

"W. P." (Lostwithiel).—Scott Sociable.

"H. G. H." (Herne Bay).—698 c.c. Raleigh and sidecar.

"R. B." (Boston).—398 c.c. A.B.C.; 349 c.c. A.J.S. "semi-sports" model.

RECOMMENDED ROUTES.

BOURNEMOUTH TO EDINBURGH.—N.A.

Bournemouth, Christchurch, Ringwood, Ibsley, Fordingbridge, Salisbury, Andover, Newbury, East Ilsley, Steventon, Drayton, Abingdon, Oxford, Kidlington, Deddington, (edge of) Adderbury, Banbury, (edge of) Mollington, Ladbroke, Southam, Dunchurch, Rugby, Lutterworth, Leicester, Fosseway, Newark, Tuxford, East Retford, Doncaster, Wentbridge, Ferrybridge, Brotherton, Aberford, Wetherby, Harrogate, Ripley, Ripon, Leeming, Catterick, Scotch Corner, Gretna Bridge, Abbey Bridge, Barnard Castle, Bowes, Brough, Appleby, Temple Sowerby, Penrith, Carlisle, Gretna Green, Ecclefechan, Lockerbie, Beattock, Crawford, Abington, Biggar, Dolphinton, West Linton, Carlops, Edinburgh. Approximately 486½ miles.

LAUNCESTON TO LEVEN.—W.A.

Launceston, Exeter, Cullompton, Wellington, Taunton, Bridgwater, Highbridge, Axbridge, Bristol, Filton, Gloucester, Tewkesbury, Malvern, Worcester, Ombersley, Kidderminster, Bridgnorth, Shifnal, Crackley Bank, Newport, Whitchurch, Tarporley, Warrington, Wigan, Preston, Garstang, Lancaster, Carnforth, Milnthorpe, Kendal, Staveley, Windermere, Ambleside, Rydal, Grasmere, Keswick, Portinscale, Bassenthwaite Water, Bothell, Carlisle, Longtown, Canonbie, Langholm, Teviothead, Hawick, Selkirk, Innerleithen, Peebles, Penicuik, Liberton, Edinburgh, Leven. Approximately 549 miles.

An All-night Ride.

In the recent all-night run from Newcastle to Edinburgh and back, organised by the Newcastle and District M.C., J. E. Reed (293 Wolf) was successful in securing a gold medal.

True, may be—but not Exact.

An illustration appeared in the June 22nd issue of *The Motor Cycle* of two R.A.C. scouts mounted on machines described as "Joys." This, of course, should have read as "Ivys."

Sidecar Speed Trials.

The unlimited sidecar class in the Southport M.C.C. speed trials was won by A. Tinkler riding a 999.5 c.c. American "X" outfit, who put up an excellent performance.

A Featherweight Motor Cycle.

In our issue of June 22nd an account of the "Silver Prince" featherweight motor cycle was given. The manufacturers of this machine are the Tryus Cycle Co., Poplar Works, Johnstone Street, Birchfields, Birmingham.

A Creditable Performance.

In the recent joint speed trials held by the Worcester and Gloucester Clubs at Madresfield Court, the O.K. Junior motor cycle, ridden by W. Handley, obtained first position in no less than fourteen events.

The Real Cause.

In our issue of June 22nd we mentioned that C. Parkinson, whose life was probably saved by wearing a crash helmet supplied by H. Robinson, Ltd., of Cambridge, was thrown from his machine (a 349 c.c. Dot J.A.P.) by the breaking of his handlebars in the T.T. races. What really happened, so we are informed by the makers, was that the rider fell at Governor's Bridge, buckling his back wheel and causing the machine to roll so badly that the steering column of the forks gave way under the strain, and no blame can therefore be attached to the handlebars of the machine.

Chains at Brooklands.

It is a significant fact that the winning machine in each class for the 200 miles sidecar race held at Brooklands on June 17th was fitted with Renold chains. A report appeared in the daily press to the effect that D. H. Davidson (998 Indian sc.) broke a chain after passing the finishing line. The chain was purposely removed at the conclusion of the race, as is quite a common custom where racing machines are not fitted with free engines, in order to make it easier to push. The machines ridden by V. Horsman (596 Norton), G. H. Tucker (588 Norton) and H. le Vack (998 Zenith J.A.P.) were also equipped with Renold chains.

Instruction Booklet.

The revised edition of the booklet on "Instructions for Upkeep and Spare Parts Price List," published by the New Rover Cycle Company, Ltd., of Coventry, is now ready, and copies may be obtained at a nominal charge.

A Two-Stroke to the Rescue.

As R. W. Greaves (976 Brough Superior sc.) was unable to compete in the recent M.C.C. inter-team trials at Tring, his place was filled by H. J. Youngs, who successfully achieved a non-stop run on a 292 c.c. two-stroke O.K. Junior and sidecar.

Of Interest to Clubs.

Such things as cups, badges, and medals are constantly being required by motor cycle clubs, and these requirements are amply catered for by the firm of Thomas Fattorini, Ltd., Trafalgar Works, Hockley Street, Birmingham, whose reputation for excellence of design and workmanship is widely known and appreciated.

London-Edinburgh Echoes.

In the London-Edinburgh run this year, A. C. Maskell (Anzani-engine Morgan) was credited with a silver medal. This has now been altered and a gold medal awarded in its place. J. G. Hann (976 New Imperial) received a silver medal which was not announced in our list of awards, and the name of another competitor in the London-Edinburgh run which was omitted from the report was A. Hannan, who successfully rode a 349 c.c. Coulson, securing a gold medal.

Triumphs Overseas.

In the Liège-Bordeaux-Liège Trial, a distance of 1,242 miles, the Triumph motor cycle secured 1st and 2nd positions, these machines being piloted respectively by Thys and Vaillant. From Italy comes the news that in the third annual Circuito Umbria Marchigiano, which is an event over a most difficult course of 380 miles in the Apennines, the Triumphs succeeded in beating all machines up to 1,000 c.c., winning the first prize, team prize, three cups, and the Manufacturers' Cup. In the Liège-Paris-Liège Trial, over a distance of 456 miles, the Triumph gained first and second positions.

A 3½ SPORTS SUNBEAM

FITTED WITH A

COX "ATMOS" CARBURETTER

EXACTLY AS SUPPLIED, GAINS A MAXIMUM MARK GOLD MEDAL IN THE SCOTTISH SIX DAYS. NO ADJUSTMENT MADE TO THE CARBURETTER THROUGHOUT THE TRIAL, AGAIN SHOWING THE SIMPLICITY OF FITTING AND TUNING A COX "ATMOS" AND ITS PERFECTION AS A HIGHLY EFFICIENT CARBURETTER FOR ALL CLASSES OF TOURING WORK.

May 8th, 1922.

Dear Sirs,

Riding a 3½ h.p. Sports Sunbeam fitted with your Cox "ATMOS" carburetter in the Scottish Six Days, I was awarded a maximum mark Gold Medal.

The carburetter was fitted o machine exactly as received from you, and no adjustments of any kind were made during the whole of the trial.

There was always ample power, coupled with very economical consumption of petrol.

It is a real pleasure to drive with the Cox "ATMOS."

Yours faithfully,
J.R.F.

YOU CAN HAVE A PERFECTLY NEW COX "ATMOS" ON TRIAL FOR 60 DAYS BEFORE FINALLY DECIDING TO PURCHASE.

Write for full particulars, stating make and horse power of engine.

MANUFACTURERS' STOCK

MAKINKOT BRAND

TO BE CLEARED.

Fawn double texture, interlined rubber,

MOTOR SUITS

THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

THE TYRE THAT IS DIFFERENT.

ELITE SUPER NON-SKID

EXTRA HEAVY MOTOR CYCLE COVER

A Real Rubber Non-Skid.

guarantees you at least 33⅓ per cent. more mileage than you have obtained from any other make, no matter what the price.

It embodies all the true principles that go to make a non-skid—Side Ribs, Cross Bars and Suction Cups. Designed to withstand the "kick" of any motor cycle engine yet made and to last out any other make. A combination of everything that is best in tyre manufacture based upon expert knowledge obtained during the past 12 years.

In order to introduce these covers we are prepared to allow a special discount of 25% off the first 1,000 covers sold. This offer cannot be repeated.

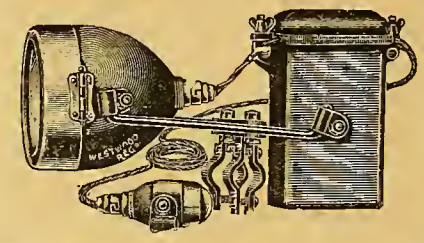
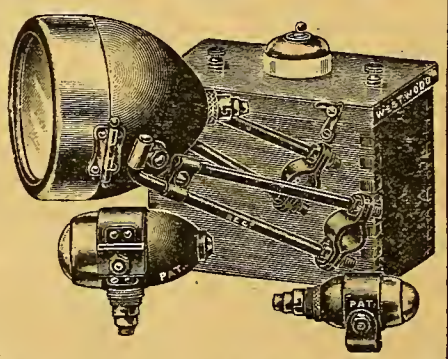
"DAYBEAM" Electric Solo Set



The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate.

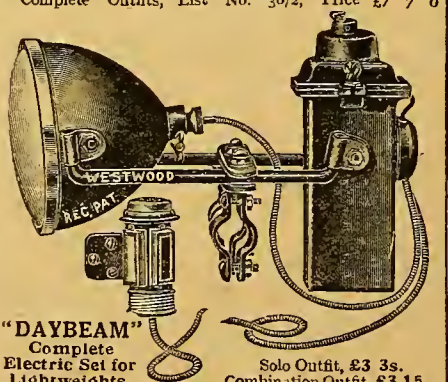
Complete Outfit, List No. 30/1, Price £5 5 0

"DAYBEAM" Combination Set



The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C. Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The Accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting and will give very satisfactory service in use.

Complete Outfits, List No. 30/2, Price £7 7 0



"DAYBEAM" Complete Electric Set for Lightweights.

Solo Outfit, £3 3s.

In the Heart of the Motor Industry

The Midlands Branch

of

The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED,

Head Office: 77, CHEAPSIDE, LONDON, E.C.2

is situated at

Phœnix Chambers Colmore Row BIRMINGHAM

Telephone: Central 1776.

—a convenient centre for the whole of the Midlands District.

Applications for "The Motor Cycle" and "The Autocar" policies are invited from Midlands Agents.

These should be addressed to the Birmingham Branch, the Manager of which will be pleased to give any information that may be desired.

Every assistance is rendered to agents in securing business and the specialised organisation of the Company is placed at their disposal for the settlement of claims or difficulties.

N.B.—"The Motor Cycle" policy is authorised and approved by "The Motor Cycle," with which The Autocar Fire & Accident Insurance Company is closely associated. The conditions of the policy are complete and comprehensive, and the issuing Company enjoys a high reputation for generous and prompt settlement of claims, and for efficient service to policy-holders at all times.

TRIUMPH !!!

WE have purchased two exceedingly large consignments of Triumph Spares, all brand new genuine parts, which we can offer at astonishingly low prices that can never be repeated.

It is impossible to enumerate the many thousand items. These are most comprehensive, and we merely detail a few to exemplify the above statement.

The parts comprise both 1914 and Countershaft, and we feel sure that if all Triumph Riders who at any time require parts and replacements will consult us they will get the very best service that can be obtained. It is our intention to always hold a complete stock of **Triumph** parts, but we are afraid that we shall never be able to repeat the bargains that we now have.

Write to us for quotation for anything from the tiniest Triumph nut to a complete Bicycle.

Shun Park Lawn Tennis Club.
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.
Yours faithfully,
JOHN O. GRIFFITS

23, London Road,
Leicester.

Gentlemen,
I find the Building you sent me very satisfactory, and consider it very good value for the money.
Yours faithfully,
J. CROSAY

"Alma,"
Alexandra Road,
Cowes, I.O.W.

Dear Sirs,
I have received the Building in good condition and I consider it an excellent piece of workmanship and an exceptional bargain.
Yours faithfully,
L. G. CHINCHEN.

The Grand Prix Race.

ONCE more a British machine has won the Grand Prix Race—France's premier motor cycle event—and, what is just as important to those interested in the development of the lightweight, a British two-stroke has carried off the laurels in the 250 c.c. category. Italy must be credited with the honour of winning the first three places in the race for 350 c.c. motor cycles.

There are several features of interest in connection with the two British victors; one also won the Grand Prix last year and this year's Senior Tourist Trophy Race, and the other holds the Lightweight Tourist Trophy. These two riders can rightly claim to be, in their respective classes, Europe's premier racing men, while the makers of their mounts share their success.

No British machines were entered in the 350 c.c., or possibly yet another victory for this country would have been scored, for, good as the Italian machines were, no one will deny that the make which has four times won the Junior Tourist Trophy, in addition to a Senior win, is many miles an hour faster than any two-stroke of the same capacity yet produced.

Every credit must be given, however, to the makers of the 350 c.c. winner, which, in securing the first three places, demonstrated the practicability of a type of engine new to motor cycle practice. It also proved that, given sound and suitable design, good workmanship and reasonable luck, a comparatively unknown machine may leap from local into international fame.

Being practically straight and without gradients, the course provided a test entirely different from that imposed by the sinuous and hilly route traversed by competitors in the Tourist Trophy Races. Such a course called for sheer speed, and few prophets predicted a win for a two-stroke engine in any of the three classes. That, in such an event, the winners of two of the classes were two-strokes in competition with engines embodying the latest four-stroke practice, shows the progress of the type.

Another lesson of the Grand Prix is the fact that a greater proportion of the smaller machines survived the high speed test than those of the 500 c.c. class, which on the whole did not aquit themselves so well as they should have done.

Being held under the auspices of the French Government, the preparations at Strasbourg for the event were unquestionably excellent. But there were several points in the actual organisation of the race which might be criticised, and the English visitors could not help but compare the French methods with the A.C.U.'s very complete organisation of the Tourist Trophy Races. Notwithstanding, the Grand Prix of L'Union Motocycliste de France was a great success, and one looks forward to the 1923 event.

Right-hand Sidecars in Great Britain.

CONSIDERABLE interest has been aroused by a recent article suggesting that sidecars should be fitted to the right- and not to the left-hand side of the machine. Although a most ingeniously argued case was presented in favour of the change, the general weight of opinion appears to favour leaving things as they are, only one correspondent this week agreeing fully with the writer of the original article.

It seems to be a case, too, where the conservative majority are in the right; for the danger accompanying an attempt to overtake another vehicle without first obtaining a clear view of the road ahead is in itself sufficient to outweigh all the advantages of having the sidecar on the so-called off-side of the machine.

An index to the advertisements in this issue will be found on the page facing the back cover.

I Commit a Crime.

CASUISTS and moralists may find food for thought in the causes which may lead up to my doing time at the moment these words appear in print. I was riding a motor cycle in somewhat lightsome mood, and was also on my way to catch a train to fulfil an important engagement at a distance. The road was straight, empty, devoid of turning, and to all appearance deserted. The machine on which I was seated has done as near as no matter 70 m.p.h. on Brooklands, and at the critical moment—shortly to be described—it was absolutely all out. Suddenly a couple of constables jumped out of concealment in the hedge, and held up their arms. I didn't stop, because I couldn't; at that speed a cautious man requires room to pull up. As I slowed down, the sergeant emerged; and about the place at which I came to a standstill, the inspector dived out. I don't feel in the least guilty. Ought I to?

Aggrannoying.

AN awkward word, yet expressive. Suitable for parsons, who mustn't use blunt Saxon expletives. I had exactly five minutes to get to the start of a hill-climb two miles away. I wheeled out the machine, and depressed the float tickler. It stayed depressed, and an immense flooding commenced. Moreover, the tickler was only removable from the underside of the float chamber lid, and the carburetter was fitted with "top feed" of the type which demands two very thin spanners and much caution if the float is to be exposed without destroying the petrol pipe. I got there, but my fuel consumption was at the rate of about 20 m.p.g. This happened because I had laid cunning plans to enjoy a non-stop season.

Compromise.

THANKS to "Entente" for tackling the merits of 3in. *v.* 2⅞in. tyres, but a word of criticism as to his presentation of the facts. I have reluctantly concluded that a sloppily inflated tyre skids more and less controllably than a small hard tyre. If I were competing in a Six Days and expected greasy roads, I would certainly fit 2⅞in. covers, and keep them jolly hard. Similarly in a speed event I would use a hard tyre (size immaterial), as would any other sensible man. "Entente" talks of "rolling" and "bouncing" on 3in. tyres, and condemns them as a "mistake on medium weight machines." Here he goes much too far, as Sir Julian Orde said when Chassagne's Sunbeam did an extra lap in the Car T.T. If a tyre is slack enough to roll, it doesn't bounce, for one thing. Our correspondent has completely ignored the two chief factors, viz. :—

(1) A 3in. tyre doubles the comfort.
(2) A 3in. tyre hardly ever punctures.

So if I were a commercial traveller resident in North Devon (which I praise Allah I am not), I should use board-hard 2⅞in. tyres from September to March, and puddingy 3in. tyres from March to September. This is for solo mounts, of course; on sidecars, the big tyre is at present without a rival.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

A Half Legging.

OF the making of overalls there is no end, and I had almost registered a vow to restrict myself to one or two well-tried friends in this line and to make no more experiments. But I had often felt what the famous Dr. Spooner once described from the pulpit as a "half-warmed fish" for a short leg overall as summer wear. A few weeks ago the Para Rubber Co., of John Bright Street, Birmingham, sent me a pair of their Flexi-Spring leggings, which quite fill the bill. The two legs are separate, ceasing below the fork. Concealed springs of a peculiarly flexible character hold the legging in place and compel it to keep a smart shape, in lieu of flopping unseemly, as many overalls do. The fastenings consist of four spring clips down the back of each leg, plus a minor novelty in the form of a quick release for the instep strap, this snap fastener being high enough up on the foot to keep fairly clean. In conjunction with a three-quarter length coat these leggings are very nice wear. Moreover, they are pretty thoroughly guaranteed, which is a rarity in such matters.

How to Advance the Ignition.

THE local knut—one of those second year experts—was in sad trouble with his new baby two-stroke, which crawled, overheated, and only registered 25 m.p.g. In fact, it displayed the most disquieting symptoms of pernicious anæmia. At last he was simply compelled to consult the local garage in a casual roundabout way, and, of course, the local mechanic promptly suggested that the ignition was timed very late. A week later the knut pocketed his pride, and actually brought the machine in for repairs. The mechanic tested the timing, and found she was firing on the exhaust stroke, so to speak. "Why didn't you advance the timing?" "I did." "How much?" "Two inches." After the mechanic had said several things commencing with "What the . . . ," the knut confessed to supposing you advanced the timing by chopping bits off the high tension cable, on the principle that the spark would then reach the plug sooner.

Occasional Comments.—

Variable Jets.

ON my 499 c.c. Triumph I use a Sutton and Pocklington variable jet. Intelligently used, these devices are invaluable. A few experiments with two or three standard jets of different delivery rates will convince anybody of this. With, say, a 28 jet one will get low fuel consumption, poor acceleration, limited speed and not too good a climb. With, say, a 35 jet the same engine will be excellent in the three latter respects, but consume hogsheads of petrol. Variable jets enable one to get these and other combinations from the saddle. But I would add that the nickel disc on the handlebar control of the jet should be marked with, say, half-a-dozen notches, so that when a useful aperture is found by experiment, the same setting can be regained to a hair at any moment. The use of the lever naturally upsets the action of the air lever, and mixture control becomes so uncertain that some riders hardly ever vary the jet. When the disc is notched, two or three positions will be utilised regularly.

No Switch.

THE tip given by F. E. D. H. on p. 35 in our issue of July 6th for dispensing with any visible switch on electric lamp equipments desires greater prominence, which I hereby accord it. I am fitting it to all my lamps henceforward.

Found in a Public Library.

I DON'T know the inner history of the following gem which was found by a reader on the table of a public reading room. Perhaps some local Boy Scout had been swotting up for his mechanic's badge. The spelling, etc., has not been faked, but is exactly as found.

> "In a fourstroke engine it is consisted by a stroke. In the cilinder its a piston. This piston has four stroke. The first stroke is called a suckssion stroke, because when it goes down it sucks. Is the bettsall and air, which is a 'gass. When the piston up, it pushes up the gass, but its still stopping.
>
> The cilinder because the way with which it comes has been closed. The piston pushes up the gass until it is in but a small space then. The second stroke is called a comppression because it is preesed together. Third stroke is called exorst. And the fourth stroke is a firing stroke. By a firing stroke I mean it is inflamable. By inflamable I mean it will easily take fire."

The office Sherlock Holmes suggests that motorcycling schoolmasters should

(*a*) Use models in explaining engines to small boys.

(*b*) Refrain from dictating while they are suffering from sore throats.

Not the least enjoyable part of a motor-cycling holiday, whether it be in the form of a long tour or a series of excursions from a centre, are the al-fresco meals partaken by the roadside. A picnic scene in North Wales.

THE 1922 GRAND PRIX

OFF! From zero to 60 m.p.h. in a few yards. Riders in the 500 c.c. class a second or so after the flag was dropped. Bennett and de la Hay, the Sunbeam exponents, were too quick for the photographer and had already leaped forward out of the range of the camera.

British Machines first in 500 c.c. and 250 c.c. Classes. A. Bennett (Sunbeam), winner of the Senior T.T. and last year's Grand Prix, secures this year's 500 c.c. Race, with H. Hassall (Norton) second, and Zind (Motosacoche) third. G. S. Davison (Levis) first in 250 c.c. Class. New Italian Two-stroke first, second, and third in 350 c.c. Race.

STRASBOURG was early astir on Wednesday last week, the occasion of the Grand Prix Motor Cycle Race, organised by the Union Motocycliste de France. The whole of the week has been given up to a national fête in Alsace, car races following the motor cycle event on Saturday and Sunday.

Many visitors from all parts flocked towards fair France's regained province, not a few hailing from England, whilst Italians were also in evidence.

The race itself provided still another victory for British productions, A. Bennett (492 Sunbeam) winning the senior event, and Geoffrey S. Davison (248 Levis) the lightweight section, Italy gaining the 350 c.c. event in Visioli, who rode a vertical twin-cylinder two-stroke Garelli—a machine of extraordinarily neat design, which showed up conspicuously throughout.

No 350 c.c. British Machines.

It is a pity that no British machine was represented among the six entries in the 350 c.c. section; one would much have liked to see A.J.S. riders in the contest, and some of the fleet J.A.P. and Blackburne engined mounts of home construction.

It is particularly noteworthy that both Bennett and Davison repeated their Isle of Man successes. In the case of Bennett his victory in the Grand Prix is all the more convincing, as he carried off first place in France last year, won the T.T. this year, and now achieves the grand slam by again winning the Grand Prix. Both Bennett's Sunbeam and G. S. Davison's Levis were fitted with the identical engines used in the Isle of Man, and, moreover, their gear ratios, even after experiment, were unchanged, despite the fact that the roads in the Strasbourg circuit are practically flat.

It was raining slightly as the spectators wended their way to the course, six miles west of Strasbourg, and as the roads were closed to traffic at 7 a.m. a

THE 1922 GRAND PRIX IN A NUTSHELL.

500 c.c. CLASS.

1st.—A. Bennett (492 Sunbeam), 4 hr. 5 m. 40 s. = 61·0 m.p.h.

350 c.c. CLASS.

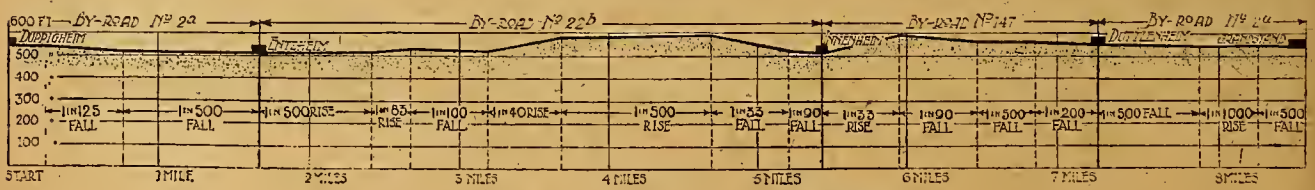
1st.—Visioli (349 Garelli), 3 hr. 39 m. 56 s. = 56·7 m.p.h.

250 c.c. CLASS.

1st.—G. S. Davison (249 Levis), 3 br. 0 m. 84 s. = 52·4 m.p.h.

FASTEST LAP.

H. Hassall (490 Norton), 7 m. 38 s. = 65·7 m.p.h.



Contour of the 1922 Grand Prix Course at Strasbourg.

The 1922 Grand Prix.—

long detour was necessary to reach the grandstands. Those riders who had foolishly abandoned mudguards were obviously fretting about the possibility of ignition and transmission troubles, for the steady rain had thoroughly soaked the road surface.

All round the course railings were used to keep spectators off the roadway; gendarmes and soldiers with fixed bayonets guarded the approaches being stationed at equal distances over the whole course.

French Government's Preparations.

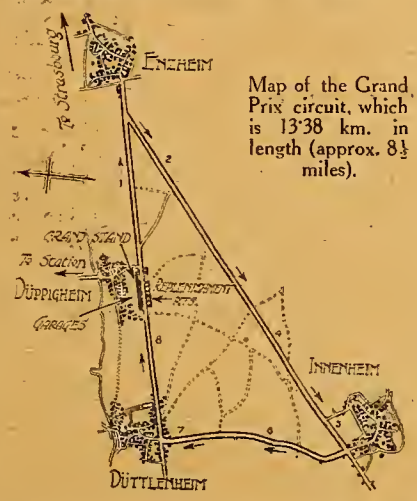
The erection of huge grandstands opposite the replenishment depots, tiers of seats at various vantage points at the three acute bends of the course, and bridges over the roadway, gave some idea of the wonderful preparations made for the races. It is said that a million francs had been spent by the authorities on the organisation of the Grand Prix.

But if the preparatory arrangements were complete, it must be confessed that the actual organisation of the race failed at several points. The score board, for instance, as worked by the U.M.F., was most unreliable, and, in fact, misleading. Again, three or four men were flagged to stop when actually they had not completed their allotted laps, and the times of the leaders were given only every five laps, and then very late. Thus a complete record of the laps traversed had to be made by each spectator who desired to follow the progress of the race at all intelligently.

The usual hubbub of a typical French crowd was not sufficient to drown the din of the healthy exhausts of the forty engines warming up on the starting line. They were ranged up in three groups, 19 in the 500 c.c. class, 6 in the 350 c.c., and 15 in the 250 c.c. class. The start, which was timed for 8 a.m., was delayed a quarter of an hour, for the rain had stopped and there was a chance of the roads drying up.

AT DUTTLENHEIM CORNER. Francisquet, one of the French Norton riders and Liandois (Isoard Liandois).

Promptly at 8.15 a.m. there was a rare din as the starter's blue flag fell and to a man every 500 c.c. rider got smartly off the mark. Two minutes later the six representatives of the 350 c.c. class went away, Gnesa (Garelli), who alone of the half-dozen used his clutch to start, at once forging ahead. Another two minutes and a fine batch of fifteen lightweights roared away in a fashion that was inconceivable of 250 c.c. engines a year or two ago, Cottin (Velocette) outstripping his *confrères*, and Froment (Yvels) remaining in the rear pushing vigorously.



Map of the Grand Prix circuit, which is 13·38 km. in length (approx. 8½ miles).

First Circuit Completed.

Once away there was little time before the 500 c.c. leaders were due, since the triangular course is but 8½ miles in extent, and as a matter of fact part of the longest leg, with the competitors fleeting along the tree-lined roadway, could be seen from the grand stands.

The Strasbourg Circuit is a near approach to Brooklands but for the three acute bends, for the surface is magnificent, and except for slight bends on the short leg of the circuit the course

A few seconds after the simultaneous start of the competitors in the 250 c.c. Class

The 1922 Grand Prix.—

is dead straight. There are no hills whatever, and but for the bends the riders might have used single gears.

Suddenly a group of riders appeared in sight. To the astonishment of most of the British spectators the first man round was Jolly on a twin-cylinder Alcyon, a light blue finished machine; its rider wore a jersey to match. Naas (A.B.C.) was next, within hailing distance, Hassall (Norton) third, with Bennett (Sunbeam), Shaw (Norton), Edmond (Triumph), de la Hay (Sunbeam), Hollowell (Norton), and Walker (Norton) in the order named. But the mud they sprayed! Even after one lap most were bespattered, and a small bow wave was sent up by their front wheels—fearless racing indeed!

Davison takes the Lead.

First to stop at the depots was Pélissier (Motosacoche), but he was off again in three minutes. The Italian, Visioli, led the 350 c.c. class on his Garelli twin, a fine crackle suggesting no fluke about his early advantage. His *confrère* Gnesa was hot on his heels, Meunier (Alcyon) being but 100 yards behind. Of the lightweights, Kershaw led the way, but pulled up as he passed the stands and did not restart, for he had broken a valve at the very point from which he started. Barely 300 yards behind was Davison and his marvellous little T.T. Levis.

Already the men who straggled around the whole of the course passed so frequently that it was not easy to keep track of them. On the second lap, Naas, the French champion motor cyclist and his A.B.C. had managed to wrest the lead from the Alcyon ridden by Jolly which now lay second with Hassall's Norton third. Meanwhile, Francisquet (Norton) toured into his *depôt* for adjustments.

Gnesa (Garelli), too, displaced Visioli for leadership in the 350 c.c. event, though they remained in close order with Meunier (Alcyon) third.

Score Board Errors.

Already the score board was recording laps which were obviously wrong. After three laps Hassall had crept up to second place, but Jolly's Alcyon was but a hundred yards away. In this lap Edmond (o.h.v. Triumph), who, by the way, did not appear so fast as in the Island, fell at the Enzheim bend and lost a minute or two; de la Hay (Sunbeam), who was close on his heels had difficulty in avoiding him. De la Hay, whose engine was noticed to be emitting a metallic ring later retired with a seized exhaust valve. There was a distinct difference in the exhaust notes. The Continental machines, for instance, mostly dispensed with silencers, but for real crackle we award the palm to Gillard's Peugeot, which, incidentally, seemed fast enough to win but suffered stops. The Ricardo-Triumphs had a deep mellow note, while the Sunbeams were more piercing and were only excelled by the Nortons, whose bark is well known. The Velocette in the race had a fearsome note.

When Clech (Motosolo) came round he had tied his handkerchief over his face to protect him from flying mud; he sadly needed goggles.

Hard Fought Duels.

An A.B.C.-Norton-Alcyon fight was proceeding with Triumphs and Sunbeams lying low but a short distance behind the vanguard. With twenty-five laps still to go and the roads in the treacherous state they were, there was nothing definite in the placings. The pace, too, was distinctly hot, laps in less than eight minutes being usual for the fastest 500 c.c. mounts.

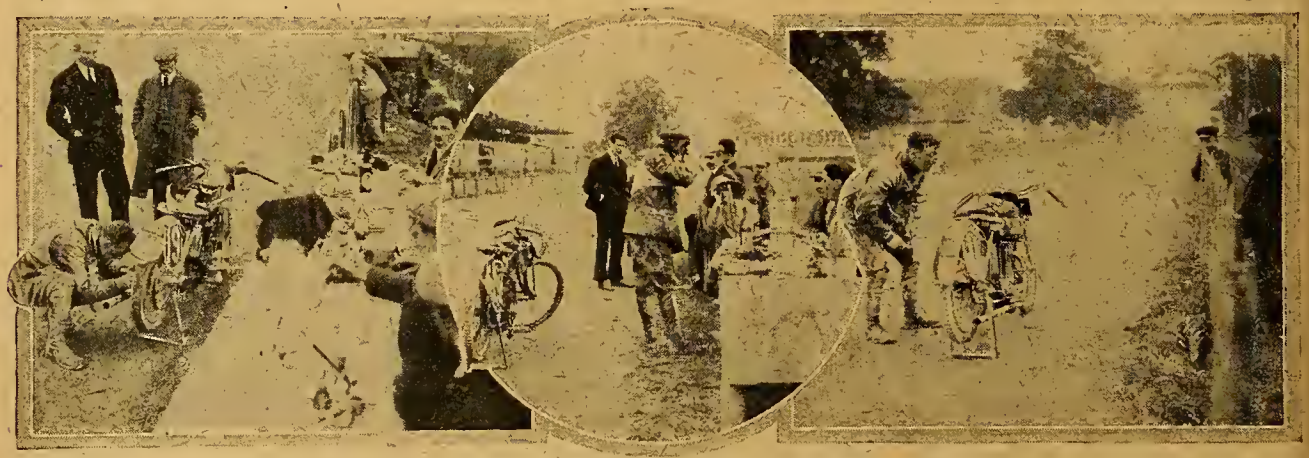
Of the 350 c.c. machines, Gnesa (Garelli) led Meunier (Alcyon), the latter having held first place for two laps, while Visioli (Garelli), the eventual victor, had dropped back to third place.

Among the lightweights, Davison was going well though he had a doughty rival in J. Whalley, whose Massey-Arran was going great guns and threatened leadership throughout the race. Generally, however, the race was not so exciting or absorbingly interesting as the Tourist Trophy. With three sets of riders on such a short course, and the men passing in one long procession, the public was unable to assimilate the position, and the absence of times and the poor lap scoring did not assist.

Hassall as Pacemaker.

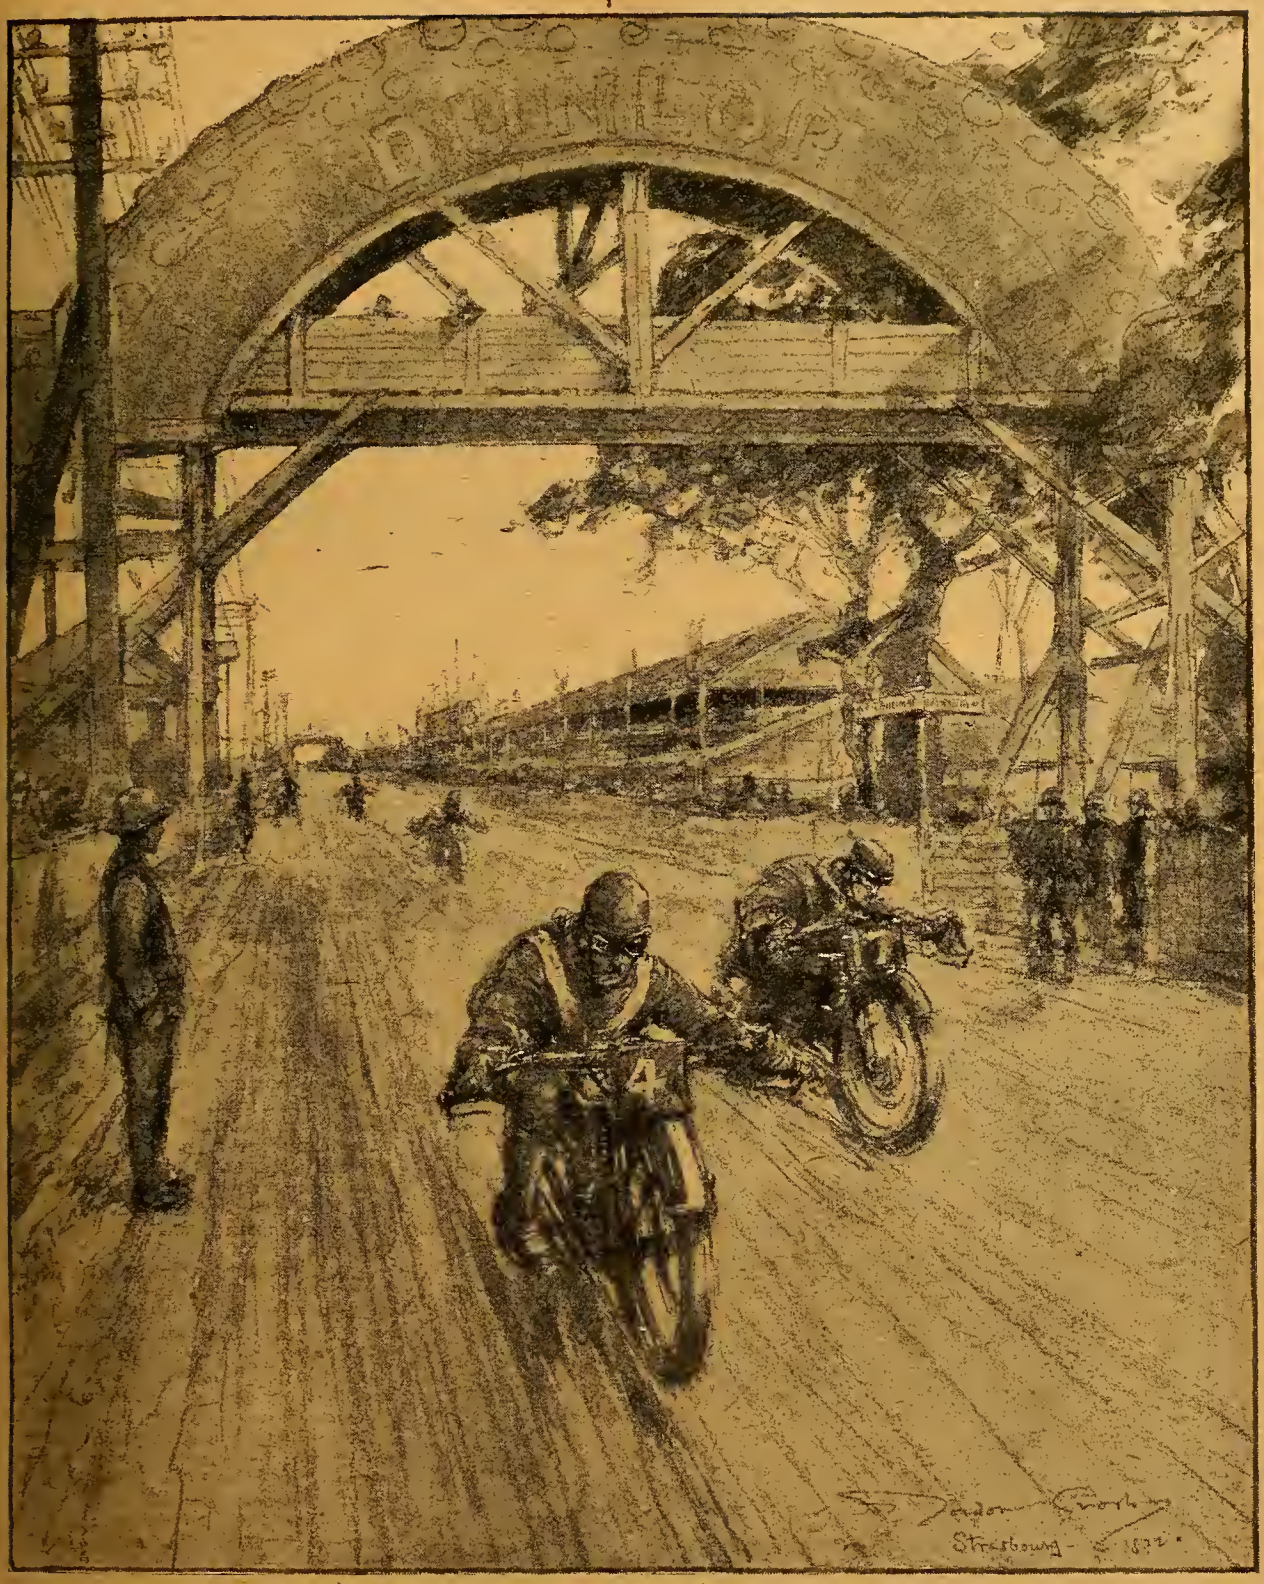
A ding-dong struggle was being fought out in the Senior class, however. Up till the ninth lap the order stood: Naas (A.B.C.), Hassall (Norton) and Jolly (Alcyon), and never more than a hundred yards separated the trio. Jolly actually used Hassall as a pace-maker. Another A.B.C. rider—Bartlett—was going extremely well, and Gillard (Pengeot) at one time promised for a place, but Bennett (Sunbeam), who had apparently been taking matters comfortably at the start, began to creep up place by place, jumping, in fact, from eighth position on the fourth lap to fourth on the ninth circuit. Edmond (Triumph), too, was now doing better.

Gnesa had lost the lead in the 350 c.c. section, Visioli on a sister machine displacing him after eight laps, only to give way to Meunier (Alcyon) for two laps due to a stop for fuel. Many of the riders halted about this period for replenishments. The 500 c.c. leaders were by this time lapping the lightweights, but the pace of the latter was surprising. Davison was still retaining his lead, which he had held from the start. P. Sallot (Thomann) rode extremely well, occupying third place for four laps, but dropped back to make an adjustment. Handley had also dropped back several places on his O.K., and Woods later was seen briskly pushing the sister machine into the depot and proceeding to effect an engine adjustment. But the piston trouble he had supposed turned out to be a broken valve. Marcel Jolly (Armor) was improving, also Cottin (Velocette), who jumped from fourth position on the eighth lap to third on the ninth lap.



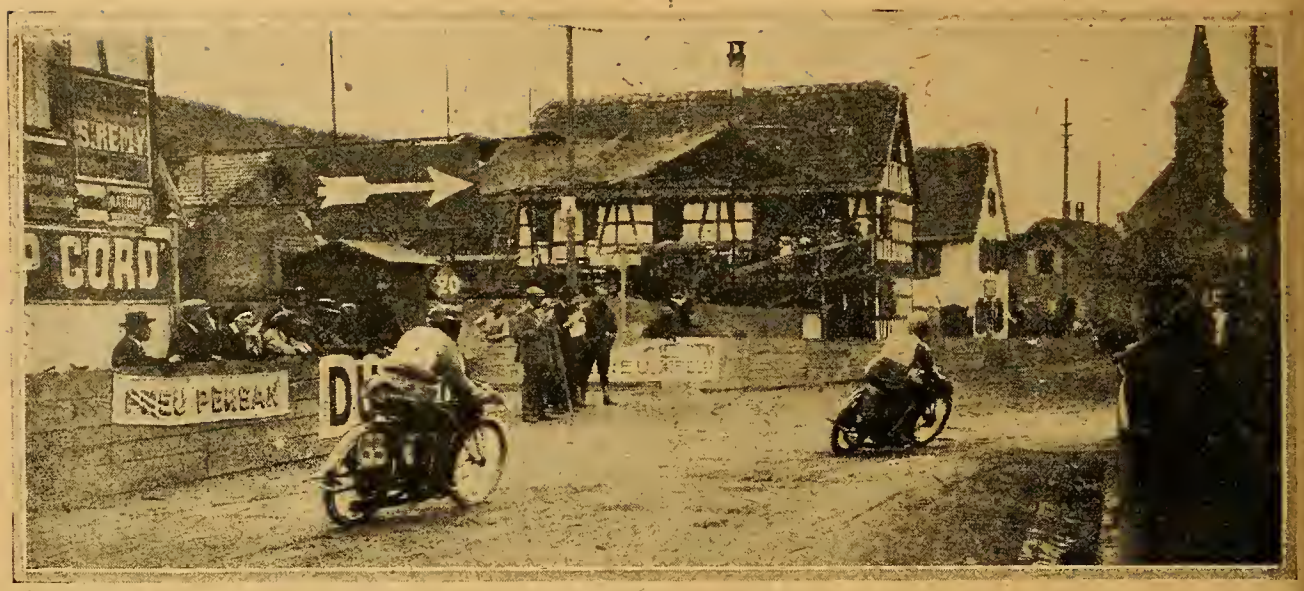
WHEN MEN AND MACHINES GET A RESPITE.

VOLUNTARY AND INVOLUNTARY STOPS. (Left) Hassall (Norton) replacing his rear wheel. (Centre) Vernisse (Yvels) taking in "stamina" fuel. (Right) Edmond (Triumph) searching for lost speed, afterwards discovered to be due to a broken valve spring.



110 MILE DUEL IN THE GRAND PRIX.

A. Bennett (Sunbeam) and Jolly (Alcyon) representing England and France respectively hurtling neck-and-neck past the grand stands during a duel which lasted for thirteen laps.



Gnesa (Garelli) at the heels of a 500 c.c. machine on the third of the three corners of the course. Eventually he ran second in the 350 c.c. class to Visioli on a duplicate machine.

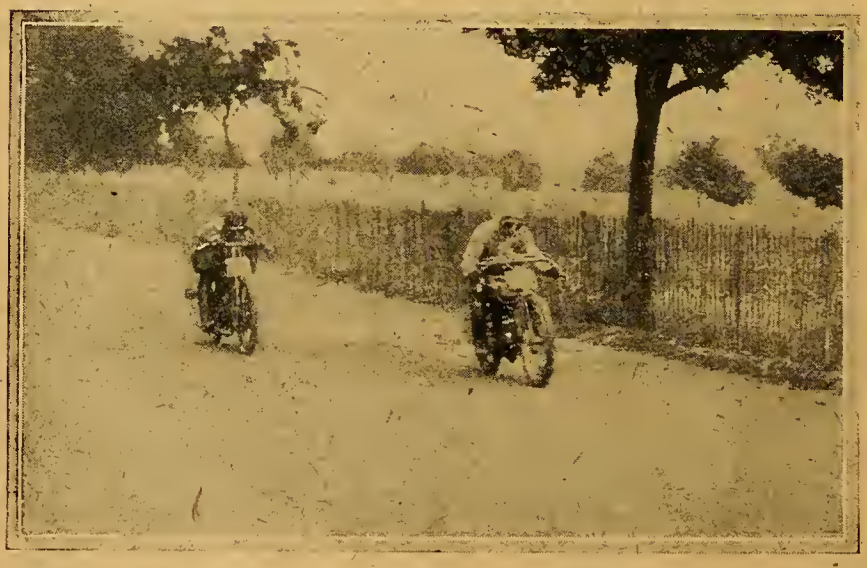
THE LEADERS AFTER 10 LAPS—83 MILES.

		h.	m.	s.
500 c.c. Class.	Naas (A.B.C.) ..	1	18	36
350 c.c. Class.	Meunier (Alcyon) ..	1	29	1
250 c.c. Class.	G. S. Davison (Levis)	1	31	55

The Italian Garelli riders had started in long thin mackintoshes, but the wind and speed had torn the lower portions into shreds, exposing inner tubes around their waists.

One was bound to admire the courageous riding of the leaders, for on roads still having a distinct coating of grease they ploughed along at over a a mile a minute. Hassall, in particular, shot past the stands time after time at a rare pace, but he was not in luck, for he had sundry troubles, and when leading after eleven laps, came into depot with his back wheel wobbling and chain dangling very loose. Finding that the back wheel bearing had given out, Mr. J. L. Norton removed the back wheel from his sidecar machine, and, fitting it to Hassall's mount, the rider was soon off again to regain valuable lost time.

Naas (A.B.C.) again took up the leadership after twelve laps and kept it for three more, but this time it was Bennett (Sunbeam) who was to harass him, though Jolly (Alcyon) having lost position due to a brief stop was still lying third. Another Norton rider, Francisquet, now climbed up the ladder, thanks to several meteoric circuits, and another Alcyon rider, Marc, was consistently annexing higher positions, being fifth after sixteen laps.



Where the course was not boarded off, fencing was used so as to enclose the track entirely. Marc (497 c.c. Alcyon) and Clech (248 c.c Motosolo) on the long leg of the triangle.

LIGHTWEIGHTS RUNNING WELL.

Meanwhile Visioli's Garelli continued to run with remarkable regularity, and was never challenged for leadership among the six 350 c.c. machines, and the same may be said of Davison's Levis, which had only Whalley (Massey-Arran) and Cottin (Velocette) to fear; for, in the order named, those three maintained their positions for lap after lap, Cottin dropping back when, in his sixteenth circuit, he had to refill. Davison had a huge tank with the object of stopping once only for replenishments.

At thirteen laps Bennett was only a couple of miles in arrear of Naas (A.B.C.) and now occupied second place, Jolly and Hassall being next, but the Sunbeam rider seemed to be crouching lower, and we have learned to know what that means; gradually but surely he wore his opponent down, until, during the fifteenth lap, Naas unfortunately suffered a broken piston and retired, and Bennett secured the lead.

THE PENALTY OF NOT WEARING GOGGLES.

Clech (Motosolo) was now almost blinded by the mud due to wearing no goggles; so his plight can best be imagined. That Handley's O.K. was possessed of real speed was seen when he flashed past Jolly (Alcyon) in front of the grandstands.

Edmond in the meantime had stopped for petrol, but he was now over a lap in arrears. De Neufville (Triumph) also halted, and had some difficulty in getting his engine to fire on restarting. Gillard (Peugeot), arriving late, made a quick refill, as did Hassall (Norton). Chauvière, on a 250 c.c. mount of his own make, retired with a broken aluminium piston, the second only of the 250 c.c. mounts to retire to this point, though several of the Senior machines were out of the running.

The 1922 Grand Prix.—

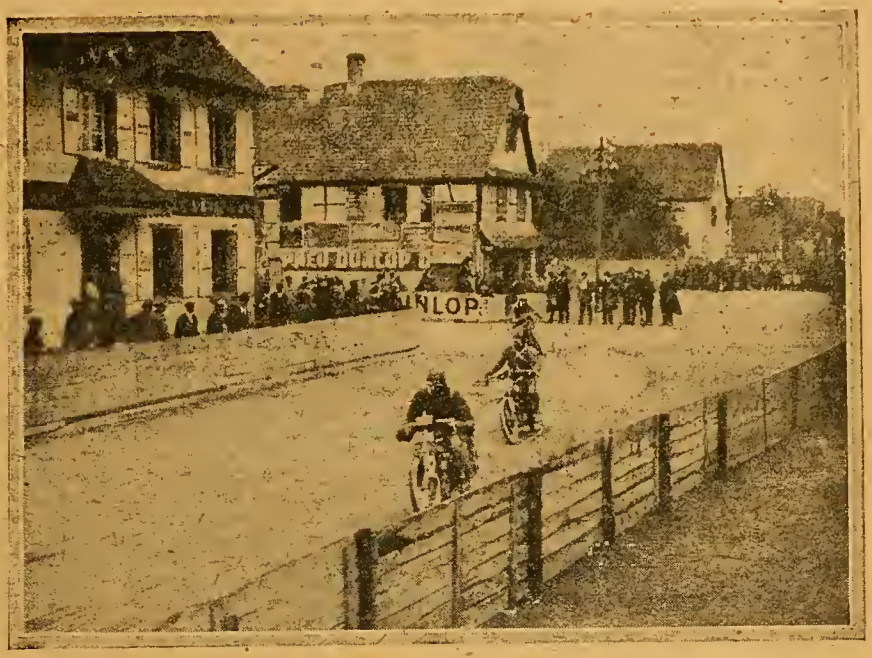
All the 350 c.c. riders were running well at half distance. Bartlett's A.B.C. was misfiring, due to mud and wet on the magneto. Cottin (Velocette) now arrived and, having apparently decided to pass on, changed his mind and caused some consternation by riding the full length of the stands in the reverse direction of the course unhindered. Marc (Alcyon) got another lift up due to retirements, and Hassall was making a really plucky attempt to retrieve lost ground.

At Half Distance.

About half distance the roads began to dry up, the sky brightened, and there was every prospect of a really good finish; the crowds too—affected earlier on by the adverse weather—considerably increased in proportions. The wonderful Alcyon ridden by Jolly was still hotly pursuing the leader, and its chance came when Bennett, already delayed by a fall at Duttlenheim corner, due to his rear brake seizing, stopped for petrol and oil. The Frenchman thus led from the 16th to the 18th lap by a maximum of 27 seconds, only to be repassed by the Sunbeam wizard on the nineteenth circuit.

From this point onwards Bennett rode like a winner, never varying his lap speeds, and nobody remained who could live with him but Hubert Hassall, who experienced unexpected mishaps.

Zind (Motosacoche) had now worked up well, but this Swiss rider, though eighth on the 14th lap, occupied third place from the 19th to the 21st laps, when he was displaced by Hassall (Norton), whose fight against odds was the feature of the day. Twice he lost his position on account of minor mishaps, but pluckily regained it, establishing the record lap: 7m. 38s. (over 65 m.p.h.), later beating it by a few seconds.



Representatives of each class at Duttlenheim Corner. Cuzean (347 c.c. Terrot); Zind (499 c.c. Motosacoche); and Belney (249 c.c. Terrot).

When Edmond arrived in depot he eyed his machine disconsolately, and discovered the cause of his lack of speed—a broken inlet valve spring, which caused his retirement. Pinney (Triumph) arrived slowly about the same time and retired, due to a lost tappet rod, having paddled 10 km. to the finish. Pelissier (Motosacoche) was very fast; he easily slipped ahead of Jolly (Alcyon) in one of the many duels in front of the grand stand. On the next lap a trio at speed was a sight worth seeing, particularly as it was made up of International stars—Jolly (Alcyon), Zind (Motosacoche), and Bennett (Sunbeam).

Vernissi (Yvels) now stopped to change a tyre.

AFTER 15 LAPS—125 MILES.

		h.	m.	s.
500 c.c. Class.	A. Bennett (Sunbeam)	1	59	33
350 c.c. Class.	Visioli (Garelli) ..	2	11	49
250 c.c. Class.	G. S. Davison (Levis)	2	19	31

Bartlett withdrew his A.B.C. due to a fall at Duttlenheim, caused by a broken

England's premier lightweight speedman—G. S. Davison (Levis)—finishing first in the 250 c.c. class.

The 1922 Grand Prix.—

brake cable. He was not hurt, the spill merely adding to the layer of mud plastered on his clothes. De Nenfville now added to the Triumph's cup of disappointment by having to withdraw, due to loss of compression. Zind, the Swiss rider ot a Motosacoche, ran with his machine in the reverse direction of the course, and was reprimanded, but he merely wanted to daub the chains with a paint brush dipped in oil.

Spectators hereabouts conjectured whether Bennett and Jolly would have to stop again for replenishments, since there were but seconds between them. When they came by the grandstand Bennett actually had a 25 seconds' lead, but the Frenchman stopped for fuel.

A Wonderful Lightweight.

The little Levis was an eye-opener to the crowd. With only a lap or two to go another success for the two-stroke seemed a certainty. Actually Davison suffered his only stop during the closing stages, a plug giving out. He had been hampered, however, by a lack of petrol in the float chamber, and had continually to depress the needle to ensure a sufficiency.

Meanwhile Whalley was pegging away on his Massey-Arran, as regularly second as Davison was first—and Davison knew it! When the latter halted on the nineteenth and penultimate lap, he feared that Whalley might beat him on the post, but as luck had it Whalley, too, had trouble, as his gudgeon pin broke, and he had to finish on foot, losing three places thereby in the last few miles.

G. S. Davison received a hearty cheer as he arrived, but stopped short of the official flag (borne by the Chevallier René de Knyff) and had to be waved on again, with the result that he started again on a superfluous lap.

Once again the Levis has raised the standard of two-stroke machines by this second successive victory, and has made an achievement of considerable significance.

P. Sallot, on a Thomann, gained second place at the finish, having ridden well and consistently. Cottin (Velocette) was third man home, a position he occupied for a long time.

FINAL TIMES IN THE 250 c.c. CLASS.

	h.	m.	s.
1. G. S. Davison (Levis)	3	0	8.4
2. Sallot (Thomann)	3	34	3
3. Cottin (Velocette)	3	34	41
4. J. Whalley (Massey-Arran) ..	3	41	7
5. Clech (Motosolo)	4	11	3
6. M. Jolly (Armour)	4	18	7
7. Belney (Terrot)	4	28	5
8. Nell (Velocette)	4	30	42
9. Vernisse (Yvels)	4	38	51

Interest now centred upon the 350 c.c. class, since the closing stages of the 25 laps had been entered upon. At the conclusion of 20 circuits the Garelli riders were still first and second—the sole example of consistent positions in the whole race, Mennier (Alcyon) still being third.

TIME AFTER 20 LAPS—166½ MILES.

	h.	m.	s.
350 c.c. Visioli (Garelli)..	2	56	12
500 c.c. A. Bennett Sunbeam).. ..	2	40	11

Gillard (Peugeot) now retired after sundry meteoric laps punctuated by various minor troubles. Bennett, as regularly as ever, continued to increase his advantage, with the Alcyon rider hanging on until the 25th lap, when the latter had to retire. It was noticed when he passed for the last time that his machine was wobbling as if the steering had been affected.

This let up Hassall into second place, though still two laps behind Bennett, and he never lost it, though once he had difficulty in passing Vernisse (Yvels), who was on his wrong side, and Hassall had to apply his brake. Zind (Motosacoche) likewise moved up one when Jolly went out, and he, too, stuck to the third position.

A Triple Win for Italy.

Still the 350 c.c. mounts ran with clocklike precision, though there were but a dozen riders left on the course when Bennett stopped to fill up. While Davison was being fêted, the French agent for Levis, M. Psalty, advertised the Levis success on the windscreen and disc wheels of his car, with which he proceeded to parade the good news.

The only changes in the positions of 350 c.c. class were that dall' Olio displaced Meunier (Alcyon) on the 23rd lap, and thus enabled the Garelli two-strokes to finish first, second, and third, after a fine exhibition of consistent running. Visioli (Garelli) acknowledged the cheers by waving both arms in the air as he sped along. Thus two races finished before noon.

350 c.c. RACE, 208 MILES—RESULTS.

	h.	m.	s.
1. Visioli (Garelli)	3	39	56
2. Gnesa (Garelli)	3	41	1
3. dall' Olio (Garelli)	4	6	46
4. Meunier (Alcyon)	4	30	48
5. Cuzeau (Terrot)	4	36	1

When Jolly retired, Marc, on another 500 c.c. Alcyon, took up the running, but from fourth place his task was too great. On the other hand, due to an error on the scoreboard, many thought he was pressing the leader as he came round regularly half-a-mile or so in arrear.

It began to drizzle again, but the road surface had dried well. On commencing his last lap Bennett received an encouraging cheer, and one saw him in the distance flashing along the magnificent highway bordered by tall trees. His Sunbeam never faltered, and he came home at a wonderful pace, being cheered vociferously for his third successive victory. On the principle of doing in Rome as the Roman does, competitors who had retired rushed forward and kissed Bennett, and soon he was the centre of an admiring crowd, which grew to positively dangerous proportions on the course itself.

Marc now came along, and, being flagged, stopped under the supposition that he had finished the course. Later the officials discovered the error, and urged him to complete two more laps, but having lost much time Marc declined, and indeed demanded to be credited with second place. It was extremely unfortunate, as Marc had ridden a fine race and fully deserved better luck.

Hassall (Norton) now came along, and, hesitating as he peeped into the tank, decided he had enough petrol to proceed on his final lap. He came home second after an adventurous and plucky ride full of thrills, approximately 15min. behind Bennett. Third to finish was Zind (Motosacoche), a marvellous performance when it is considered that he was no higher than sixteenth on the first and second laps, and from that moment gradually ascended the ladder. Only one other rider survived the course in the 500 c.c. class, *viz.*, Francisquet, another Norton rider, who also was low down (fifteenth) after two laps, but climbed rapidly, being fourth at half distance.

Few 500 c.c. Survivors.

The small percentage of survivors in the Senior section is certainly surprising, the more so when compared with the smaller classes. Tyre trouble was noticeably absent throughout the day. Most brought home the new tubes with which they started. Engine trouble was the most pronounced—which is perhaps not surprising when the flat triangular course of 8½ miles, with its long, straight stretches, is taken into account.

500 c.c. RACE, 250 MILES—RESULTS.

	h.	m.	s.
1. A. Bennett (Sunbeam)	4	5	40
2. H. Hassall (Norton)	4	20	8
3. Zind (Motosacoche)	4	33	33
4. Francisquet (Norton)	4	42	48

The French Grand Prix has thus again added to the laurels of British manufacturers. In both the 250 c.c. and the 500 c.c. classes British riders and machines were first

Thus in the big international race organised by the governing body of the sport in France, no French machine secured a victory. In the 250 c.c. class representatives of cross-Channel makers were second, fifth, sixth, seventh, and ninth, while a French rider of a British machine was third.

Italy claimed the first three places in the 350 c.c. race, with French machines fourth and fifth; no British machines were entered.

In the 500 c.c. class, as already recorded, only four out of the nineteen starters finished the course, and of these none represented the organising country, Britain taking first, second, and fourth places, with Switzerland third.

DETAILS OF THE WINNING MACHINES.

250 c.c. Class. G. S. Davison (Levis).

British single-cylinder two-stroke; Dunlop tyres; E.I.C. magneto; Senspray carburetter; Renold chains. Weight of machine, 156 lb.; rider, 132 lb.

350 c.c. Class. Visioli (Garelli).

Italian twin-cylinder two-stroke with common combustion space; Hutchinson tyres; Mea-Garelli magneto; Zenith carburetter. Weight of machine, 195 lb.; rider, 149 lb.

500 c.c. Class. A. Bennett (Sunbeam).

British single-cylinder four-stroke; Dunlop tyres; M.L. magneto; Amac carburetter; Renold chains. Weight of machine, 251 lb.; rider, 136 lb.

WHAT THE WINNERS SAID.

Davison thought the Course Monotonous.

WHEN Davison's win seemed a certainty the French representative of the Levis became violently excited, but when Whalley was seen to be pressing him hard his face fell. Then poor Whalley broke down, and Psalty, the agent referred to, once more became exuberantly joyful.

Geoffrey S. Davison took his fine win most modestly, and reported he had had by no means a trouble free run. Uneven firing, due to bad carburation, caused him considerable anxiety, and this he ascribed to a different brand of petrol from that he had used in practice; but it was the only kind he could procure just before the start. Also, although he was laps ahead of his rivals towards the end, he had to stop once, in the 19th circuit, to change a plug. Mud and grit caused considerable discomfort, and that thrown forward by the rear wheel blew back again and hit him in the face.

G. S. Davison and his wonderful Levis at the conclusion of his splendid ride of 166½ miles in 3 hrs. 0 min. 8·4 sec.

Asked about the course, he considered its long straight stretches monotonous, the only relief being the slightly winding stretch between Innesheim and Duttlenheim—the shortest of the three legs of the triangle.

The Levis he rode was the identical mount he used in the Isle of Man, and had the same gear ratios, *i.e.*, 4.2, 5.125, and 6.75 to 1.

He considered the corners too sharp to enable a close ratio-box to be used with success; but, for experimental purposes in France he was well provided with gear boxes giving various ratios. Finally he selected that used in the Isle of Man. His tank held sufficient petrol and oil to enable him to survive the 20 laps (166½ miles) with but one stop.

Following upon his recent success in the T.T., Davison and the makers of his Levis are to be heartily congratulated upon their signal victory. Davison's mount was equipped with Dunlop tyres, which hardly showed a mark at the end of the race, E.I.C. magneto, Senspray carburetter, and Renold chains; Miracle oil was used.

Visioli Interviewed with Difficulty.

A CHAT with Visioli, a typical Italian, short and clean shaven, the gallant rider of the Garelli, was no easy matter, as he spoke no French, and his interviewer little Italian. He, too, had trouble on the run, and had stopped four times owing to plug defects. Asked as to his views of the course, Visioli said that he considered it to be very stiff for small machines, which had to be driven hard all the time. It was quite different from Italian races, which were often held in hilly or undulating country. Signor Garelli, who witnessed the race, is naturally pleased with the triple success of his machine—a two-stroke vertical twin with a common combustion chamber. Third to finish, dall' Olio, is a private owner.

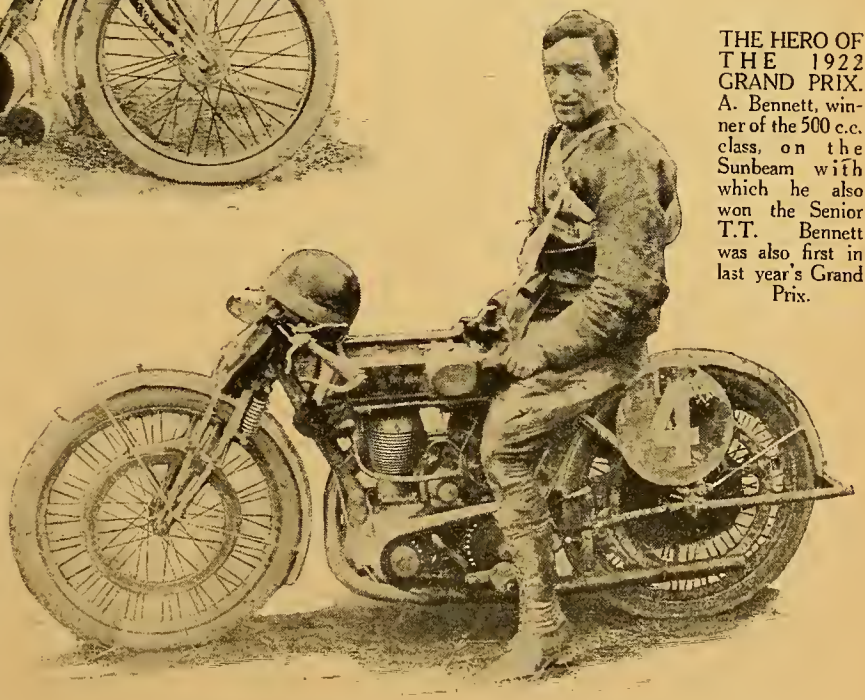
All the Garellis were fitted with Mea Garelli magnetos, a special Zenith carburetter with two vaporising chambers and one float chamber, and Hutchinson tyres.

How they Greeted Bennett.

BY winning the French Grand Prix last week Alec Bennett has performed the "hat trick."

When a Frenchman wins his compatriots embrace him. Taking a leaf out of their book, de la Hay and a host of other Englishmen soundly kissed Bennett on his arrival. Probably our French friends now think that we have changed since the war, and have become more demonstrative.

Save for a slight accident on the ninth lap Bennett had no trouble. At Duttlenheim corner a Frenchman on a small two-stroke cut across his bows and so Bennett had to lock his back wheel. This saved a collision, but the eventual winner skidded, fell, hurt his arm, and slightly cut his face. In answer to a question, Bennett laughingly replied that he had had no oil trouble this time, and had stopped to replenish every eight laps. He considered the course, though easy, very trying to an engine, as it got little or no relief. Notwithstanding the noticeable dissimilarity in the Isle of Man and French Grand Prix courses, Bennett found his T.T. gears just right for the Strasbourg circuit, and, in fact, used the identical machine, engine, and gear box, with ratios of 4.1, 5.3, and 7.8 to 1. He finished fresh, and was just as retiring over his victory as is his wont. When a man can win three important contests in succession, as Bennett has done, he must be acknowledged to be possessed of wonderful judgment and restraint, quite apart from the known qualities of the magnificent Sunbeam he rides. Bennett's machine was fitted with an M.L. magneto, Amac carburetter, Dunlop tyres and Renold chains.



THE HERO OF THE 1922 GRAND PRIX. A. Bennett, winner of the 500 c.c. class, on the Sunbeam with which he also won the Senior T.T. Bennett was also first in last year's Grand Prix.

NOTES.

Francisquet's Norton was fitted with a grease cup feeding lubricant to the inlet valve guide.

* * *

Four-valved twin-cylinder engines were the feature of the racing Peugeots. The overhead mechanism was entirely enclosed in ribbed aluminium casings.

* * *

A number plate was used to indicate to the waiting competitors the number of minutes before "zero hour," which was 15 minutes after schedule. Quite a good idea, as the noise of the exhausts silenced all other sounds.

* * *

W. F. Newsome, the old Triumph racing man, rode from Strasbourg on the step of a lorry which was conveying spares to the depot. Suddenly a steering pin fell out; the driver lost control, of course, hit a cart and turned it over. Fortunately no one was hurt.

* * *

J. L. Norton found that his garage had been broken into overnight and Hassall's machine had had several nuts loosened. The matter was brought to the notice of the French officials, who regarded it in a very serious light and promised full investigation. One more case of this kind will kill international competition as surely as it was killed in 1905.

* * *

M. Jolly (Armor) stopped to replenish on his 7th lap, keeping his engine running all the time, but stopped it immediately he engaged his clutch.

* * *

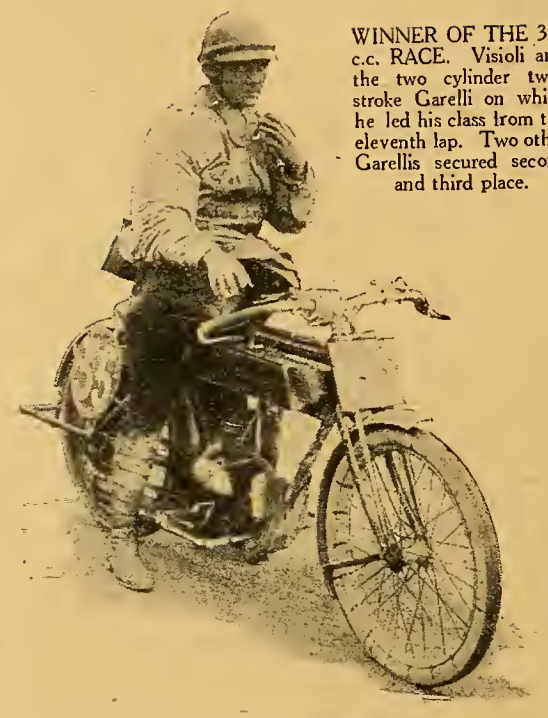
Cottin (Velocette) overshot his depot and *rode* back to it, thereby arousing ire among the officials.

* * *

Duttlenheim Corner was taken steadily by most of the competitors, but Naas, the daring A.B.C. rider, actually passed a rider on the bend and just escaped touching him.

* * *

In the Armor-Thomann-Alcyon depot petrol poured from its tin into a spouted can was filtered through someone's hat.



WINNER OF THE 350 c.c. RACE. Visioli and the two cylinder two-stroke Garelli on which he led his class from the eleventh lap. Two other Garellis secured second and third place.

Group starts are always impressive, but the manner in which the two Sunbeam riders, Bennett and de la Hay, disengaged themselves from the throng was well worthy of note.

* * *

Two of the three Garelli's made excellent starts and kept up a fine average throughout. This is the first time this ingenious two-stroke has been raced before a representative group of British motor cycle enthusiasts, but it is not unknown to Italian speed events.

* * *

We pay grateful tribute to the kindness and courtesy extended by MM. Reni de Knyff, Longuemare, Tatin, and Fourreau who always gave valuable assistance when requested.

The lightest machine in the 500 c.c. race was Marc's Twin Alcyon, which weighed 195lb. Thus the rider's weight of 147lb. was 43 per cent. of the total of rider and machine.

* * *

The heaviest motor cycle in the 500 c.c. class was Walker's Norton, which weighed 279lb., the rider being 179lb., 39 per cent. of the combined weights.

* * *

Lightest among the lightweights was the privately constructed Chauviere, which weighed but 149lb. This machine had a four-valve four-stroke engine built into a Villiers frame.

* * *

Again the side valve single has won a big international event in competition with the o.h.v. type, which was in the majority.

* * *

Below we give a table showing the equipment of the machines in the three races. It will be seen that British components played quite an important part.

TYRES.

	Dunlop.	Hutchinson.	Avon.

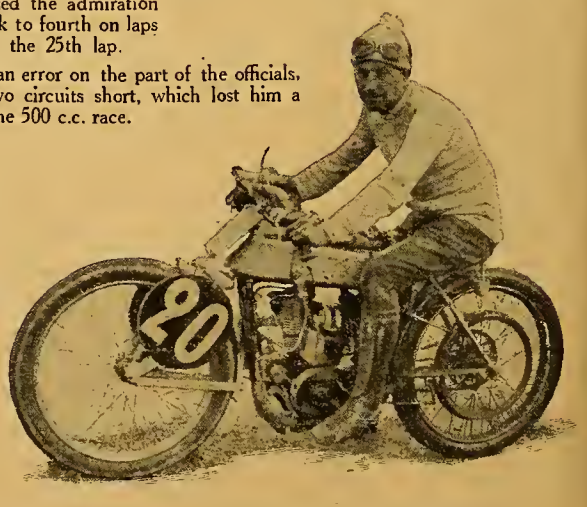
H. Hassall (o.h.v. Norton), whose riding aroused the admiration of every spectator. He led on lap 11, fell back to fourth on laps 13 and 14, and regained second position at the 25th lap.



Marc (Alcyon), who, through an error on the part of the officials, was flagged off the course two circuits short, which lost him a place in the 500 c.c. race.

AT STRASBOURG.

Impressions of the Alsatian Capital during Grand Prix Week.

AT least half the enjoyment of a French motor-cycle race lies in the general atmosphere which prevails. At Strasbourg, indeed, it was the more marked because the weather was vile on the actual day of the race, for, even with this to damp everybody's spirits, still the spectators treated the whole thing as a spectacle for their amusement.

Before the race anybody with a motor cycle, more particularly anyone in a peculiar garb or with an engine possessing an unusually strident bark, was the centre of almost embarrassing attention, and, knowing this, handled his machine with as many little spectacular touches as possible.

Interested Critics.

If any motor cycle stopped, while its rider so much as lit a cigarette, an enormous crowd formed a thick hedge all round it to comment on the engine or rider impartially in a *patois* which owed something to Germany and little to France. Even when the inevitable white-trousered *Agent de Police* arrived, inquisitive as to the obstruction, the crowd did not dissolve, but had to be pushed aside until the Majesty of the Law confronted the motor cyclist. Even then the Law was stymied, because, in nine cases out of ten, the motor cyclist, being English, could not understand a word—or for convenience claimed this disability.

To go to a café of an evening, especially in any sort of leather coat, was to be a hero very easily. Can it be wondered that everyone rode the streets in sharp bursts, let their engines "rev." suddenly until the old buildings rang with the noise, and allowed their machines to skid just sufficiently to demonstrate a masterly recovery. In any case a motor cycle of the racing brand can make more noise than a sporting car, and, since noise is appreciated in France, the motor cycles scored heavily over the many ferocious canvas-bodied cars which were in Strasbourg for the car races.

Seriously, though, the atmosphere of a French town before a race is something worth experiencing after the apathy of the average English crowd. When the Frenchman—or in this case the Alsatian—sets out to make merry, he makes very merry and is not afraid to show it.

On the day of the race all who wanted to see the motor cycles turned out in big cars with bodies tied on with string, and, rain or no rain, amused themselves. And this is true not only of the men, but of their womenfolk, who, moreover, are experts at wearing a really suitable and really practical motoring garb and yet appearing attractive in it.

It is not done in England.

In England, to stroll about munching the end of a long roll and with a large bottle of cider under one arm, would invite undue attention. If, added to this, one is wearing a purple waterproof, a blue collar having a pattern of crimson flowers and a yellow necktie with vermilion spots on it, then a crowd—probably a hostile crowd—would collect. In France nobody pays any attention, and everyone is happy.

Enthusiasm of the Crowd.

At the *Tribunes* the attitude of the crowd is characteristic. Man, woman and child, they watch each machine which stops at the pits and argue hotly as to why, going into technical details to any length. All classes do this. Now imagine a charwoman in England who could talk seriously about an o.h.v. Triumph, and you have the parallel case. There are, of course, rules and regulations, policemen and barriers, posses and brassards. Yet, towards the middle of the race, quite a lot of people have got where they shouldn't be, and done what they "didn't ought," *and nobody minds.* You would not see the T.T. winner kissed by a quite strange girl immediately he finished; perhaps it would increase the entry if you did; but it has happened in France, and nobody can see why she shouldn't. Every tram, nearly every house, and practically every car has a flag, two flags, four flags, or more, the cars often having as many as their owners can borrow or steal. This adds colour to the scene, brightens everybody up amazingly, and convinces one that this really is a *fête*, not a funeral. So great is this effect that even staid Britons have been known to wear a tricolour in their hats. Taking it all round, the French know how to stage a race and, which is more important, the crowd know how to act their parts with zest.

S. C. H. D.

INTER-CLUB RIVALRY.

Bristol *v.* Bath Team Trial. Victory for Bristol.

AN annual West country event, the Bristol and Bath inter-club team trial, was contested, in a howling gale, on the 7th of July.

It proved to be one of the most strenuous trials in the history of either club. It will be remembered that in the "Arctic" Trial of April 1st last, the afternoon's course in the Mendip Hills was cancelled, and this was, in fact, the principal portion of the route of the Bath and Bristol event, which has been favoured for some years past. In the 40 miles lap, taken twice, are five observed hills notorious for bad surfaces, and the effect of recent weather on these and the other twenty miles of "colonial" sections was to render them atrocious. Ashton Hill was the easiest. Lye Hill is a freak, but comparatively simple gradient. East Dundry, Ubley and Burledge are also freak climbs named in the order of their severity, Burledge being the most difficult; it produces wheel spin without apparent reason, and the upper sections are boulder strewn to such an extent that keeping a balance is more a matter of luck than skill. Ubley is a dark, steep track on the sloping sides of thick wood, and heavy rain had rendered this very uncompromising.

The whole Bristol team got home with very nearly perfect scores; only one hill failure among ten machines on ten freak hills is rather remarkable riding. Bath was unlucky enough to have one solo man retire, within a few miles of the start, and there were numerous failures on the hills; also a number of time errors at checks.

Full Points Gained.

Of the Bristol team, in the solo section, the best performance appeared to be that of S. G. McWatters on a 490 c.c Norton (incidentally the machine which G. H. Tucker rode through the "Arctic" Trial). He gained bonus points on all the "bonus" hills and thus scored a "highest possible." Only those who rode through the trial can fully appreciate the merit of such a performance. W. A. Le Brun (499 Rudge), E. F. Jellyman (490 Norton), V. Courteney (499 Sunbeam), F. A. Simpson (346 Francis-Barnett), and K. J. Woods (499 Wilkin), all finished without any failures, but with only two or three of the possible four bonus points awarded for feet not leaving the rests on Burledge and East Dundry.

The sidecars were equally successful. H. F. Walters (994 Ariel sc.) and G. H. Tucker (490 Norton sc., the mount on which he rode in the "200 mile" at Brooklands recently) both had top scores. F. G. Mann (998 Harley D. sc.) lost the crank case plug early on, and ran most of the way on a poor oil supply; consequently one hill failure out of ten hills was a good performance.

In the Bath team, the G.N. light car driven by Noel Harbutt, had no failures; all the sidecars failed on one or other of the hills. Vic. Anstice (the Douglas T.T. rider), on a 749 c.c. Douglas, kept a clean sheet until the second ascent of Ubley, when his gearbox seized; fortunately he was able to free two gears and finished on time. The Bath solo men were very unequal, one or two doing well, but others lost many points.

Of the twenty other competitors, E. G. Fery, on a racing G.N., conquered the hills by sheer speed.

350 c.c. Beardmore-Precision with Barr & Stroud Engine.

SPECIFICATION.

ENGINE: Barr & Stroud; four-stroke, single sleeve valve, 70 × 90·5 mm. (350 c.c.).
FRAME: Beardmore-Precision; rigid, all steel with integral pressed tank.
LUBRICATION: drip feed.
BRAKES: Front: contracting band. Rear: V block in dummy bell rim.
TRANSMISSION: All chain (½ × ¼).
GEARBOX: Sturmey-Archer, three-speed.
TYRES: 26 × 2⅜.
FORKS: Beardmore-Precision leaf spring.
WEIGHT: 210 lbs.
PRICE: £90.

NOT having previously ridden a machine fitted with the Barr & Stroud engine, yet fully aware that as a unit it had special features which had enthused more fortunate colleagues, the opportunity to borrow one for an afternoon was seized with alacrity.

For journalistic road-testing purposes the selection of a machine taken to the Isle of Man as a T.T. hack by one of his staff is scarcely fair to the manufacturer, who naturally wishes to place a new, if not specially selected machine into the hands of a pressman.

Not a New Machine.

However, it was just fortuitous circumstance that placed a very much used, very dirty, and altogether ancient and ill-used mount in our possession on that sunny afternoon when the machine was tried.

As the weather was very hot, no difficulty was experienced in starting; with great ease the engine came to life with the weakest thrust of the starting pedal. Moreover, the smooth way in which it commenced to tick over, without any preliminary racing or fuss, pointed to a commendable freedom from those minute air-leaks which often have an appreciable effect on some most excellent poppet valve engines until the heat of the cylinder has reached the carburetter.

Before starting away the complete absence of the usual rattle of a poppet valve engine was noticeable, and the exhaust was quiet almost to the degree of "woolliness."

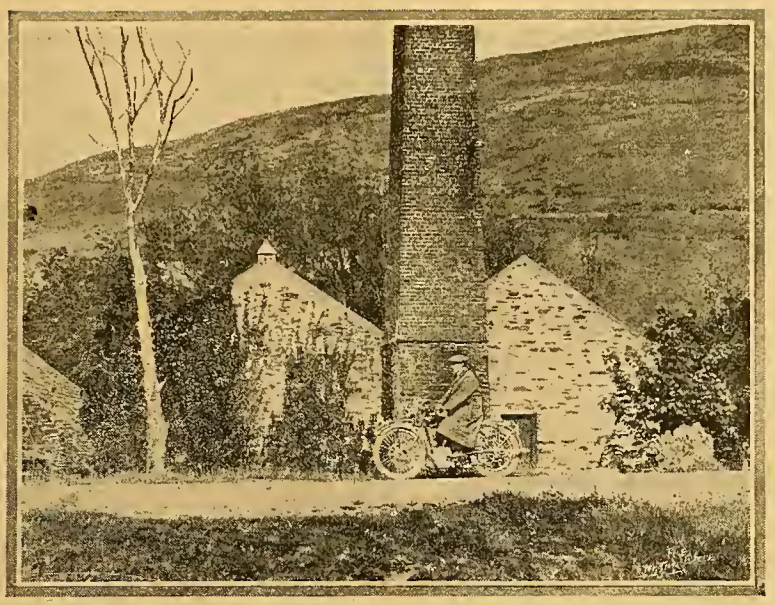
Letting in the clutch gently without appreciably opening the throttle, the machine went away well on its first gear; no doubt the large outside flywheel permits this unspectacular method of starting, and maybe in consequence will be a great grief to the really hot type of rider who "gets away" from the starting line of an all-night reliability trial as though commencing a "standing start" attempt in a speed hill-climb. To such as he, however, the docility of the B. & S. engine may be circumvented by widely opening the throttle and dropping in the clutch on middle or top gear, for the gentlemanly tone of the engine's conversation belies its manner if it is so desired, and it will deliver a decidedly hefty punch.

Subtle Charm.

Once on the road it is difficult to describe in what way the power unit differs from other first-class engines. Take the best single-cylinder poppet valve machine there is—letting "best" in this instance signify such qualities as flexibility, silence of operation, and freedom from vibration.

There are one or two engines in which these qualities may be said to be developed to the utmost extent possible to their type. Good! Mount a machine

Road Tests.—



The Beardmore-B. & S. was tested in the Isle of Man. It is here shown passing the deserted mills in Sulby Glen on its return from a successful attack on the hairpins and gradients that lead to the Snaefell mountain road.

powered with the B. & S. engine, even one with a worn and slapping piston and a rather noisy gearing to the magneto, as had that fitted in the Beardmore, and an indescribable difference will be sensed. It is a difference appreciated rather than felt as this, that, or the other apparent and positive quality.

That rather "woolly" exhaust sound is indeed deceptive. Even in a comparatively heavy layout like the Beardmore frame, which is built with an eye to stability and consequent comfort of mind, the engine is capable of a thoroughly satisfactory touring performance on the open road. In hill-climbing, too, there is ample power for the ascent of freak gradients, picking a course amongst rocks and boulders at low speed; throttling down to a dead crawl on a hairpin and opening wide immediately a fair passage is assured.

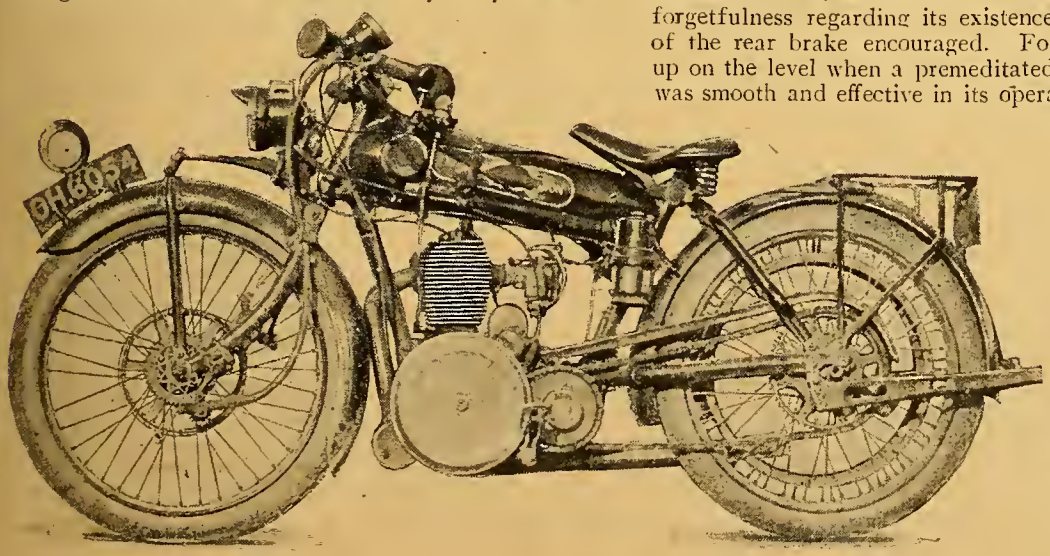
Under all such circumstances a smooth response is made to the opening throttle; there is a kind of elastic "push" which enables the machine to be controlled with great flexibility at low speeds without any tendency to knock and without the necessity for delicate spark manipulation; somewhat a rare quality with a long-stroke cylinder.

On the particular engine under review a decided piston rattle was evident, and, as before mentioned, the magneto drive appeared to be unduly noisy. The former may well have been a characteristic of the individual machine, but the latter was rather inferred to be a defect of the method of driving. Chains seem to be preferable for such subsidiary drives.

Robust Frame Construction.

So far the engine alone has been dealt with, but the Beardmore-Precision frame is by no means unworthy of notice. The sturdy construction is obvious not only to the eye, but to the muscles when the machine has to be hauled up on to its stand. Slightly greater height than the normal increases the effort of the latter operation, but does not appear to affect the steering.

A comfortable riding attitude is provided by the sports type of layout, and the high footrests and ample ground clearance make the machine a suitable one for trials and general rough riding. Steering was remarkably good and steady; even a fiercely braked back wheel on a rough and stony descent only resulted in a perfectly straight-skid of some twenty yards; incidentally the rear dummy belt rim brake is not harsh unless powerfully applied. The braking action is smooth and progressive with the pedal conveniently situated against the right footrest in a position which does not necessitate any searching. The contracting band front brake, it must be admitted, was neglected. This omission to test a detail of the machine is due to a forgetfulness regarding its existence which the power of the rear brake encouraged. For ordinary pulling up on the level when a premeditated stop was made it was smooth and effective in its operation.



Altogether an admirable mount, powerful enough for all ordinary and strong enough for most extraordinary riding.

As a machine suitable for overseas conditions the 350 c.c. Beardmore, with Barr & Stroud engine, should be ideal. It is strongly built and easy to handle, while there is ample ground clearance and the footrests are placed at a good height.

IDEAS: USEFUL AND INGENIOUS.

A Selection of our Readers' Home-made Gadgets, with some Practical Hints on Work in the Garage.

Repairing a Mechanical Horn.

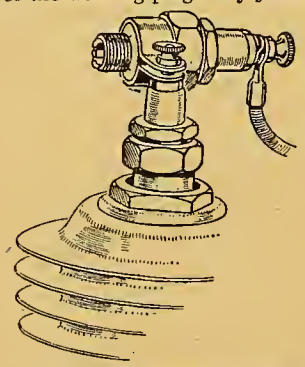
HERE is another simple scheme connected with mechanical horns. It frequently happens that the plungers of these get lost, sometimes jumping out on the road and never being found again. In this case a scrap-box repair was carried out by Mr. P. Oddy. A door-knob with the square spindle passing through the lock was discovered to be an exact fit in the square hole at the top of the horn, and the ratchet teeth were easily filed in one face. An external spring under the

Using a door-handle as a plunger for a mechanical horn.

knob will provide for a return of the plunger if an inside spring cannot be arranged for the new plunger.

A Free of Charge Spark Gap.

By utilising a piece of strip metal as a clip, Mr. E. Roberts, of Huddersfield, carries a spare sparking plug at the terminal of the working plug. By joining up



Cheap method of producing a spark gap.

the high-tension wire to the spare a spark gap is made automatically, for the current passes over the points of the top plug and so through its body to the terminal of the main plug, where it fulfils its normal function.

Joining a Chain.

Ordinarily the easiest way to join a chain is to place both ends on the sprocket, forcing it down into the teeth until the extremities approach sufficiently near to each other to insert the connecting link, finally adjusting the tension by sliding back the wheel by the method provided by the maker of the machine.

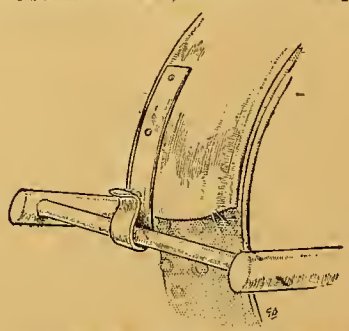
Sometimes the chain is just long enough to be correct when jointed, but just short enough to be difficult to pull into place. Mr. A. Young, of Loughborough, sends a tip (which is not original) that may help someone out of a difficulty. A piece of string is passed through the end links in the manner shown, and by pulling thereon, "the block and tackle" purchase will draw the end

"A little bit of string" as an aid to chain repairing.

links together quite easily. This paragraph really should be headed "Putting the half-Nelson on the chain."

A Stand Clip.

No doubt Mr. J. S. Bakewell, of Penrith, has been troubled by a stand-clip lacking in the essential quality of "grip," otherwise he would surely never need to deal with it so drastically. But then, perhaps all the roads he traverses are not like that lovely stretch leading to Carlisle. The sketch is self-explanatory. A strip of springy steel is bent into a hook and pinned or riveted to the tail of the mudguard; the stand crossbar falls into the crook, and it cannot drop down under any circumstances. So much for the *pro*.

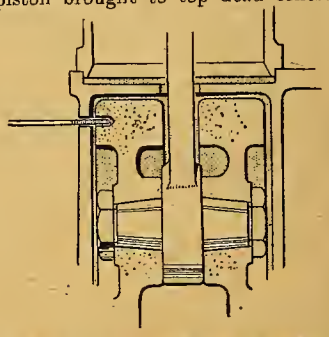


An old but effective method of gripping the stand.

On the *con* side it would seem rather a nuisance that each time the machine is to be jacked up the stand must be raised, and the mudguard pressed in until the crossbar clears—but then perhaps Mr. B. always leans the machine on its foot-rest or uses a prop-stand?

Locating the Crank for Timing Purposes.

When the amateur tuner becomes bored with searching for the piston top through the compression tap hole with a piece of wire Mr. C. S. Moores, of Exeter, recommends him to take the drastic step of drilling a small hole through the crank case wall vertically above the main shaft. Then when the cylinder is taken off and the piston brought to top dead centre, a

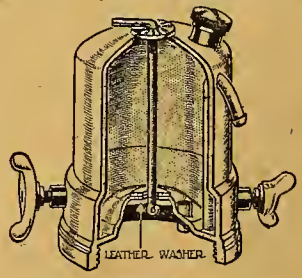


A device to facilitate timing the engine.

drill may be passed through and a corresponding hole made in the flywheel. During future tuning operations there need be no further difficulty in searching for t.d.c. Simply insert a spoke through the crank case hole and slowly rotate engine until hole in flywheel coincides. A small screw may be used to plug the hole.

Roadside Repair to a Generator.

Many readers no doubt have suffered generator trouble. Perhaps the most annoying mishap in this connection, however, is the breaking of the drip-feed adjusting screw. This was recently the experience of "C," who effected a roadside



Improvised generator drip control.

repair as follows. The valve seating of the water container was removed and a large leather washer cut. A piece of wire was passed through this with an eye formed on its end. The other end of the wire was passed through the top of the water container and bent over so that the water just leaked by the washer sufficiently to generate gas. To shut off the water entirely, the wire is pulled until the washer is drawn into the hole, and then bent over sharply.

Insurance Problems.

A Feature in which Insurance Questions are Answered and Discussed.

It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this feature has been formed to deal impartially with the various problems that are presented to us.

The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enable "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.

Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.

Insuring the Licence.

Mr. Reggie Mackintosh, writing from Leeds, asks: "In basing 'present value' of a machine, is it any use adding '£3' or '£4' as value of the taxation licence in consequence? Would the insurance company pay this additional amount in the event of the machine and its licence being stolen?"

The insurance companies are not concerned with the licence, but only with the insurance of the machine, so that consequently, in stating the value of the machine at the time of proposal, the cost of the licence should not be added.

* * * *

Basis for Premium Rating.

Mr. H. G. Fairlie, London, S.W.3, and Mr. B. W. Jones, of Brockley, S.E.4, revert to a question which has been discussed several times in *The Motor Cycle* which concerns insurance companies' horse-power basis for premium-rating purposes.

Mr. Fairlie instances his own machine, which has a 350 c.c. two-stroke Precision engine, the makers' rating of which is 3½ h.p., and points out that there are other 350 c.c. engines which are rated according to their makers at 2¾ h.p.

Mr. Jones instances a 678 c.c. Martinsyde rated by the manufacturers at 6 h.p., and points out that a 650 c.c. Quadrant is rated by the makers at 4½ h.p.

Whilst Mr. Fairlie wishes to know whether an insurance company is justified in charging him the higher premium according to makers' h.p., Mr. Jones wishes to know whether an insurance company would permit him to insure under the scale of premium chargeable for machines below 5 h.p.

Insurance companies adopt the basis of makers' h.p. for purposes of rating, the advantages of this system being, from their point of view, its simplicity, besides being understandable by the vast majority of motor cyclists.

We certainly consider that the motor cyclist has a legitimate grievance in this particular connection. The present basis of rating produces certain anomalies, and the solution of the difficulty would appear to be with the makers, and it is only on the adoption by the makers of a standard h.p. basis that these can be removed.

* * * *

Accidental Damage.

Mr. J. Gill, writing from Peckham, says: "I had the misfortune to run into the back of a sidecar which belonged to my brother, owing to a sudden check in the traffic. My number plate cut the back of the sidecar. I reported it to my insurance people and my brother did likewise. My brother's company, of course, refuses to pay, and the company I am insured with has written to him and also refused; I have heard nothing further myself. In this case I shall have to pay for the repairs myself. Is it worth while insuring if you have to pay insurance and then pay claims?"

It certainly would appear, granted the particulars are as stated, that you are being unfairly treated. We would like fuller particulars, and on receipt of these will be pleased to advise more fully.

* * * *

Repaired or "Patched Up."

"Recently I became the owner of a brand new two-stroke," writes Mr. S. W. Onseley, Ealing, W., "but unfortunately on the second ride I was unlucky enough to have a bad collision with a car. I am fully insured, but I should like to know whether the machine should be returned to me as new, having only done about thirty miles, or whether it should be patched up and returned. This is, I think, a question of vital importance to anyone purchasing 'out of income.'"

You are entitled to receive your machine back properly repaired and in as good condition as it was prior to the accident. Indemnity under an insurance policy indemnifies you against loss; that indemnity is only complete when the machine is returned in as good a condition as it was prior to the accident.

SUMMARY.

In addition to the queries dealt with above, we have received a number of letters asking for advice, replies to which are given below:

W.J.K. (St. John's Wood, N.W.8).—You should draw the attention of your insurance company to the fact that the value of your machine is now less than when first proposed for insurance, and inquire if you are entitled to a reduction in premium.

H.R.G.W. (Cranford, Middlesex).—We know nothing against the organisation you name.

D.G.R. (Milan, Italy).—We do not know of any British company transacting motor cycle insurance in Italy.

F.B.T. (Greenhithe, Kent).—The Autocar Insurance Co. will issue you a policy subject to satisfactory proposal at the premium you name. It would also give you the other information you seek. The fact that you desire to change your insurance company does not affect the position at all.

WHICH SIDE FOR THE SIDECAR?

Readers Discuss the Subject of Right- and Left-hand Sidecars.

IN an article in *The Motor Cycle* of June 29th it was suggested that British sidecars are fitted on the wrong side, that the better way would be to attach them to the right-hand side of the machine. Mr. Batten's remarks have aroused considerable interest, and a selection of opinions from our readers is appended.

Experience with a British outfit on French roads, where the rule of the road is the reverse to that obtaining in this country, leads Mr. R. H. Cox to disagree with the case for a change. He writes:

"There are certainly advantages in fitting sidecars to the right-hand side, but I am inclined to think that Mr. Batten has never tried out his theory thoroughly in this country or very serious disadvantages would have become apparent to him.

"In the first place he would wish us to ride along the camber of the road with our sidecar ready to lift at the slightest provocation; we all know that an anxious moment can be experienced when forced to the right of a steeply-cambered road in passing another vehicle; Mr. Batten would wish us to have many anxious times.

"Furthermore, and equally important, it would be found with this arrangement that, when negotiating by-lanes and narrow roads the driving wheel of the outfit would be attempting to perform its duties in the worst possible part of the road, while the sidecar wheel which has little or no gripping to do, would be riding on good hard ground.

"My remarks are founded on the experience of a British outfit on French roads, where the right side rule obtains; and, in my opinion, the two disadvantages given above very much outweigh any slight advantage we might gain in cornering and adjustment of machine by adopting the 'sidecar on the right' principle. Besides, what about standing on your head to adjust the tappets!"

Overtaking other Vehicles.

Quite a different objection is put forward by a correspondent signing himself "Safety First":

"Mr. H. M. Batten, I think, fails to point out the one great fault of all left-hand drives, namely, the enormous danger present when a left-hand driven machine is overtaking and wishes to pass a heavy vehicle which is travelling slowly and completely obliterating the view of traffic coming in the opposite direction. To pass the other vehicle the driver of the left-hand machine must swing out nearly his whole width beyond the rear off side of the vehicle he is passing before he can even see if there is any vehicle coming in the opposite direction. On narrow roads the danger in doing this is very acute with modern fast motor traffic, and even on wide roads there is considerable danger. This, incidentally, does not seem to have been taken into account by the commission which was set up to inquire into the advisability of forbidding left-hand drives.

"I speak against the left-hand drives as one who has had experience of its dangers, having had many 'narrow squeaks' when travelling on open country roads on market days, with left-hand driven Fords turning out suddenly from behind heavy market carts. Of course, the driver is hardly to blame—he cannot see whether his road is clear or not, and when there is little traffic he sounds his horn and swings out, taking the risk, sometimes with disastrous result, because he stands very little chance of pulling in again quickly.

"It seems to me that this ever present danger with left-hand drives overrides the advantage of easy cornering to the left, and as most people naturally take the precaution of slowing down for all corners, left or right, unless they want a heavy tyre bill, it would make but little difference in that respect if the right-hand sidecar fitting were adopted. Nowadays the average sidecar is pitched much too low to come up in the air at moderate speeds on left-hand corners, and there are very few sharp bends now which are not provided with the familiar red warning triangle."

Weighed in the Balance.

Cornering difficulties are Mr. B. R. Reiss-Smith's chief objections to the proposal:

"In my opinion Mr. Batten's suggestion is entirely wrong, and my conclusion is based on the following facts:—

"(a) Left-hand bends, sidecar on right:

(i) Bad for seeing round corner—a 'slight disadvantage' according to your contributor.

(ii) Sidecar will not lift—a 'big advantage.'

"(b) Right-hand bends, sidecar on right:

(i) Good for seeing round corner. Naturally this must be classed a 'slight advantage' in sympathy with (a) (i) above.

(ii) Sidecar tends to lift. Similarly this must be a 'big disadvantage.'

"From the above points brought out by Mr. Batten it is surely mathematically correct to say that the battle is at least 'all square.'

"Mr. Batten admits that the chief reason why sidecars are fitted to the left is for the comparative safety of the passenger in case of collision. Surely, as we place ourselves responsible for our passengers, this is a big advantage.

"In addition, Mr. Batten apparently does not consider the fact that when turning to the left with a left-handed sidecar the camber of the road helps in preventing lifting, whereas in turning to the right with a right-handed sidecar the camber actually assists the lifting.

"This point alone should surely decide the issue. Indeed, I think that turning to the right with an empty right-handed sidecar (especially when the turn is from flat to uphill) would be positively dangerous above a crawl, without any emergency coming into the situation at all.

"True, with a left-handed sidecar the effect of lifting is likely to be more serious, as Mr. Batten points out, but why not adopt the plan where lifting is less likely to occur?

"As regards chain and magneto adjustments (and I don't see many people making adjustments on the roads nowadays), I think this is quite a minor point. Chains are not always on the left side, and neither are magnetos wholly adjusted from the left."

One Way of Settling the Problem.

"Eye-Sore" has original ideas on the matter, although we do not think that they provide a solution to the matter:

"If the right-hand side is also the right side, it will mean that all the makers of sidecar outfits must re-design their products, to a certain extent anyhow. Would it not be better if they went the whole hog and re-designed them as mechanical and efficient vehicles for transporting two, *i.e.*, as three-, or, preferably, four-wheeled cycle cars?

"There are, to my mind, many disadvantages to the left-handed sidecar, and just as many when it is on the right. Why not take it away altogether?"

Finally, two and a half years' experience with a "right-handed" outfit, of the make which his *nom-de-plume* implies, convinces "Harleyite" that our original contributor was right. "Harleyite" writes:

"I agree with all the author says, as I have driven a right-handed sidecar, attached to a Harley-Davidson, for the last 2½ years, and find that for cornering, etc., it has a great advantage over the left-handed pattern.

"Many times I have heard remarks passed, some intended to be sarcastic, but these were entirely due to ignorance, and possibly if the doubters were to drive one they would alter their opinions.

"It is always my intention to stand by the right-handed sidecar."

Letters to the Editor

The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address

ARE ENCLOSED CHAINS DESIRED?

Sir,—Is it possible that a difference of opinion as to the desirability of a totally-enclosed chain-drive really exists? I cannot believe that it is so.

Two years ago I bought a much-advertised machine, one of the new-comers, and was assured at the Show that before deliveries commenced, full protection for the chain would be provided. This protection did not materialise, and after the first fifty miles, the near side of the back wheel was smothered with black oil, probably due to too much lubricant in the gear box. Realising also that the chain would have to be frequently removed for cleaning, and having no desire to spend a deal of time and trouble in this unprofitable recreation, I decided to have a chain-case made. I soon found, however, that no one was a bit keen on the job, as it was a spring frame machine, so had to do the work myself.

Now, after several thousand miles, the chain is as good as new. It has been regularly oiled, but never removed from the machine, and very seldom adjusted.

My question is prompted particularly by the fact that I shall probably want a new machine next year, but on looking over specifications of the various possibilities, I find a naked chain is the rule rather than the exception; the explanation generally put forward being that if the chain is enclosed it never receives any attention until, through want of adjustment, it jumps the sprockets and makes a general mess of things.

Personally, I am not prepared to accept this as the real explanation, and would suggest that the manufacturers are not prepared to supply what is really preferred by 99% of their clients and in my opinion an indispensable fitting, until it is insistently called for. EXCELSIOR.

Birmingham.

CHILDISH "BLINDING."

Sir,—I was on a 250-mile journey the other day, and was going as fast as I could to get it over. (To prevent shoals of letters, indignant, witty, and otherwise, I may say at once I do not claim a 40 m.p.h. average.) I came up to and passed a gentleman on a well-known "sports" model, which, I believe, is guaranteed to do "70."

A few seconds later I heard a roar and was enveloped in a cloud of dust, which, of course, was no more than I expected. What I did not expect was to catch up and pass the same gentleman about two miles further on. Still, less did I expect to hear another roar and be enveloped in another cloud of dust. About two miles further I caught him up again, with the same result, and this particular sort of tip and run business went on for the next fifty miles or so, when my tormentor turned off on another road. My own machine is a 293 c.c. touring model—so there was not even the possibility of my being goaded into a race, and the gentleman on the sports model must have known this. Besides which, I was "all out" as it was.

Now my grievance is this: if a man wishes to "blind," by all means let him, and good luck to him, but to demonstrate the superiority of a 70 m.p.h. over a 40 m.p.h. machine in the manner I have described seems to me to be most extraordinarily childish, and incidentally the most obnoxious kind of "bad form" met with on the road. N. W.

Wroxham.

EXPERIENCES WITH THE HARLEY FLAT TWIN.

Sir,—As a Harley-Davidson enthusiast and a constant reader of your very interesting paper, I think it is my duty to correct certain impressions which may have been formed by anyone reading the report of your road test of a Harley flat twin which appeared in your issue of February 16th. Though this letter is somewhat belated, I hope that you will give it a place in your columns.

I purchased my first Harley Sport in June, 1920, and it ran 3,600 miles without decarbonising, and this would not have been done had not the exhaust valve on the rear cylinder got stuck. After decarbonising the machine did not give trouble for another 2,000 miles, when clutch slip set in. This I found incurable by the usual method of tightening the clutch springs, so I changed a set of discs, since when there was no trouble. Up to October of last year the machine had done 9,000 miles. The original tyres were still on the 'bus, and looked good for another 2,000 miles. This machine averaged 73 m.p.g. for the whole of its mileage, while the oil consumption worked out at 1,200 m.p.g. The highest speed it attained was 52 m.p.h. with two up, when the machine was not in perfect tune. This, as you will note, is 7 m.p.h. faster than your representative got out of his Harley, and the fuel consumption is lower by 8 m.p.g. I can vouch for the accuracy of the speedometer, a Johns-Manville.

At the end of last October I sold the machine, and bought an electric model of the same type and make.

This machine has done 4,000 miles to date, with petrol and oil consumptions of 80 and 1,100 miles per gallon respectively. I have touched 50 m.p.h. on it and hope to do better in a day or two, as I have just decarbonised and ground the valves. I might mention that an engineer friend of mine has succeeded in obtaining 56 m.p.h. on his Harley, without any faking of the engine. LEO D'ALMADA, JR.

Kowloon, China.

WHERE IS IT?

Sir,—I think the hill which your correspondent "O.E. 2990" refers to is Crackley Bank, and, although I am not a good judge of gradients I should say 1 in 5 is a fair estimate for its steepest part.

I climbed the hill a little time ago with a Light Tourist New Imperial, but as the engine was new I changed to second for the last portion.

As the hill is fairly straight, and can be rushed, it should be a fairly easy top-gear climb for the average machine, but to climb it with a 494 c.c. sidecar on a gear of 8 to 1 and 22 stone up, is no mean performance. D.H.2946.

Stafford.

ILLUSORY PRICE REDUCTIONS.

Sir,—There is a firm of motor cycle manufacturers which recently reduced the price of its single speed model *only* by £5, so that one has *now* to pay £17 10s. extra for two-speed c. & k.s., whereas six months ago, when things were dearer, one could get the two-speed model for £12 10s. extra. The specifications then and now are identical. 26X3.

Kent.

TEMPERAMENTAL ENGINES.

Sir,—Just a suggestion to add to the confusion of ideas on super-Rudging: I have never owned a Rudge, but have had several Senspray carburetters, and incidentally found them excellent instruments. Each one, however, had the same fault, viz., the tickler return spring after some use took a set sidewise and by bearing on the needle made its action sluggish. This, of course, led to alternate flooding and starving and consequently to irregular running. I removed the spring and gave up "tickling," leaning the machine over instead when a little loose juice seemed to be indicated.

Will the gentleman who has tried every suggestion up to now see if the above has any effect on his trouble?

J. STUART WHITE.

YET AGAIN!

Sir,—Motorists here, in one of the outposts of the Empire, have read with much interest your article on overseas trade in motor cycles. Those of us who still have a regard for the condition of the old country, look with despair at the great preponderance of American machines on the road. To find the cause, we have to get beyond the actual machines, as the British have proved themselves to be equal to their Yankee rivals both in speed and reliability. The reason is the service of the agents. Well-equipped garages with plenty of spares, are at the service of the riders of the Harleys and Indians, while the man who sells the English 'bus is "very pleased to get one from home." It is heart-breaking to the enthusiast. Then, too, prices.

One well-known lightweight, retailing at home at £85, is being offered for sale here at £135; while another with a home price of £95 is being sold at £114. Why? Valves at home, 3s.; here, 12s. 6d.

We see the advertisements in *The Motor Cycle* and we like our money's worth. If the manufacturers cannot control their agents, there is not much hope for the revival of England's overseas trade. A. K. H.

Port Elizabeth, South Africa.

GOGGLES AND HEARING.

Sir,—Being one who likes to maintain a good pace and rides in all sorts of weather, I find the winds very trying for my eyes, yet never feel safe whilst wearing goggles.

The trouble is that they greatly upset my power of hearing, or rather some sense which we have which enables us to do the right thing at the right moment when in a tight corner.

For some time I thought this must be just a silly fad of mine, but on mentioning it to a pal I found he was troubled the same way.

I thought perhaps many of your readers have had the same experience, and it would be a great boon to know how to overcome this difficulty. SUTTON BANK.

Yorks.

BRITISH LIGHTWEIGHT'S WONDERFUL PERFORMANCE.

Sir,—I notice in your issue of July 6th the wonderful performance of a Triumph Junior, ridden by J. Booth, in the Durban-Johannesburg Trophy.

For its size and engine capacity it is nothing short of marvellous that such a small powered cycle should keep up an average of 24.3 m.p.h. on a very rough and trying course of 396½ miles. The hills and state of the roads must have been a gruelling test, and a great amount of credit is due to the rider.

Surely this must be a record for an engine with a cubic capacity of only 225 cubic centimetres? I now feel proud of being an owner of a machine of the same capacity and make. W.X. 1779.

Gerrard's Cross.

SILENT OPEN EXHAUSTS.

Sir,—Might I say a few words in favour of the straight-through exhaust pipe. The general impression seems to be that a machine with a straight-through exhaust must be noisy, which, I think, is quite without justification. I have in my mind a well-known "4 h.p." single which, with the standard exhaust system I have known of, ejects the most ear-splitting noises, but which, with a straight pipe of sensible diameter (1½in. or over), has become a most pleasant machine to hear. TENTERDEN.

Kent.

THE BATTLE OF TYPES.

Sir,—In your recent article on "The Beginner's Mount," there were two passages which seem to me to need some explanation.

"There is so little advantage in one type over the other" (four-cycle and two-cycle engines).

"All British machines are to all intents and purposes of equal merit in the matter of reliability."

This would seem to class the woolly, petrol-drinking, noisy, ineffective average two-stroke, the steady-plugging-pull-for-hours-without-getting-faster four-stroke type, such as P. & M. or B.S.A., the super-revving o.h.v. 350 c.c. four-stroke, and the silent sleeve-valve engine in one and the same category.

It appears to me that a novice is very liable to gain a very false impression of modern engines, for neither in reliability, speed, economy, or noise do the four types mentioned bear any apparent connection—save perhaps in degrees of noise!

JACK G. NEWBIGGING.

[Our correspondent, we fear, is a trifle prejudiced against two-strokes. Does he recall, to name but one instance, the performance of the Levis and Scott machines in this year's T.T. Races?—ED.]

IMPOSSIBLE AVERAGES.

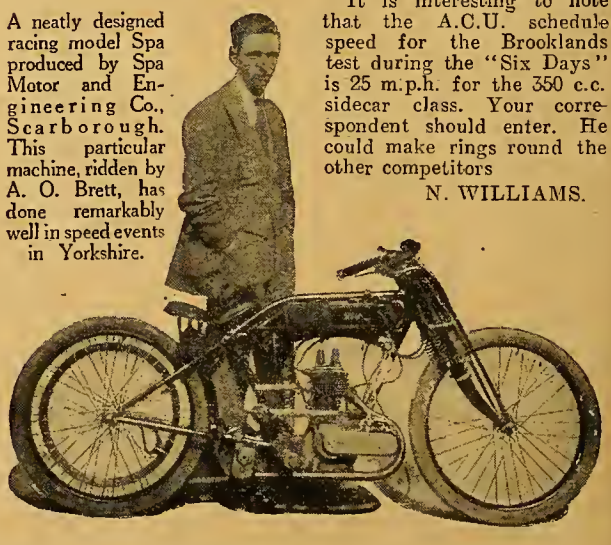
Sir,—I must apologise for intruding into an affair which really is not mine at all, but may I ask "H.S.," who writes in your "Readers' Replies" column, what make of speedometer he uses?

It is beyond possibility that a standard 350 c.c. Douglas can average 30-35 m.p.h. with loaded sidecar. This question of average speed has been raised again and again. The average "H.S." claims is an extremely good one even for fast solo mounts, and on my Scott Squirrel, admittedly one of the fastest machines obtainable, it is only under extremely favourable conditions that I can average 35 m.p.h. And that average necessitates taking full advantage of the Squirrel's powers of cornering and hill-climbing.

I should imagine 35 m.p.h. average impossible even with a solo 350 c.c. Douglas, and with sidecar somewhere about 25 m.p.h. the extreme limit.

It is interesting to note that the A.C.U. schedule speed for the Brooklands test during the "Six Days" is 25 m.p.h. for the 350 c.c. sidecar class. Your correspondent should enter. He could make rings round the other competitors

N. WILLIAMS.



A neatly designed racing model Spa produced by Spa Motor and Engineering Co., Scarborough. This particular machine, ridden by A. O. Brett, has done remarkably well in speed events in Yorkshire.

GENUINELY AMATEUR TRIALS.

Sir,—Surely your correspondent, Mr. O. C. H. Giddy, is mistaken in his statement that the Arbuthnot Trophy Trial (which, by the way, was instituted for *serving* officers of the R.N., and is therefore closed to ex-officers) is the only genuine amateur event of the year.

He has only to read *The Motor Cycle* regularly to discover many others. EX-N.C.O.

Kidderminster.

INFLUENCE MACHINES FOR I.C. ENGINES.

Sir,—Further to my original letter suggesting the use of influence machines for ignition purposes, and in face of two letters published on July 6th, I would like to point out that the spirit which prompted the idea was that, writing to a journal like *The Motor Cycle*, the subject would catch the eye of some *scientific* motorist who would possibly be a help in developing this branch of a neglected science to some useful purpose.

The static influence machine, to those who *understand* it, undoubtedly opens up a great field of research, and I think eventually it will be the means of such improvements as to create quite as much an advancement over the magneto as the wireless telephony has over ordinary telephones.

I was indeed pleased to see that interest was shown in a practical form by Mr. Lutman's letter, although every one will admit that the apparatus as described is of a crude nature, and has many mechanical weaknesses, but *which could all be overcome satisfactorily if the same time and money were spent upon it as the dynamo and magneto have had spent on them.* I would like Mr. Joughin kindly to take note of the above, and also to ask if he is familiar with the Tudsbury influence machine, which works in a *metal* container, under atmospheric pressure, which gives an excellent spark for X-ray work, and is capable of lighting a tube easily where an ordinary induction coil of the *same rated spark length would fail entirely.*

For this purpose (X-rays) anything less than an 8in. to 10in. spark length is merely a toy, and as a ¼in. spark is all that need be talked about for motors I still feel that a much lighter and smaller instrument can be developed from the static machine to take the place of the magneto. As for the idea which Mr. Joughin has that no type of machine can give a constant stream of sparks, I would say that he is partly right and partly wrong. Even the magneto must have an interval sufficient to charge its condenser; it is the same with an induction coil, with the added weakness of its current being alternating.

With the static machine, its current being *uni-directional*, the charging interval is considerably less; therefore, given the proper insulation of parts, a much more constant and greater output can be obtained with the static machine than with either the coil or magneto. It is its present undeveloped state which is its drawback, and it is the improvement of it which I am greatly concerned about and which I was anxious to see taken up by those who understand it such as Mr. Lutman, but unfortunately one's work is often nullified by such writers as "Losch-Bodge," who have no scientific knowledge or interest, and who are simply content to use the only means attainable at the moment for a given purpose.

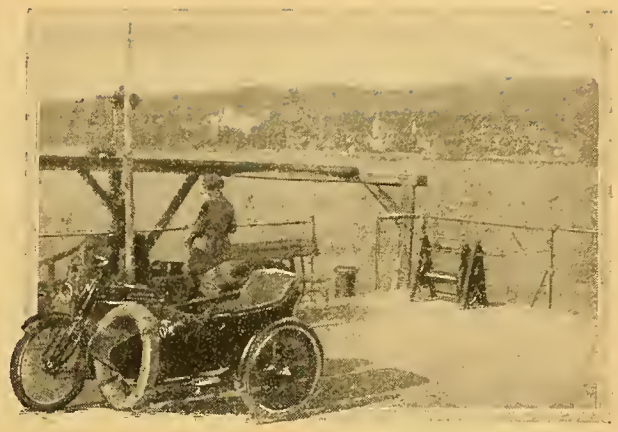
FREEMAN LEE.

RUNABOUT AND SIDECAR.

Sir,—I see "A.F.J.," in his article comparing the Morgan with the sidecar outfit, complains of the difficulty of accommodating an extra passenger in the former vehicle.

I should recommend him to try the Family Morgan, which would, I think, fulfil his desires. The design of the body is, in my opinion, an improvement on the *de luxe* model, and unless the driver is a very lanky fellow, he will find ample room in the front seat, and if the back seats are not required for passengers they form an excellent place for luggage when on tour.

I have been a motor cyclist since 1912 (a purchaser of *The Motor Cycle* for the same period), my last machine being a Triumph outfit, and with wife and three children I had a difficulty in packing them in the sidecar. Not being able to afford a four-seater car, my choice for a new machine rested between an 8 h.p. motor cycle and double-seater sidecar and a Family Morgan, and I decided on the latter. I am glad to say that I have not regretted the purchase.



IN A FAMOUS EUROPEAN TOURING DISTRICT. A P. & M. sidecar outfit, laden for touring, crossing the Danube near the Castle of Persenburg.

I use the machine professionally, and for this purpose the Morgan has many advantages, perhaps the greatest of these being that I do not have to garb myself in overalls, but can ride in comfort in my ordinary clothes. If it rains I simply put the hood up and am then in the dry—a great asset.

I agree with "A.F.J." that, owing to the absence of a reverse gear, it is rather difficult to turn the Morgan in a narrow road, but it is no heavier than a big outfit, and I have many times turned it round single-handed in a narrow lane without undue exertion.

I have no connection with the Morgan Co. NM 1519.

Biggleswade.

Sir,—I was very much interested in the article entitled "Runabout and Sidecar." Your sub-title aptly describes this subject as "ever green"; yet one deplores the fact that it should be so; a little more attention devoted to securing the comfort of sidecar users would, I submit, leave the majority of advantages in favour of the sidecar outfit when compared with the runabout.

For some time I have owned an 8 h.p. outfit bearing a very famous name. I am pleased to say that I have never had a moment's mechanical trouble; so accustomed have I become by this time to exemplary engine performance that the thought of an involuntary stop never enters my head. Leaving the question of weather protection out of consideration, I am yet dissatisfied with the outfit as a means of getting about the country.

My dissatisfaction comes entirely under the heading of comfort. As a motor cyclist I have always endeavoured to obtain two kinds of comfort—one physical and the other mental. In my own case I find that both must be ministered unto if I am to have an enjoyable trip. We all know well enough what is meant by physical comfort. By mental comfort I wish to convey the "I-needn't-worry-about-that" feeling which cheers a man who, on a long journey, reflects for instance that his rear wheel is of the easily detachable variety.

I do not agree in the very least with your contributor's definition of "*comfortitis—a dread disease that must run its course.*" (One could more readily understand the etymology of "discomfortitis"—a state of affairs where the inflammation is only *too* apparent.) He speaks as though the desire for comfort were a mere passing affliction, like measles. I submit that he really objects to the continual bumping and banging of main road travel as much as I do, yet, seeing there is little chance of getting manufacturers to study the comfort of those who ride their products, is content to make the best of things as they are. This policy, however, tends to delay the advent of the really comfortable sidecar outfit by quite a few years.

Folkestone. RAYON DE SOLEIL.

H.P. RATINGS.

Sir,—*Re* the proposed "1 h.p. per c.c." rating, I should like to point out that two engines of identical cubic capacity may develop different horse-power if one is designed for touring and the other for racing. It seems to be obvious that a "hot-stuff" engine should be credited with a considerably greater power output than its "slow but sure" brother.

C. E. N. BALMFORTH.

"THE SPORT AND THE MASSES."

Sir,—In reply to "R. O. Bins," I would remind him that the T.T. races are held in the I.O.M. and not near London.

The reason for the small crowd is obvious. I would also emphasise that in Lancashire, anyhow, 80 per cent. of a crowd go to see sport and not to gossip.

Greenock, N.B. "V.S. 1503."

BEAUTIFUL PEMBROKESHIRE.

Sir,—I was interested in your article "Where to Tour," but I fail to agree with one part, in which it referred to "nothing of interest below Aberystwyth."

What about beautiful Pembrokeshire?—Newport (Pem.), a pretty little seaside place, and Fishguard (of which you give a picture); then on to the very old and quaint city of St. David's, the birthplace of St. David, with its ancient cathedral and palace ruins, and several places of interest; to the pretty village of Solva with its delightful fishing streams and picturesque harbour; to Newgele, a glorious three-mile stretch of sands, sufficiently firm for motoring; thence to Haverfordwest, which brings one into "Little England beyond Wales," where no word of Welsh is spoken; to Milford, famous for its shipbuilding and heaps of other things, and across the Haven to Pembroke? Several other places, too, one would see on the way, and anyone doing the tour, I feel sure, would enjoy it very much.

CONSTANCE E. SMITH.

THEORETICALLY CORRECT RADIATING FINS.

Sir,—Having read the controversy in your journal on cylinder cooling, I venture to ask a question relating to the cross sectional shape of cooling fins. It seems to me that in most cases the fins are of nearly uniform thickness from root to tip, only having enough taper to allow of drawing the patterns. Now the conducting area of a uniform fin increases in direct ratio with the diameter, thus giving greater conductance at the tip, where most of the heat has presumably been dispersed, than at the root, where all the heat has to pass through the metal. Also a fin of uniform thickness being cooler at the tip than at the root would tend to distortion.

From this I should conclude that the best shape of fin would be of a taper section, and that there would be a correct number of fins for any given set of conditions. Would any of your correspondents care to say whether or not this is so, and if not, to correct?

R.W.R.

Salford.

"A RIVAL TO BEGGAR'S ROOST."

Sir,—Referring to your account of a new Devonshire hill, I first saw this hill thirteen years ago. I approached it from the top on a push bike unaware of its existence, and thought a landslide must have taken place; the road seemed to have disappeared, being invisible till one is right on the brink of the hill. In those days there was a quite respectable water-splash at the foot of the hill, over which the present bridge was built some ten years ago (rather unfortunately from a club contest point of view).

It is said that a newly married couple returning to Ilsington were taken by an inebriated driver at full gallop, in a carriage and pair, down this hill without mishap, and a local youth has the credit of having climbed it on a push bike. Personally I have not yet ventured to put a motor cycle at it either up or down.

JOHN D. W. PATCH.
Vicar of Ilsington.

[Our correspondent goes on to point out that the local name of the hill is "Sibbs," not "Sims," and the nearby village "Ilsington," not "Islington."—ED.]

PRICES OF ALUMINIUM PISTONS.

Sir,—In reply to the letter of "A.H. 42" (Tynemouth), may I state that I have fitted, with entire success, two aluminium pistons to an A.J.S. twin at a cost much under the figure he mentions.

I shall be very happy to assist him.

ARTHUR E. BACH.

STARTING DIFFICULTIES—WITH A WATCH!

Sir,—I have recently fitted a handle-bar watch obtained from a well-known firm. It is satisfactory in all ways but one. If ever allowed to stop, it can only be restarted by twirling it rapidly in the hand after removal from the machine—rather a lengthy proceeding as the case is one of the "thief-proof" variety. No amount of swinging of the handle-bars or driving over "pot-holes" will persuade it to start; even the Jarrow roads fail. Can any reader suggest a simpler remedy than fitting a C.A.V. electric starter?

D. L. W. AWBURN.

Newcastle-on-Tyne.

THE ZENITH BRADSHAW.

Sir,—I read of your road test of the Zenith-Bradshaw with particular interest, inasmuch as I have experienced the same nuisance with the oil-pump indicator as you describe. I think it only fair that the true explanation of this should be given to your readers, as it will not alone be of interest to prospective owners, but will be much appreciated by present riders of this fine machine, who have not yet experienced the trouble.

The inside of the indicator consists of a plunger, to the bottom of which is screwed a leather washer, similar to a tyre pump washer. After several hundred miles running, with no signs of leakage, the leather, having become sodden with oil, suddenly, and without warning, goes on strike, and the lucky man—I was one, touch wood—discovers that his oil is being pumped on the road without getting seized up. The replacement of the washer (cost about 2½d.) takes about five minutes, and I strongly advise all Zenith-Bradshaw users to carry a spare washer and keep their oil indicators under observation. Messrs. Zeniths are now fitting a visible indicator to their new machines, and owners would do well to get one fitted, if possible, or fix up a mirror.

CHAIN-DRIVE ZENITH-BRADSHAW.

VEHICULAR TAXATION.

Sir,—"3½ Triumph's" letter caught my eye chiefly on account of its rationality. How good of him to allow the kiddies to own such road-racking monsters as toy motors, tricycles, scooters and roller skates, and to think of charging them even less than he is charged for his little Triumph. Surely other readers must acknowledge his generosity!

Bury. DISGUSTED.

[This is one of half a dozen or so letters signed "Disgusted" by readers who have evidently taken our original correspondent's suggestion too seriously.—ED.]

Books & Maps for Motor Cyclists.

Paper Boards. Price, 2/6. By post, 2/9.

"THE MOTOR CYCLE" ROAD MAPS.
Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

Ealing and District M.C.C.

The third Brooklands meeting is being held on Saturday, the 29th inst., when races will be arranged for motor cycles, three-wheelers and cars. Entry forms for any of these events and particulars of membership may be obtained from Mr. E. H. Gordon, 23, West Lodge Avenue, West Acton, W.3.

Wallington and District M.C. and L.C.C.

Motor cycles, sidecars, and light cars up to 1,500 c.c. may take part in a sporting trial which has been arranged to take place next Saturday, the 22nd inst., starting from the "White Lion" Hotel, Cobham, at 3 p.m. Communications should be addressed to Mr. Clifford Bowen, "The Chalet," Woodcote Avenue, Wallington.

Atherton M.C.C.

In spite of the heavy rain which fell during the return journey from Windermere, the reliability trial held on the 2nd inst. proved a great success. All the machines came through without trouble, and the first prize (a shield) was won by W. Morrison (490 Norton), who only lost 4 points. The second prize was won by W. Wood (550 Triumph) with a loss of 10 marks.

Taunton and District M.C. and L.C.C.

Nearly £20 was raised by members at the hospital fête on July 6th by means of "joy rides," and a programme of gymkhana events resulted in the following successes:—*Tilting the bucket:* D. Dawkins and J. Skinner (348 Douglas); *obstacle race:* S. D. Blake (499 Sunbeam) and S. Goodman (499 Sunbeam sc.); *musical chairs:* P. V. Hare (494 Douglas).

Yeovil and District M.C.C.

A non-stop trial over a circular course of twenty-five miles, which has to be covered three times, has been arranged to take place on Saturday, the 29th inst., for the President's cup and silver medal. The run will start near Yeovil, and the course has been selected purposely to obviate the necessity of expert riding and the risk of damaging competing machines. Further particulars may be obtained from Mr. E. A. Wright, at Sherborne, Dorset.

Ilkley M.C. and L.C.C.

Although the speed trials held on the 10th inst. were not favoured by good weather, some creditable speeds were registered. The winners of bronze medals for the fastest times in their respective classes were:—250 c.c. Class, L. Runton (249 Velocette), 42.65 m.p.h.; 350 c.c. Class, L. Runton (249 Velocette), 42.65 m.p.h; 500 c.c. Class, J. S. Duxbury (481 Scott), 68.18 m.p.h.; 750 c.c. Class, J. S. Duxbury (481 Scott), 68.18 m.p.h.; Unlimited c.c. Class, J. S. Duxbury (481 Scott); Sidecars, 750 c.c., W. B. Lee (678 Martinsyde sc.), 39.30 m.p.h.

Coatbridge, Airdrie and District M.C.C.

Bowhouse Brae, near Tankerton, selected for the open hill climb held on the 8th inst., is about one mile long and quite straight, with a gradual rise increasing towards the summit; competitors were timed over a measured half-mile of the stiffest part, with a flying start of 150 yards. The results were:—

275 c.c.—General: J. A. Porter (249 New Gerrard), 30⅘s. Experts barred: W. Kennedy (249 New Imperial), 36s.

350 c.c.—General: J. A. Porter (349 New Gerrard), 30⅘s. Experts barred: H. Drummond (349 Massey-Arran), 38⅕s.

500 c.c.—General: A. H. Alexander (494 Douglas), 27⅗s. Experts barred: A. B. Fairley (494 Douglas), 27⅘s.

760 c.c.—General: A. H. Alexander (494 Douglas), 27⅘s. Experts barred: N. Muir (490 Norton), 28⅘s.

Unlimited c.c.—General: D. S. Alexander (998 Indian), 24s. (fastest time of the day). Experts barred: A. B. Fairley (494 Douglas), 29⅖s.

All three sidecar classes, for 500, 750 and unlimited c.c., were won by A. H. Alexander (494 Douglas sc.), whose time in each class was 34⅘s.

Week-End Club Events.

July 22nd.—Bradford M.C. and L.C.C.—Cricket Match at Castle Howard.
July 22nd.—Kelso and District M.C.C.—Open Hill Climb on Lanton Hill.
July 22nd.—North Wales M.C.C.—Reliability Trial.
July 22nd.—Dewsbury M.C.C.—Run to Blackpool.
July 22nd.—Essex M.C.—Race Meeting at Brooklands.
July 22nd.—South Birmingham M.C.C.—Trial (open to the Midland Centre A.C.U.).
July 22nd.—North London M.C.C.—Hill Climb.
July 22nd.—Middlesborough and District M.C.—Hill Climb (Yearby).
July 22nd.—Wallington and District M.C. and L.C.C.—Sporting Trial.
July 22nd.—Atherton and District M.C.C.—Run to Hoylake.
July 22nd.—Exeter M.C. and J.C.C.—Inter-Club Trial to Weston-super-Mare.
July 22nd.—Weston-super-Mare M.C.C.—Reliability Trial.
July 22nd.—Wolverhampton M.C.C.—Hill Climb.
July 22nd.—Coventry Triangle M.C.—Petrol Consumption Test.
July 22nd.—Newcastle and Northern M.C.—Picnic run to Roman Wall.
July 22nd.—Sheffield M.C.C.—Picnic.
July 23rd.—Eastbourne and District M.C.C.—Breakfast Run.
July 23rd.—York and District M.C.—Run.
July 23rd.—Leeds M.U.—Reliability Trial.
July 23rd.—East London M.C.C.—Picnic at Kweleyha Mouth.
July 23rd.—Coventry Triangle M.C.—Run to Meriden Shaft Wood.
July 23rd.—Exeter M.C. and J.C.C.—Run to Holne Chase and Newbridge.
July 23rd.—Middlesborough and District M.C.—Run.
July 23rd.—Sheffield M.C.—Douglas Vicker's Cup Trial.
July 23rd.—Westmorland M.C.C. Sporting Trial.
July 23rd.—Barrow and District M.C.—Hill Climb.
July 23rd.—Rotherham and District M.C.—Run to Gringley-on-the-Hill.
July 24th.—Essex County and Southend A.C.—Crippled Children's Outing.
July 25th.—York and District M.C.—Run.
July 26th.—Leeds M.U.—Impromptu Run from City Square.
July 26th.—Reigate, Redhill and District M.C.C.—President's Cup Trial.
July 27th.—Mid Bucks M.C.C.—Speed Trials.

Bedfordshire A.C.

In spite of unfavourable weather conditions a united meeting took place on the 9th inst. of the North London M.C.C., Herts M.C.C., and St. Albans M.C., as the guests of this club at Bedford. The visiting clubs, after a short tour of the town, were entertained to tea and returned home at 7.30 p.m.

Aberdeen and District M.C.

A large and representative gathering mustered at Queen's Cross on Saturday, the 8th inst., for the speed trials which took place on that date, the weather remaining favourable until 5 o'clock, when rain began to fall heavily. The trials took place over a measured half-mile, and two classes were run—one open to all members handicapped on the strength of previous wins, and one for 350 c.c. machines, similarly handicapped. Results:—

CLASS I.—1, W. Cheyne (492 Sunbeam), 28.2s.; 2, R. Dempster (499 Triumph), 29.5s.; 3, G. K. Ferres (349 Massey-Arran), 29.6s.

CLASS II.—1, G. K. Ferres (349 Massey-Arran); 2, T. Smith (249 New Imperial).

Sale and District M.C.C.

Delays on the road necessitated an earlier termination than had been at first intended in the midnight run carried out on the 8th and 9th inst. At the start the weather conditions were unfavourable, but an improvement took place after about four hours.

Coventry and Warwickshire M.C.

The 24-hour reliability trial to Torquay and back, for the Golden Goblet, is planned to take place on Friday, the 28th inst. The run will commence at 10 p.m., and is open to motor cycles, sidecars, cycle cars and cars. Entries and other communications should be addressed to Mr. C. W. Faulconbridge, at King's Head Chambers, Hertford Street, Coventry.

Bradford M.C. and L.C.C.

R. T. Cawthorne, riding a 490 c.c. Norton, put up the fastest time of the day in the handicap speed trials on the 9th inst. at a speed of 78.63 m.p.h. Second in the solo class was W. Blackburne (499 Triumph), followed by E. P. Dodd (499 Sunbeam). The sidecar class resulted in a win for J. Calvert (532 Scott sc.), runners-up being R. T. Cawthorne and R. Clay, both riding 490 c.c. Nortons and sidecars.

Oxford M.C.

No freak hills are to be included in the members' non-stop and consistent driving trial, which has been arranged to take place on Saturday, the 29th inst., commencing at 3 p.m. The course includes a thirty-mile circuit to be covered twice, beginning and finishing at the "Lambert Arms" Hotel. Entries must be received by the 26th inst. (Wednesday), and forms may be obtained from Mr. Wilfred Mathews, of 6, St. Aldates, Oxford.

Barrow and District M.C.

Results of the speed trials held recently at Hest Bank Sands are announced as follows:—

EVENT 2: (1), P. Barron (348 Hawker). EVENT 3: (1) J. N. Yates (499 Sunbeam). EVENT 4: (1) H. Jackson (499 Sunbeam). EVENT 7: (1) H. Jackson (499 Sunbeam). EVENT 10: (1) H. Baxter (490 Norton). EVENT 11: (1) H. Baxter (490 Norton).

FIVE MILE RACE.—(1) B. Houlding (349 Matador sc.).

Macclesfield and District M.C.

Heavy rain storms rendered the seventy-mile "Colonial" reliability trial on the 9th inst. even more difficult than was originally intended, but, in spite of this, some very creditable performances were made. Included in the course were the famous hills at Little Slack and Jenkin Chapel, a watersplash at Meerbrook, and about eight miles of unused grassgrown coach tracks, with only about five miles of main road travelling. The winner was B. H. Davenport on a G.N. light car, followed by S. Gleave (490 Norton) second, and J. H. Broadhead (550 Triumph) third. Bronze medals were awarded to R. Carter (499 Sunbeam), G. Holmes (499 Sunbeam), and C. R. Mills (10 Swift light car). W. Taylor, mounted on a 998 c.c. Indian, had very bad luck, as he was forced to retire with magneto trouble within a few miles of home after a good performance.

Redditch and District M.C.C. and Kidderminster M.C.C.

The fastest time of the day in the inter-club speed trials held on the 10th inst. was made by R. Eveson (490 Norton), who covered the 500 yards course in seventeen seconds with a flying start of twenty-five yards. Other results were as follows:

250 c.c.—1, N. Hall (249 O.K. Junior), 22⅘s.; 2, F. Robbins (249 Triple H), 23⅕s.

350 c.c. CLASS.—1, N. Hall (292 O.K.), 18⅖s.; 2, T. Featherstone (349 A.J.S.), 19⅕s.

TWO-STROKES UP TO 350 c.c.—1, F. Robbins (249 Triple H), 23⅕s.; 2, A. Salway (292 O.K.), 24s.

600 c.c.—1, R. Eveson (490 Norton), 17⅕s.; 2, N. Hall (292 O.K.), 18⅖s.

UNLIMITED.—1, R. Eveson (490 Norton), 17s.; 2, N. Hall (292 O.K.), 19s.

UNLIMITED SIDECARS.—1, R. Eveson (490 Norton sc.), 20⅗s.; 2, H. Perrey (770 B.S.A. sc.), 21⅖s.

CURRENT CHAT

Times to Light Lamps.

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

Motor Cycles at Goodwood Races.

Special arrangements have been made by the A.C.U. for the parking of motor cycles at the Goodwood race meeting.

Disabled Drivers' Motor Trial.

To-day, Thursday, an evening trial over a course of about thirty miles, starting and finishing at Thames Ditton, will be contested by ex-service drivers all of whom sustained some disablement during their war service.

"Road Mending in Progress."

A correspondent writes to say that the road through Denbigh to Rhyl at Llandegla Village is at present under repair for about a mile. He adds that the repairing process is very slow, and is being carried out with the assistance of large, loose stones, which are entirely innocent of the attentions of any steam roller.

Motor Cycles in France.

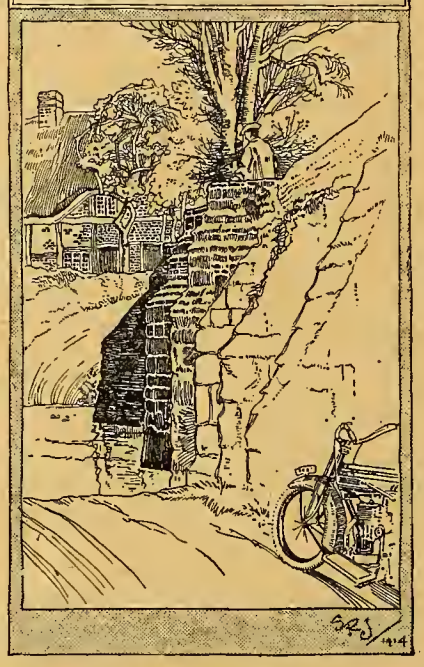
In 1921 the total number of motor cycles registered in France was 42,864, while in 1920 there were 50,783 registered. It is thought that the reason for this falling-off in the number of motor cycles is due, not to any lack of popularity of this form of locomotion, but to the fact that in France the cycle car is becoming a serious competitor to the motor cycle and sidecar.

A New Term.

The Motor Cycle originated the term "flat twin" as an easily remembered title for the horizontally-opposed twin cylinder engine—and it caught the popular fancy. Now we are constrained to suggest, more or less seriously, the term "split-single" for engines having two cylinders with a common combustion space, like the Garelli, which secured the first three places in the 350 c.c. Grand Prix.

The Next Open Trial.

If it is even approximately as successful as last year's event, the open reliability trial of the North Wales M.C.C., to be held over a sporting but fair course on August 12th, should be well worth entering. Entry fees are reasonable—£1 for non-members—and the prizes are valuable and numerous. Particulars may now be obtained from the secretary of the event, Mr. L. Stanley Jones, 1, Ruthin Road, Denbigh, N. Wales.



Mid-week London Trials Sought.

Several London motor cyclists complain that there is no Metropolitan or district club that organises competitions at any other time than during the week-end. For the benefit of those whose business permits mid-week leisure only, can any club secretary refute this suggestion?

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday 4d.

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Special Features.

THE GRAND PRIX. RIGHT-HAND SIDECARS IN GREAT BRITAIN.

Misuse of the Highway.

Scotland Yard has issued an edict pointing out that the use of the highway for sports and purposes other than bona-fide travelling has no legal sanction. Obstruction or disorder arising from events of this nature is particularly to be avoided.

5 m.p.h. an Excessive Speed!

Speed limits of 6 m.p.h. on the straight and 4 m.p.h. when turning corners are being considered by the powers that be in the island of Alderney. Single-geared solo machines may soon, we imagine, be at a discount in that part of the world.

Welsh Open Speed Trials.

The famous course on Pendine Sands has been chosen for holding open speed trials on Monday, August 7th. Entries closely definitely on Saturday, the 29th inst., and forms, together with further particulars, may be obtained from the West Wales Centre Secretary, Nelson Hotel, Carmarthen.

Scottish Speed Championships.

Races of 10 miles for the 250 c.c. class and 20 miles for the others will be included in the Scottish speed championship event on the West Sands, St. Andrews, on Saturday, the 29th inst. The meeting, which is being held under the auspices of the Scottish Auto Cycle Union, will start at 10.30 a.m.

Unusual Police Activity.

By every post we receive from readers cuttings from local newspapers describing police court proceedings against motor cyclists. Usually the fines do not exceed 30s. or so, but at Horsham recently the amounts varied from £5 to £10. The reader who forwarded the information in this case characterises the treatment accorded to some as abominable. After perusing columns of report, we agree. Horsham should be avoided.

The Phantom 500-Mile Race.

According to a London evening paper of Wednesday of last week there was to have been fought out at Brooklands last Saturday "what is (not even excepting the Tourist Trophy) the most arduous test of machine and man in the motor cyclist's calendar—the annual 500 mile race." Half a column was devoted to comments on the riders who were to take part—several were mentioned by name—and the article concluded by advising readers to make their way to the Weybridge track about midday on Saturday, when they would be in plenty of time to see the closing stages. As a matter of fact they would have exactly ten weeks to wait!

Next Saturday at Brooklands.

Three motor cycle races are included in the programme of next Saturday's Brooklands meeting of the Essex M.C.

Sudden Fame for Bristol Rider.

Coincident with his several successes at Brooklands on Saturday, S. G. Watters, a Bristol Norton rider, has just been awarded one of the only two solo gold medals in his local club's recent contest with the Bath M.C.C.

Alms Hill in a Trial.

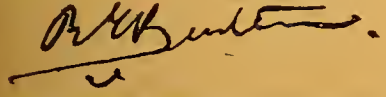
Alms Hill, near Henley, reputed to be steeper than 1 in 3, was on Saturday included for the first time in an important reliability trial. Although by no means in its worst condition, it was the means of failing 90 per cent. of the entry.

Lady Aspirant to Long Distance Records.

It was the intention of Mrs. Janson, the well-known lady motor cyclist, to attempt the "double-twelve"—an authorised substitute for the twenty-four hours—record early this week on a 350 c.c. Trump-Jap. Her attempt was to have been coincident with S. F. Edge's run for the same record on an A.C. car.

Sensible Classification.

In the programme of last Saturday's South Midland Trial (described on page 108), machines were designated by their cubic capacities instead of horse-power ratings, *i.e.*, "490 Norton," "550 Triumph," "247 Levis," etc., thus following the lead set by *The Motor Cycle* some weeks ago.



Whose signature is this? If the writer cannot be traced before the 1st of August the Edinburgh M.C. will hand over to charity the first prize of its guessing competition on the Scottish Trials.

Echo of the Arbuthnot Trial.

To the list of medal winners in the Arbuthnot Trophy must be added the name of Sub-Lieutenant J. B. Heath, R.N. (976 Brough Superior). The reason his name was omitted from the official list was that he was originally No. 21, but he lost this number and attached 31 to his machine, hence there was some confusion in recognising him.

International Six Days Trials.

Entries for the International Six Days Trials closed at ordinary fees on Saturday last, and will close at double fees on the 22nd inst. At the time of writing, forty-two entrants have sent in their names, and so far as riders are concerned five countries are represented: England, Switzerland, France, Holland, and Sweden. Three teams have entered—Switzerland, holders of the Trophy; England, to be represented by A. Bennett (Sunbeam), F. W. Giles (A.J.S.), and G. S. Davison (Levis); and Sweden, represented by B. Malmberg (500 Husquvarna), G. Göthe (500 Husquvarna), and E. Westernberg (1,000 Husquvarna sc.). The trials start on August 3rd.

Curious Calculation.

Extract from a recent Brooklands programme:

Weatherell ...	71×88 mm.=350 c.c.
Sheffield-Henderson	71×88 mm.=348 c.c.
Ruscoe-Blackburne.	71×88 mm.=347 c.c.

Under Happier Circumstances.

A correspondent reminds us that the Belgian-German frontier during the war ran at a distance of about one kilometre from Francorchamps, near the Belgian Grand Prix course, and troops on their way to occupy the Rhine towns after the cessation of hostilities presumably marched along what is now the course for the races.

Where are the Best Riders?

In view of the fact that very few of the competitors in last Saturday's trial in the Chilterns got through with anything approximating clean sheets, it would be interesting if a contest were held over the same course open to teams of North Country, Yorkshire, Midland, Welsh, and South-Western riders. Would they beat the local men?

Imports and Exports.

Less than half the number of motor cycles were imported into this country last month compared with May, the number for June being 86.

The uncertainty of trade conditions is shown by the extraordinary ebb and flow of the export returns month by month. Instead of a steady upward curve, as we should like to see, the tell-tale graph depicts erratic ups and downs, like a barometrical chart of changeable weather. Last month the value of exports was down by nearly £30,000 compared with May.

Road Warnings.

It is important that motorists strictly observe the speed limit of 10 miles per hour through Redhill, Reigate, and Crawley, states the A.A. Special caution in regard to the speed limit is also necessary when passing through Farningham (Kent).

Brighter Brooklands Programmes.

For the more or less humble sum of one shilling the programme of a Brooklands meeting has not hitherto provided much really readable matter. In the most recent issue, however, a new feature was started—"Brooklands Celebrities," illustrated. The first subject was Lieut.-Col. R. N. Stewart, an outline of whose wonderful war record will come as a surprise even to those who know him intimately.

"Excellent Reason for Selling."

The motoring advertisement columns of the lay Press frequently contain delightful fragments of unconscious humour, but a specimen gleaned from a recent provincial weekly newspaper shows what a car really can do if put to it. The owner is anxious to dispose of a "five-seater, lovely condition, any trial, cheap to clear," and amongst other qualifications its petrol consumption is stated as 30 gallons to the minute. It is hardly surprising that the vehicle is for sale!

First Swiss Grand Prix.

Motor cycles, solo and sidecar, from 250 c.c. to 1,000 c.c., competed in the Swiss Grand Prix this year. In the heavier machines Boisetti was the winner on a 998 c.c. Harley-Davidson, Sperdel finishing second on a Motosacoche. In the 500 c.c. class many incidents occurred first place eventually being won by Lavanchy on a Douglas, with Meylan (532 Scott) second, and another Scott third. Heusser (Condor) won the 350 c.c. class, being the sole survivor out of six entrants; and the winner of the 250 c.c. class was Trezza on a Moser, second place being gained by Jean, riding a Condor.

How to get to the Belgian Grand Prix.

Motor cyclists intending witnessing the Belgian Grand Prix, which is to be held at Spa on Sunday next, will find that the most convenient way of taking a motor cycle over to Belgium is to travel by the G.E.R. service, leaving Liverpool Street at 8.40 p.m. The steamer arrives at Antwerp at 7.30 a.m., allowing the motor cyclist plenty of time to get his machine through the Customs and make an early start to Spa. Travellers from the Midlands and other parts of England have a train service running in direct communication with the Harwich-Antwerp steamers. For instance, connecting trains leave Liverpool Central at 2.30, Manchester 3.25, Sheffield 4.42, and through carriages are run from all these places. There are also connections with Stafford, Burton-on-Trent, Derby, Leicester, Melton Mowbray, and Nottingham.

Last year the road from Antwerp to Spa was mostly in very good condition, the route being through Diest, Aerschott, and Liége, about 150 miles. Visitors can only leave Belgium on the Sunday night by the G.E.R. boat sailing from Zeebrugge at 11.15 p.m.

TWO CYLINDERS—ONE CONNECTING ROD.

Details of the Garelli Motor Cycle which secured First, Second, and Third Places in the Grand Prix 350 c.c. Class.

IN view of the triumph of the Garelli machine in the 350 c.c. Grand Prix some details of this Italian two-stroke cannot fail to interest our readers.

The engine follows similar lines to those of the old Lucas two-stroke, which, as some readers of *The Motor Cycle* will recall, was fitted to the Valveless car. In appearance the power unit is extremely neat and in many respects sets an example which British manufacturers could follow with advantage. We refer chiefly to the manner in which the magneto is housed and to the unit construction of gear box and crank case.

Common Combustion Head.

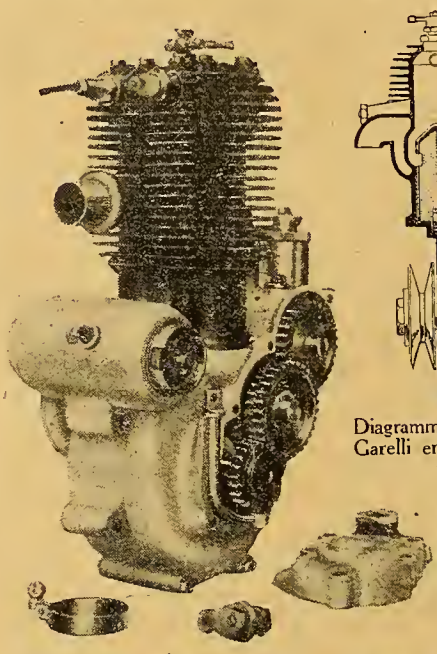
The two cylinders (50 × 89 mm.) are arranged transversely across the frame, with an air passage between them; they have a common combustion head. The two pistons are connected by one gudgeon pin and transmit the power by a single connecting rod.

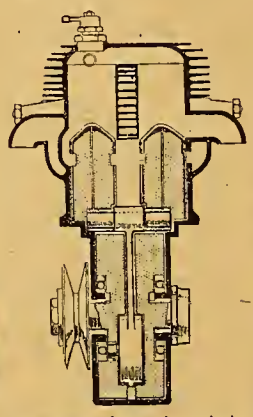
Primarily induction is *via* the crank case in the usual way, and it is controlled by the right-hand piston. The gas transfers at the bottom of the left-hand cylinder through a ring of ports in the wall, and the burnt gases make their exit through ports uncovered by the right-hand piston. Only one sparking plug is used, and the impulse effect is identical with that of a single-cylinder two-stroke engine of the conventional type.

Technical Details.

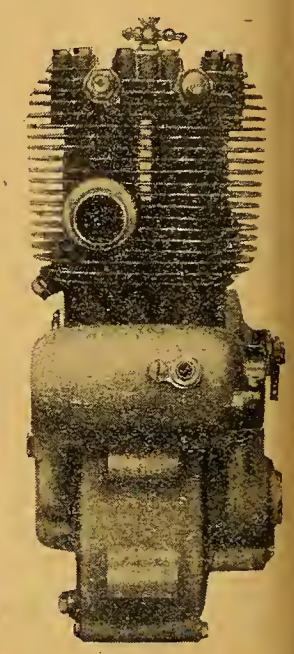
A ball bearing of large diameter is employed in the connecting rod, this being somewhat unusual. The crankshaft itself is also mounted unconventionally, for the shafts float in compression-tight glands, the crank discs being carried on ball races mounted on fixed flanges formed on the base chamber walls.

In the case of the racing machines used in the Grand Prix the particular type of Zenith carburetter employed had two vaporising chambers, one for each cylinder and a common float chamber.





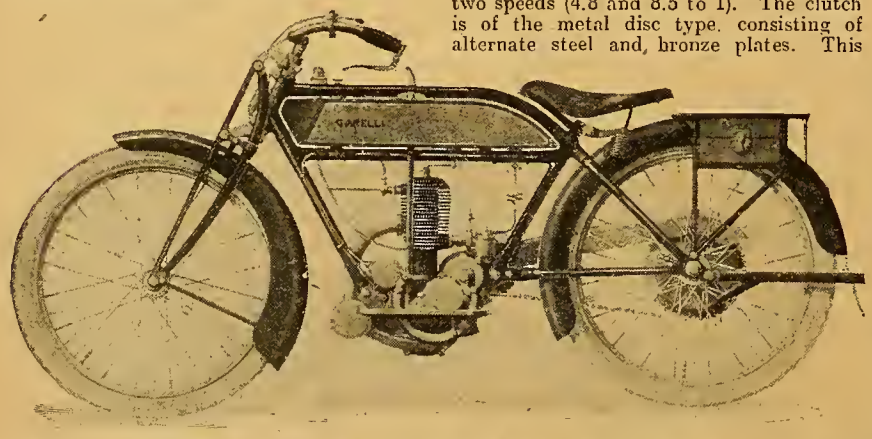
Diagrammatic section of the Garelli engine, showing the two pistons mounted on a common gudgeon pin and the single connecting rod. Observe the common combustion chamber.



Side and front views of the Garelli engine, showing the enclosed Mea-Garelli magneto and the change speed gear.

Another interesting feature of the machine is the arrangement of the Mea-Garelli magneto, which is cylindrical in shape and is carried in a housing, forming an extension of the crank case. The use of this type of magneto on a two-stroke engine is to be commended, since the ignition range is controllable by rotating the magnets in relation to the armature, and not merely by turning the contact breaker cams; by this method the full efficiency of the magneto is obtained at any degree of retardation. A similar extension on the other side of the crank case encloses the clutch and gears, giving two speeds (4.8 and 8.5 to 1). The clutch is of the metal disc type, consisting of alternate steel and bronze plates. This arrangement allows the use of but a single chain, which runs at low speed.

The Garelli is manufactured by La Societá Anonima Moto Garelli, 287, Casella Postale, Milan, Italy.



The complete Garelli touring model motor cycle, which closely resembles the sports model on which the 350 c.c. class in the Grand Prix was won, the chief alterations being in the handlebars and the special double vaporising chamber carburetter fitted.

WELL-KNOWN MOTOR CYCLIST IN FATAL AIR CRASH.

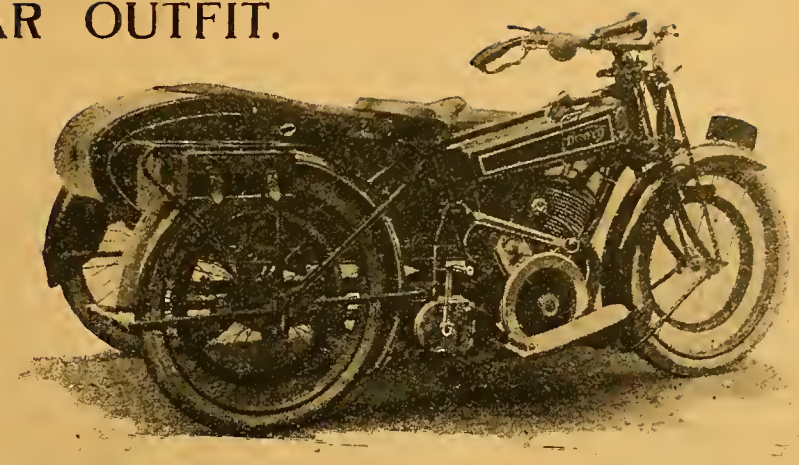
WE regret to record the accidental death of Mr. P. J. Evans, of Birmingham, when returning from the Grand Prix by the aeroplane which crashed last Sunday. Mr. Evans accompanied *The Motor Cycle* staff to Strasbourg to witness the motor cycle Grand Prix, and stayed over to see the car races of last Saturday and Sunday. The winner of the first Junior Tourist Trophy in 1911, "P.J.," as he was known to his friends, keenly followed motor cycle racing, and made a practice of presenting handsome souvenirs to those who made fastest laps in such events as the T.T. and Grand Prix. When the present writer took leave of him at the conclusion of the motor cycle event at Strasbourg he was shown a silver cigarette case intended for the rider who made the fastest lap—Herbert Hassall being the fortunate one.

The late Mr. Evans was well known as a successful motor cycle agent in Birmingham, which city — and the pastime generally—loses one of the staunchest supporters of the motor cycle movement. He leaves a widow and family, to whom our deepest sympathy is extended.

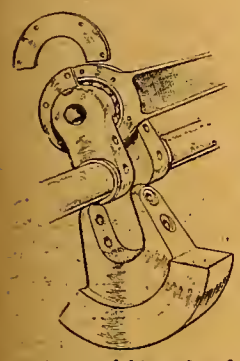
A £100 SIDECAR OUTFIT.

Revised Dunelt Model.

AFTER seven months' hard work on last year's standard model Dunelt, we were thoroughly satisfied with the performance of the big two-stroke for all-round sidecar work, and consequently it was of peculiar interest to us to take over the new £100 model for a road test during the past week. The only noticeable change from the earlier model is that interchangeable wheels are no longer fitted, though all wheels are quickly detachable, and our road experience showed that the latest £100 model is an improvement rather than otherwise on the type which we possessed.



Externally the utility Dunelt sidecar outfit differs little from last year's model; simplicity is a great feature of this machine.



A new type of big end is fitted to the £100 Dunelt. The connecting rod is threaded over the crankshaft; the rollers are inserted through a groove and retained by riveted plates, the balance weights being bolted to the crankshaft after assembly.

NEW ENGINE DETAILS.

Relieved sides are a feature of the latest type of Dunelt piston; this construction leaves slipper surfaces on the thrust sides.

In the power unit, the only material alteration is that the split roller big end has been discarded in favour of a single row race threaded over the solid crankshaft, the balance weights being attached after the big end unit has been assembled. In addition to this the piston has been modified to some extent, the sides being relieved for practically the full length of the working piston, leaving a kind of slipper upon the working surfaces only. The extreme simplicity of this big two-stroke outfit is exactly what is required by the comparative novice, and there is little that can possibly go wrong. The 85×88 mm. two-stroke engine with its double diameter piston shows no signs of overheating under normal use, and the machine is extremely comfortable to ride. Long wheelbase and special design of fork minimise road shocks to a great degree; comfort also is a feature of the sidecar, which has a long and roomy body with a large locker at the rear capable of containing a two-gallon can of petrol in addition to quite a reasonable amount of luggage.

UNCERTAINTY REGARDING THE ANGLO-DUTCH TRIAL.

AT the moment of going to press we are advised by the A.C.U. that the Competitions Committee has abandoned the Anglo-Dutch Trial, which was scheduled to take place on the 29th of this month. We understand that no British team has been selected owing to difficulties experienced by the A.C.U. in obtaining regulations and details. Coincident with this intimation from the governing body we have received the following very definite programme from Holland, as well as a complete team nomination.

"On Friday, the 28th of the month, at 6.15 in the morning, the English team will arrive at the Hook of Holland, there to be met by members of the organising committee and by representatives of the Rotterdam M.C.

"An hour and a half after arrival in Holland the team will start away from the Hook, *via* Monster and Loosduinen, to arrive at The Hague at 8.30 for breakfast. At 10 o'clock the party will leave for Utrecht, passing through Leyden and Woerden. After lunch at Utrecht a start is to be made at 3 p.m., *via* Amersfoort, Voorthuizen, and Millingen for Deventer, where the night will be passed. Having had dinner, the competing machines will be examined and number-plates will be issued.

"The trial will be a two-day run, starting from Deventer on Saturday, July 29th. The distance to be covered is 285 kilometres (173 miles), through Gelderland, Overysel, Friesland, and Drenthe, finishing at Hengelo. On the second day 240 kms. (146 miles) will be covered, the route leading through Overysel, Gelderland, Utrecht, to The Hague.

"After the trial the official dinner will be held at either Scheveningen or The Hague.

"On the day following the trial (Monday, July 31st) an outing has been planned to the seaside resort of Noordwyk-aan-Zee, where lunch will be taken. After a farewell dinner at 5.30, the British team will be escorted to the Hook for re-embarkation.

From this it will be seen that arrangements in Holland were in a fully advanced stage.

It is to be hoped that the Competitions Committee of the A.C.U. will reconsider its decision, as this annual trial has always been most popular with motor cyclists on both sides of the North Sea.

COLWYN BAY SPEED TRIALS.

FULL results of the Colwyn Bay speed trials, a brief account of which appeared in last week's issue of *The Motor Cycle*, are now to hand.

275 c.c.—1, G. E. Tottey (249 New Imperial), 43½s., silver medal; 2, A. W. Muirhead (249 D.O.T.), 46½s., bronze medal. Special novice award: A. Clotton (249 New Imperial). Special general award: G. E. Tottey (249 New Imperial).

278 TO 350 c.c.—1, G. S. Boston (349 A.J.S.), 36½s., gold medal; 2, J. Cooke (348 Edmund), 37⅗s., silver medal; 3, C. H. Foster (348 New Scale), 40⅖s., bronze medal. Special general award: J. Cooke (348 Edmund). Special novice award: A. W. Holmes (349 Rex-Acme).

351 TO 500 c.c.—1, G. F. Burns (492 Sunbeam), 36⅖s., gold medal; 2, V. E. Horsman (490 Norton), silver medal, and H. N. Gaskell (499 Triumph), 37½s., bronze medal. Special general award: H. N. Gaskell (499 Triumph). Special novice award: O. Jessop (492 Sunbeam).

501 TO 750 c.c.—1, V. Horsman (588 Norton), 35⅖s., gold medal; 2, C. P. Wood (532 Scott), 37⅗s., silver medal. Special general award: E. L. Boston (532.5 Scott).

UNLIMITED c.c.—1, R. T. Cawthorne (490 Norton), 35s., gold medal; 2, H. Langman (532 Scott), 36½s., silver medal; 3, V. Horsman (588 Norton), 36⅖s., bronze medal. Special general award: S. Ollerhead (494 Douglas). Special novice award: O. Jessop (492 Sunbeam).

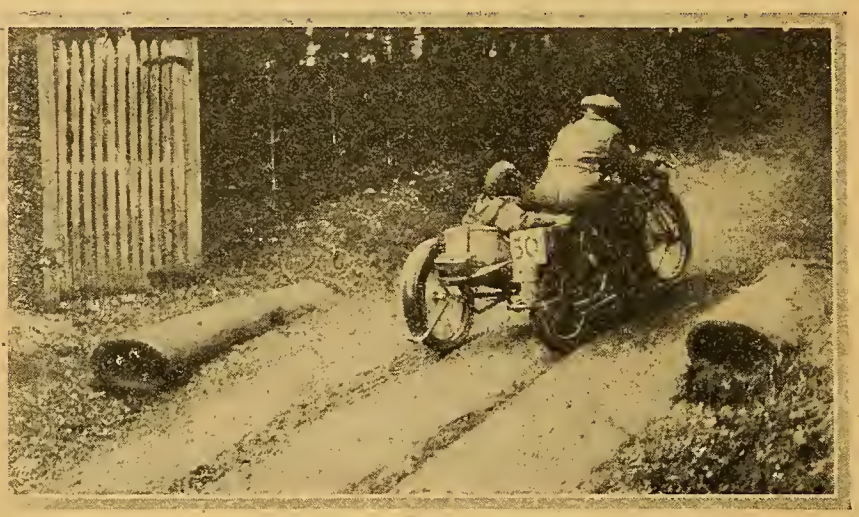
350 c.c. SIDECARS.—1, G. S. Boston (349 A.J.S. sc.), 39⅘s., silver medal; 2, B. Houlding (349 Matador-Bradshaw), 47s., bronze medal.

351 TO 600 c.c. SIDECARS.—1, R. T. Cawthorne (490 Norton sc.), 39½s., gold medal; 2, V. Horsman (588 Norton sc.), 42s., silver medal; 3, S. Ollerhead (494 Douglas sc.), 43s., bronze medal. Special general award: S. Ollerhead (494 Douglas sc.).

UNLIMITED SIDECARS.—1, G. S. Boston (349 A.J.S. sc.), 40⅖s., gold medal; 2, V. Horsman (588 Norton sc.), 41s., silver medal; 3, C. P. Wood (532 Scott sc.) and R. T. Cawthorne (490 Norton sc.), 42⅘s. Special general award: A. Tinkler (999 American X sc.).

SURPRISES IN SOUTH MIDLAND TRIAL.

Centre Event Arranged by Luton and North London Clubs. Chiltern Rivals to the Cotswolds.



After making a faultless climb of the steepest stretch of Alms, H. H. Saddington (662 c.c. James sidecar) came to a stop with wheel-slip near the summit.

IT has generally been considered impossible to plan out a trials course within easy reach of London that would spoil the clean sheets of 90 per cent. of those who attempted to traverse it non-stop.

On Saturday, however, the South Midland Centre event proved that it could be done, and—what is even more important—without introducing any great element of freakishness.

It may be that many of the hill failures or semi-failures were due to a preponderance of genuine private owners in the entry list, coupled with the fact that the Home Counties' enthusiast does not have the same opportunities of perfecting his mountaineering as, say, his North country brother of the throttle lever.

Nevertheless, the South Midland Trial, organised for the Centre by the Luton and South Beds. and North London clubs, could in point of difficulty be compared favourably with most Devonshire, Derbyshire or Yorkshire scrambles. Furthermore, the 68 competitors took what came their way in a thoroughly sporting spirit; forty-eight of them finished and only ten claimed non-stops.

"New" Hills.

Included for the first time in an important trial, Alms Hill, Henley, was responsible for many of the failures, but one or two new discoveries in the neighbourhood of Princes Risborough ran it very close. Main roads were as infrequent as real colonial going was common.

Bradgers Hill, within a mile from the start at Luton, was hardly worthy of observation, but an extremely sticky descent a little further on caused much wobbling among the soloists, and one sidecar, F. H. L. Walker's Zenith-Bradshaw, turned over.

A grass track, fairly dry, near Houghton Regis, was responsible for further uneasiness, and this time E. W. S. Howard (492 Sunbeam) came off, luck more than skill keeping several others upright.

The Henley terror, with its maximum grade of 1 in 3 and its upper surface of wet leaves, was, however, the first real point of interest. At a casual glance it appeared to be in excellent condition, an opinion that was confirmed by *The Motor Cycle* representative when he successfully attempted the ascent himself.

Then the competitors began to arrive. "No. 1," C. Bourlet (498 Ariel) appeared in the distance, drew slowly nearer, wobbled into the ditch and failed; "No. 2," E. W. S. Howard (492 Sunbeam) charged up to "the cannons" at a great speed and skidded to a standstill; "No. 3," C. C. Labin (738 Martinsyde), did not get so far as "No 2." The fourth man, L. P. Walter (550 Triumph), made a moderately clean ascent, and then there was a further succession of variously spectacular, glorious, and rank failures, relieved only by the good climbs of T. S. Sharratt (349 A.J.S.), and C. B. Smyth (493 Sunbeam). W. F. S. Love (490 Norton) also reached the summit non-stop, but with feet dangling all the way. F. G. S. Babb (348 A.J.S.) leapt off the road, machine and all, with such velocity that hitherto unperturbed spectators scurried to the woods for safety.

R. Pugh (499 Triumph) and L. Welch (O.K.) made respectively good and moderate climbs, non-stop in each case; and H. H. Robinson succeeded in footing his Wooller over the worst portion, a meritorious feat of physical endurance repeated later by M. Pearson (550 Triumph).

After an arrow-like flight up the steepest patch, R. Worsley (Scott-Squirrel) attempted either to change gear or to slip his clutch, and he, too, joined the ranks of the fallen.

Lady Does Well.

Just before the sidecars appeared on the scene the only lady competitor in the trial, Miss Bates (499 Triumph), toured up, without a sign of wavering or anxiety,

One of the best ascents of Alms Hill was made by the only lady competitor in the trial Miss Bates (499 c.c. Triumph).

Surprises in South Midland Trial.—

what was now a positive avenue of stationary machines awaiting outside assistance. Her's was a faultless climb.

It was mainly a matter of wheel-grip with the sidecars, and since nobody appeared to have thought of chains it was not surprising that there were six failures before F. D. Chapman (993 Matchless sc.), helped by his passenger on the carrier, was successful. G. D. Johnston (550 Triumph sc.) got creditably far up before he, too, had to vault off and run alongside, and G. Haines (633 Norton sc.) further upheld the reputation of the big single by fully equalling Chapman's performance. The only other non-stop passenger ascents were made by S. Hall on a Morgan and an unnamed late entrant.

Unnecessary Mud-ploughing.

Hills came thick and fast after the High Wycombe lunch stop. Crowell, a weird and wonderful two-level track up the Chilterns, terminating in a slough of mud quite impossible for a sidecar, was climbed by fully half the entry before it was discovered that it had been officially cut out of the route the night before.

One or two enterprising riders found that a detour through the woods avoided the quagmire at the summit, but the majority of the soloists ploughed bravely through the mud with waving legs and staring eyes. During the half-hour we wasted watching the debacle quite the best show was made by R. Pugh (499 Triumph).

Less than five miles further on, Wain Hill proved less freakish, but still a very severe test. Had its half-grass-grown surface been wet probably nobody would have reached the summit. Additionally, it possesses a very acute left-hand hairpin bend and is long enough and steep enough to demand the very best that engine and man can give. T. S. Sharrad (349 A.J.S.), C. C. Labin (738 Martinsyde), H. Reyre (498 Ariel), C. B. Smyth (499 Sunbeam), F. Roberts (598 Indian), W. F. S. Love (490 Norton), F. G. S. Babb (349 A.J.S.), F. C. W. Bennett (292 O.K.), R. Burley (499 Sunbeam), E. F. Shuldon (348 Raleigh), R. Pugh (499 Triumph), L. Welch (292 O.K.), H. H. Robinson (348 Wooler), A. Milward (348 Wooler), F. F. Hickman (550 Triumph), H. Milligan (349 A.J.S.), and M. Pearson (550 Triumph) were among the best of the soloists, but in view of his small engine and high gear, A. Mockett on an Enfield two-stroke deserves special mention.

Only a mile or so from the start, Bradger's Hill was climbed easily by all. H. Reyre (498 c.c. Ariel) coming up in second gear.

Miss Bates, who had been doing so well on a four-valve Triumph, ran into the bank and dislocated her knee—not badly, for she carried on. W. Hardman (993 Matchless sc.) made the least flurried and therefore most imposing sidecar climb, but an un-named Norton rider assisted by a very plucky lady passenger was certainly faster. W. Ridley (1092 New Hudson three-wheeler) also made an excellent ascent.

For half an hour or so there was a lull in the difficulties of the route; then came Gadsden, a path through a wood near Whyteleafe and rumoured to be as steep as Alms. It was not quite; but six hours sunshine was solely responsible for preventing a repetition of the scene at Henley, or worse. As it was, over thirty lost no marks there, mainly the same riders who had distinguished themselves on Alms and Wain hills. H. E. K. Sawtell (Moragn) and B. Bowker (T.B.) were noted as best of the three-wheeler drivers.

Nearer home Aldbury Hill attracted many expectant spectators, but caused few failures. In many ways it resembled Gadsden, and in places it was so dark under the trees that it was almost necessary to light up to pick a safe path to the top. N. B. Beigh (748 A.J.S.) failed, and H. Willis (498 Ariel) and R. G. Hickman (496 N.U.T.) footed. At Dunstable, which, by the direct road, was only 5 miles to the finish, the competitors were led a merry dance through more by-lanes and round further observed hairpins, and, reaching Markyate, thought that the finish was in sight. It was not, by any means, and again it was only the unsporting sunshine which caused disappointment to the crowd on Green Lane—a favourite of the Lutonians, which, that morning, was "quite unclimbable."

Provisionally, the Mid-Bucks M.C.C. wins the Service Shield.

W. E. S. Love (490 c.c. Norton) splashing through a shallow watersplash in the morning's run.

BIG FIELDS AT BROOKLANDS.

349 c.c. Weatherell wins the 100 Mile All-comers' Handicap at Fourth B.M.C.R.C. Meeting

Machines in the 350 c.c. Class on their starting line in the 100 mile handicap, won by R. Weatherell on a 349 c.c. Weatherell fitted with a Blackburne engine.

ALTHOUGH the weather was threatening at midday, it improved considerably during the afternoon, and many of the events in the fourth members' meeting of the British Motor Cycle Racing Club on Saturday last were run off in brilliant sunshine.

In spite of the fact that the first race was the keenly contested 100 mile handicap event for the Mellano Cup, public interest was not what might have been expected, and the number of spectators at the fork was comparatively small.

In the great event of the day, the 100 mile handicap, the experiment was tried of handicapping on distance instead of by time as is the usual practice. Signals for starting were given by maroons, but the competitors took the actual starting signal from marshalls who were stationed at each starting line. The scheme appeared to work quite satisfactorily.

Fifty-four entries were received, and forty-two started.

Stiff Pace in 100 Mile Race

From the very beginning a stiff pace was set, the effects of which began to be felt after the first half-dozen laps by one or two of the less fortunate competitors. G. L. Thompson (349 Weatherell) came into his depot with his magneto swinging loose on the end of the control cable, whilst another Weatherell, ridden by A. W. Hemmings, was delayed with a loose driving chain. Great disappointment was felt when it was noticed that E. B. Ware (1,086 Morgan-Jap) had retired after only four laps with tyre trouble, for his engine was running faultlessly, and his time so far had been excellent.

A number of machines experienced plug troubles. G. H. Tucker (588 Norton) met with bad luck, fracturing his lower tank tube after eight laps in the neighbourhood of 60 m.p.h.

Emerson's Tyre Trouble.

A. A. Swan had only completed three laps on his 249 c.c. New Imperial when he was compelled to retire with a broken inlet valve. F. Thorpe (349 O.E.C.-Blackburne) retired after putting up a good fight for seventeen laps, and J. L. Emerson (494 Douglas) had his chances spoilt by a burst back tyre. He entered his depot smiling good-humouredly, with the cover half off the rim, the tube hanging out and the back wheel wobbling badly.

The result of the race was a decided win for R. Weatherell (349 Weatherell), who certainly deserved his success.

1. R. Weatherell (349 Weatherell).
2. F. A. Longman (349 A.J.S.).
3. H. Le Vack (349 New Imperial).

Winner's speed = 66.64 m.p.h.

A series of three-lap races followed, the first for 500 c.c. solo machines, and some close racing was witnessed, but finally G. McWatters (497 Norton) took the lead and held it, coming in an easy first in the final lap.

1. G. McWatters (497 Norton).
2. C. Volk (496 Douglas).
3. J. Bance (348 O.E.C.-Blackburne).

Winner's speed = 72.15 m.p.h.

Another three-lap solo handicap followed—500 c.c. to 1,000 c.c.—and, as far as speed counts, provided the greatest thrills of the afternoon. Lt.-Col. R. N. Stewart as usual rode his 994 c.c. Trump Anzani, which did so well in the recent Yorkshire Speed Trials at Saltburn, whilst O. M. Baldwin, with his 994 c.c. Matchless, and V. E. Horsman (596 Norton) both looked as though they meant business. H. Le Vack and Kaye Don, mounted on 988 c.c. Zenith-Japs, also made a formidable pair, and J. A. Watson-Bourne (976 Brough-Superior) was not to be disregarded.

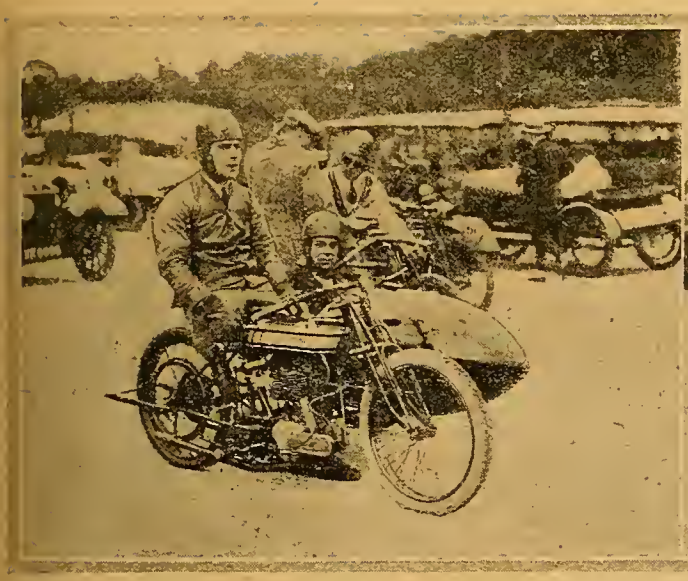
As it happened, the latter had it all his own way over the first lap, although Victor Horsman was not far behind, and O. M. Baldwin's speed was surprising. R. N. Stewart burnt his clutch out in the second lap and had to retire, and Kaye Don was obliged to give it up on account of plug trouble in the same lap. The end of the second lap saw Watson-Bourne still leading, with Baldwin second, and Victor Horsman third.

The race resulted in a close finish between:—

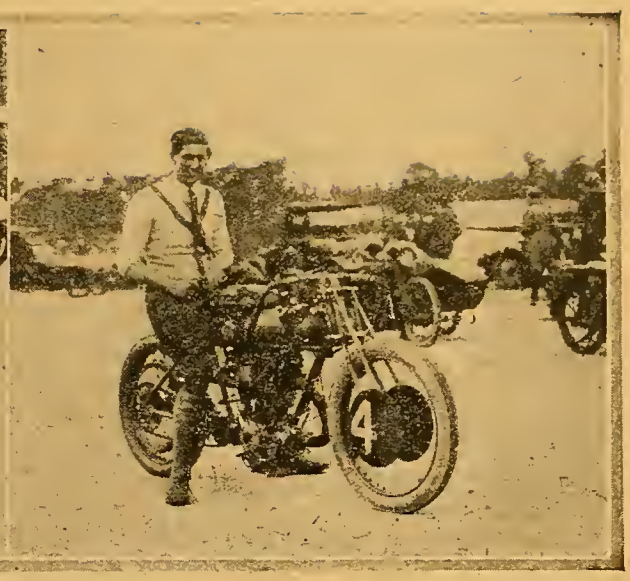
1. O. M. Baldwin (994 Matchless).
2. V. E. Horsman (596 Norton).

Winner's speed = 86.43 m.p.h

Chairing R. Weatherell, the winner of the 100 mile giant handicap, who rode a machine of his own make at a speed of 66·64 m.p.h



A. G. Smith, winner of the private owners' handicap on a 490 c.c. Norton and sidecar.



O. M. Baldwin, winner of 500 c.c.—1000 c.c. 3-lap solo handicap on a 994 c.c. Matchless.

A three lap handicap for sidecar machines not exceeding 600 c.c. formed the fourth event of the afternoon, and in this McWatters again pulled off a first place with his 497 c.c. Norton and sidecar. There were ten competitors. It was an interesting race, A. G. Smith, the one-legged rider, leading for the first lap on a 490 c.c. Norton. He was followed by G. McWatters (497 Norton sc.), and E. Searle (499 Sheffield - Henderson sc.), fiercely struggling for second place. Next were C. Volk (499 Douglas sc.), V. E. Horsman (596 Norton sc.), S. M. Greening (346 Francis-Barnett sc.), and E. A. Bridgman (497 Indian sc.). J. Hill (499 Douglas sc.) met with misfortune in the second lap, having to retire owing to his exhaust pipe coming adrift.

The second lap saw McWatters leading, followed as before by Searle, with A. G. Smith (490 Norton sc.) third, and Victor Horsman (596 Norton sc.) a close fourth. There was considerable excitement, for it was obvious that a keen contest would take place in the third lap between the two leading machines. Unless something unforeseen turned up, it seemed evident that none of the other riders could overtake them.

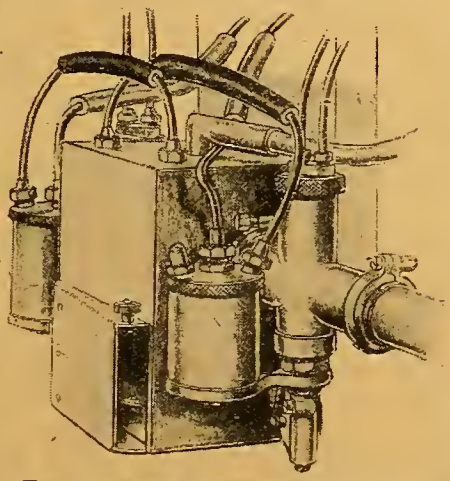
Onlookers craned forward to see who was leading, and at a distance it was certainly difficult to tell. As the pair neared the finishing line, however, there was little doubt as to who was first. McWatters roared past at well over 65 m.p.h. on his Norton, with Searle close on his back wheel.

The results of the event were:—

1. G. McWatters (490 Norton sc.).
2. E. Searle (499 Sheffield-Henderson sc.).
3. A. G. Smith (490 Norton sc.).

Winner's speed = 61.45 m.p.h.

Big twin sidecar and three-wheelers competed in the next race. E. B. Ware (1,086 Morgan J.A.P.) was at scratch, which lost him exactly one lap to the first man round, whilst H. Martin (1,074 Morgan Anzani) only got 27 seconds handicap. 997 c.c. Indian sidecars were ridden by D. H. Davidson, E. A. Bridgman, and W. H. A. Turner, whilst another formidable trio, H. Le Vack, S. E. Longman, and R. Charlesworth, were on big Zenith-Japs. Two 976 c.c. Brough-Superior outfits, ridden by J. D. Marvin and J. N. P. Rowlandson, were favourably handicapped, and from the first lap it was obvious that the race belonged to them; no one else had a chance. Rowlandson easily led every lap, closely followed by Marvin. Ware reached extraordinary speeds with his Morgan, but without avail.



Twin carburetters with variable jets controlled from the handle-bar and a special air-intake are fitted to some of the Douglas racing machines. Caused by the speed of the machine a balanced air pressure is created on the petrol in the tank and in the float chambers

1. J. N. P. Rowlandson (977 Brough-Superior sc.).
2. J. D. Marvin (977 Brough-Superior sc.).
3. C. G. Pullin (746 Douglas sc.).

Winner's speed = 67.10 m.p.h

The last event of an interesting, and successful meeting was a private owners' handicap. McWatters and his all-conquering Norton met with a set-back this time, retiring in the third lap with a flat front tyre; W. H. Sheraton (490 Norton) also gave it up during the third lap; and J. N. P. Rowlandson (977 Brough-Superior sc.) came home with a broken exhaust valve.

After three exciting laps, during which many individual struggles took place, the final lead was gained by A. G. Smith (490 Norton sc.). The results of the race were:

1. A. G. Smith (490 Norton sc.).
2. G. H. Williams (348 Weatherell sc.).
3. R. G. Spikins (1,087 Salmson light car).

IRISH RELIABILITY TRIAL.

FOR reasons which require no explanation, the Dublin and District Motor Cycle Club was not able to issue the list of awards in connection with the open twenty-four hours reliability trial held on June 23rd and 24th, until last week. The awards are as follows:

GOLD MEDALS.—P. H. Hurse (633 Norton), G Briggs (499 Triumph), P. A. Bell (749 James sc.), C. A. Murphy (550 Blackburne), Capt. Cooper (8 G.N.), T. Slevin (249 Humber), J. Healy (550 James sc.), J. T. Cathcart (249 Velocette), J. J. Kidney (550 Triumph), M. J. Doyle (293 New Imperial), S. J. Redmond (998 Indian sc.), R. Murphy (550 Triumph), H. E. Bell (500 James), and G. V. B. Cooke (499 Sunbeam).

SILVER MEDALS.—T. E. Greene (494 Douglas), C. S. Maguire (600 Humber) W. Fagan (596 Indian), J. Browne (494 Douglas), C. D. Maguire (976 Matchless sc.), J. A. Adair (557 B.S.A.), and F. Holmes (976 Enfield sc.).

BRONZE MEDALS.—J. D. Wallis, Junr. (557 B.S.A.), and G. Thomson (500 N.U.T.).

FINISHERS CERTIFICATES WERE AWARDED TO.—T. Woods (557 B.S.A.), J. A. Carville (557 B.S.A.), H. McGarry (994 Ariel sc.), Dr. Broderick (211 Levis), and B. G. D'Olier (293 Hobart).

SPECIAL AWARDS.—Passenger Machine Prize: J Healy (550 James sc.). Passenger Machine under 650 c.c.: J. Healy (550 James sc.). Lightweight Prize: M. J. Doyle (293 New Imperial). Hutchinson Prize (250 c.c.): T Slevin (249 Velocette). Team Prize: H. E. Bell (500 James), P. A. Bell (749 James sc.), and J. Healy (550 James sc.).

CLUB NEWS (continued from p. 103)

Essex M.C.

In order to suit the convenience of a number of members who find it difficult to manage the usual early start, the organisers of the club meeting at Brooklands on Saturday, the 22nd inst., have arranged for the first race to commence at 2.30 p.m. The entries for this event are good, and a full military hand will be in attendance.

Birmingham M.C.C.

Competitions stated to be of a "simple and amusing" nature will be a feature in the Rally at the Greswold Arms at Knowle on Saturday at 3.30 p.m. A speed-judging paper chase will also be included, starting at the George Hotel, Solihull, at 2.15 p.m., and finishing in time to join in the other sports. Entries are free, and the events are open to club members and their friends.

Bradford M.C. and M.C.C.

Considerable public interest was displayed in the handicap speed hill climb for the Dyson Shield on Saturday last, the 15th inst. There were over 60 entries in all, and 50 machines lined up at the start at Tong, near Bradford, the distance of the course being one-third of a mile. The results were:—

SOLO.

1. W. H. Rhodes (998 Indian), gold medal.
2. H. Askham (490 Norton), silver medal.
3. R. Turner (494 Douglas), bronze medal.

SIDECARS AND THREE-WHEELERS.

1. J. Smith (490 Norton sc.), gold medal.
2. R. Clay (490 Norton sc.), silver medal.
3. T. Northwood (Morgan), bronze medal.

The Dyson Shield was won by J. Smith on a 490 o.e. Norton and sidecar, who was given 10 seconds and beat W. H. Rhodes (998 Indian) by about 8 yards.

Cumberland County M.C.C.

A successful picnic, followed by a gymkhana, was held at Moffat on the 9th inst. The weather, although not promising at the start, cleared later, and did not interfere with the event, and thirteen machines turned out for the run.

North London M.C.C.

Members of the North-West London M.C.C. are joining in the annual hill climb next Saturday, the 22nd inst., at Kop Hill, in competition for the challenge cup at present in the possession of this club. The climb is due to start at 4.0 p.m., there being 9 classes with two men from each club in each class.

Bristol M.C. and L.C.C. and Bath M.C.C.

Official results of the inter-club trial described on page 93 have just reached us; the highest possible marks were 244—3 points per mile for 80 miles, plus 4 bonus points for clean ascents of East Dundry and Burledge Hills.

SOLO MACHINES.

S. G. McWatters (490 Norton), 244, gold medal.
W. E. Le Brun (499 Rudge), 244, gold medal.
F. A. Simpson (346 Francis-Barnet), 242, silver medal.
V. Courteney (499 Sunbeam), 223, bronze medal.
E. F. Jellyman (490 Norton), 222.
K. J. Woods (499 Wilkin), 201.

SIDECARS.

G. H. Tucker (633 Norton sc.), 244, gold medal.
H. C. Walters (994 Ariel sc.), 244, gold medal.
F. G. Mann (998 Harley-Davidson sc.), 222, bronze medal.

LIGHT CARS.

A. R. Passey (G.N. light car), 244, gold medal.

The total of the winning Bristol team amounting to 2,330 points, as compared with the 1,806 points of the rival club, giving Bristol a margin of 524 points.

Inverness and District M.C.

Leys Hill was selected for the club's first hill-climb held on the 12th inst. There were sixteen entries, and the competitors were divided into three classes. The length of the climb was one mile. Results:—

UNLIMITED CLASS.

1. K. J. Mackintosh (490 Norton), 1m. 25s., who made fastest time.
2. G. Corsair (398 A.B.C.), 1m. 29⅕s.

UNDER 350 C.C.

1. S. Macqueen (348 G.R.I.), 1m. 33s.
2. J. Inglis (348 G.R.I.), 1m. 48s.

2-STROKE CLASS.

1. W. T. Bullock (225 Royal Enfield), 2m. 37s.

St. Albans and District M.C.C.

A detailed report of the hill climb held on Thursday last, the 13th inst., at Newgate, is now to hand, and results are given as follows:—

350 C.C. CLASS.

1. A. A. Swan (249 New Imperial) and A. Godman (348 Cotton-Blackburne), 14⅕s.

600 C.C. CLASS.

1. C. Dunham (490 Norton), 10⅗s.
2. C. Gordon (499 o.h.v. Triumph), 11⅖s.
3. A. C. Girling (494 Douglas), 12s.

1,000 C.C. CLASS.

1. A. C. Girling (494 Douglas), 11s.
2. C. Dunham (490 Norton) and C. Gordon (499 o.h.v. Triumph), 11⅕s.
4. D. M. Berdnass (490 Norton), 11⅗s.

600 C.C. SIDECAR CLASS.

1. D. M. Berdnass (490 Norton sc.), 15⅖s.
2. C. Gordon (499 o.h.v. Triumph), 16⅗s.

The fastest time of the day was put up by C. Dunham on a 490 c.c. Norton.

A SCOTTISH TEAM TRIAL.

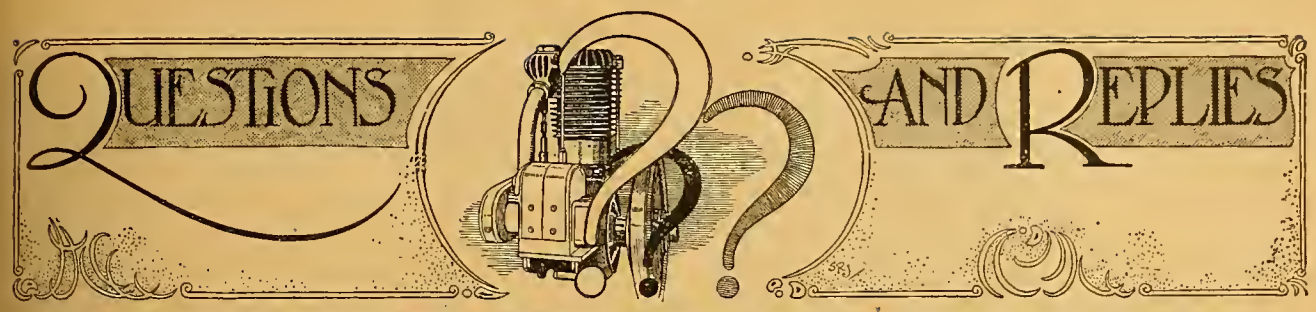
ELEVEN clubs entered teams for the "John Bull" team trial which took place on the 1st inst., organised by the Scottish Western Motor Club. In all there were sixteen teams competing, consisting of four riders each, making a total of sixty-four entrants. The event was won after a close contest by the Falkirk and District M.C., who all completed the 56-mile course without a stop, and with a total time error of only 109⅘ seconds. Details of the winning team are as follows:—W. Sinclair (490 Norton), time error 14⅖s.; A. Climie (349 A.J.S.), 33⅖s.; Mrs. D. Bell (799 A.J.S. sc.), 44⅘s.; A. Neilson (750 A.J.S. sc.), 17⅕s. Runners up, another team of the same club, J. E. Chisholm (498 Ariel), 30⅖s.; A. Howie (490 Norton), retired; P. Armstrong (799 A.J.S. sc.), G. L. Hannah (799 A.J.S. sc.) 7⅘s. All except Howie completed non-stop runs.

The following competitors from various clubs were also successful in completing "non-stops":—R. Spence (499 Sunbeam), A. Smith (499 Sunbeam), J. Cunningham (976 Campion sc.), G. Black (490 Norton), A. L. Downie (498 Ariel), J. Alexander (976 Sunbeam sc.), A. Downie (750 A.J.S.), R. Stanfield (481 Scott), H. Nelson (499 Rudge sc.), G. Hope Wilson (350 Edmund R. and S.), R. M. Cowan (496 Martinsyde), J. Barr (750 A.J.S. sc.), Nos. 85, 61, and 12 of the first Clackmannan team, B. Gold (346 Francis Barnet), J. Caldor (799 A.J.S. sc.), P. Nicholson (550 Triumph), C. C. Taylor (749 James sc.), H. E. Horwood (498 Ariel), R. N. Lockhead (498 Ariel), J. Stewart (633 Norton), J. N. Philips (499 Sunbeam), R. M. Wilson (349 A.J.S.), A. J. C. Lindsay (499 Triumph), W. Romanel (398 A.B.C.), J. Martin (633 Norton), J. Bennie (654 Rover).

Several of the sidecar entrants were disqualified by their passengers being out of their seats; the majority of the failures were recorded at Amulree.

Other clubs competing, apart from the one already mentioned, included Edinburgh and District M.C. (three teams), Scottish Western M.C. (two teams), Clackmannan M.C.C. (two teams), Kilmarnock M.C.C., Elgin and District M.C.C., Glasgow M.C.C., West Fyfe M.C., Perth M.C. (two teams), and East Lothian M.C.

Competitors in last week's 350 c.c. Grand Prix. The leading machine, an Alcyon, is followed by the three Garellis which finished first, second and third.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp) and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

FUELS: NEAT AND MIXED.

(1) What adjustments are necessary to the B.S.A. variable jet carburetter to run on pure benzole and on half-and-half benzole and petrol? (2) Which fuel would be most suitable, and is there much advantage over petrol? (3) Is benzole more or less likely to catch fire than petrol?—G.B.

(1) The variations of your jet are a matter for experiment. The greater the proportion of benzole the more you should be able to cut down the jet size. (2) Probably the best all-round results are obtained from a half-and-half mixture. The use of benzole eliminates knocking and gives smoother running, with improved mileage and power. (3) Petrol is slightly the more inflammable, but from a practical point of view there is no difference.

CONTACT BREAKER ADJUSTMENT.

In overhauling my 350 c.c. Douglas I find that the contact points open twice as much on one compression stroke as on the other; is this usual? The engine fires all right at speed on both cylinders, but when running very slowly in neutral, one misfires.—F.C.

It is not uncommon to find a slight variation in the contact gap in twin cylinder magnetos. The usual cure is to pack up one contact cam with a strip of metal foil or paper, between the cam and the case, when the two are made separately. After carrying out this operation carefully check the timing and see that both cylinders are timed exactly alike. The faulty slow running is more likely to be due to air leaks, probably through a slack inlet valve guide, than to the contact breaker adjustment.

CRANK-CASE HEATING.

New rollers, retainers, and crank-shaft in the big end have been fitted to my 1917 Indian. Also the cylinders have been reground and new pistons and rings fitted. Compression is good; valves and ignition are correct, yet when I have gone about ten miles at about thirty miles an hour the crank-case is so hot that I can only just touch it. (1) Can you tell me the reason for this and how to cure it? (2) Engine will not run smoothly under 15 m.p.h. on top gear, but seems to run free and then jerk badly. I have also a 1916 renovated Triumph. Everything is in good order, and valves and magneto are timed per makers' instructions. Piston rings and compression are good, but the crank-case gets hot just the same as the Indian.—S.C.

There is no harm in the crank-case of your engines becoming hot provided the machines run satisfactorily. It is most probable that extra heat is caused by the new rings and pistons being rather tight; this will cause the oil to get hotter, but as the crank-case is an excellent radiator, it should do no harm.

Important Dates.

Sun., July 23rd—Belgian Gr n rix.
Fri., July 28th, to Mon., Jul 7th—Anglo-Dutch Trial in Holland.
Sat., July 29th, North-Western Centre A.C.U. Open Hill Climb.
Sat., July 29th — Scottish Speed Championships.
Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.
Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.
Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.
Sat., Aug. 12th—B.M.C.R.C. Members' Meeting at Brooklands.
Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.
Sat., Aug. 12th—Motor Cycle Races in Phœnix Park, Dublin.
Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.
Sat., Sept. 16th—The Scott Trial.
Sat., Sept. 23rd—500 Mile Race at Brooklands.
Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

COMPRESSION RATIO.

What is the relational area of "compression ratio," in proportion to the area of the working cylinder? What relationship would you consider best in a first-class make of cylinder? By compression ratio am I to understand the relationship between the space where the gas is compressed between the piston and cylinder end when piston is at its full inward or compression stroke, and the area the gas occupies when piston is at its full outward stroke?—M.C.

The first part of your query is not very clear, but we imagine that you wish to know the proportion of the compression space to the swept volume: this usually is about one-third, which would give a compression ratio of four to one. There is no hard and fast rule for compression ratios which vary with engines of different designs. The normal side-by-side valve touring engine usually has a compression ratio slightly below four to one.

SCOTT CARBURATION.

New pistons and cylinders have been fitted to my Scott, and the machine has done about 300 miles since. Everything was clean when reassembled. Timing of magneto is correct, as advised by the makers, and the oiling and cooling are in order, yet overheating occurs. (1.) Can the carburetter be the cause in any way? It is a Binks 3-jet, and when the machine is moving up to 20 m.p.h. or just over, the throttle barrel is still at the bottom of the main intake; should this be so? (2.) What is likely to prove the best arrangement of jet sizes for solo riding, as at present I am only getting about 50 miles to gallon, and machine is very sluggish in starting? (3) Which are the most suitable plugs: I used to have Reliance, but understand they are not to be obtained now? (4.) What would be the effect on the engine if the rubber rings in the cylinder base were imperfect, as upon taking cylinders off once I found these practically melted away?—L.D.

(1.) The adjustment of the carburetter is probably incorrect, and you should write to the makers for an instruction booklet. (2.) Jets numbered 00, 2 and 7 generally give the best results; you should get about 65 m.p.g. riding solo. (3.) Reliance plugs are now very seldom seen, but you should have had good results with most standard single and three-point plugs under ordinary touring conditions. (4.) If the cylinder base rubber rings are damaged, the engine will not run regularly, as there will be serious compression leakages between the combustion chamber and the crank case, *via* the annular passage in the engine base below the cylinder flange.

READER'S REPLY.

SIDECAR ON SOLO LIGHTWEIGHT.

I would like to ask "H. S." how he keeps his engine cool enough to climb hills in second gear, or whether he has to wait until his engine cools before attempting a climb.

I have a 350 c.c. three-speed Douglas in perfect condition, and my speedometer does not register 5,000 miles yet. I should like to attach a light sidecar, but find that after a run of five or six miles with a pillion passenger I cannot do anything on any fair gradient unless I resort to low gear, for the reason that my engine gets hot and loses power. I don't doubt the machine will take a sidecar if only I could keep it reasonably cool.

L. W. WHITE.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.

"W. P. J." (Liverpool).—293 c.c. single speed Connaught: fuel consumption, speed, general wear.

"O. B." (Beckenham).—29 × 3½ in. tyres on heavy weight outfits, especially Bates and Goodyear.

"S. H. G." (East Ham).—654 c.c. Quadrant, solo and sidecar.

"J. S." (Brockley).—F.E.W. valve attachment on 749 c.c. A.J.S. and sidecar: easy starting and fitting; prevention of leaks in valve guides.

"O W." (Carnarvonshire).—499 c.c. Abingdon King-Dick engine in Coventry Eagle.

"E. N. D." (Stortford).—Weatherell automatic lubrication on 550 c.c. Triumph.

"H. G." (Beaconsfield).—349 c.c. A.J.S. standard sports model.

"W. S. C. S." (Perth).—748 c.c. F.N. and sidecar.

"T. C. B." (Ryde).—349 c.c. A.J.S. sports model: tuning, m.p.h., m.p.g. suitable jet sizes.

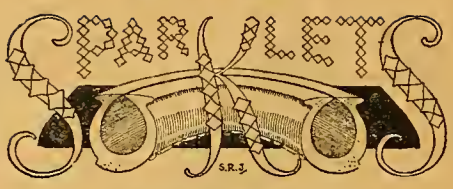
RECOMMENDED ROUTES.

BIRKENHEAD TO PURLEY.—H.C.

Birkenhead, Chester, Broxton, Whitchurch, Gailey, Brownhills, New Oscott., Castle Bromwich, Stonebridge, Kenilworth, Leamington, Bishops Tachbrook, Gaydon, Warmington, Banbury, Oxford, Littlemore, Nuneham Courtenay, Dorchester, Shillingford, Nettlebed, Henley, Maidenhead, Salthill, Eton, Windsor, Staines, Sunbury, Kingston, Norbiton Church, New Malden, Cheam, Sutton, Carshalton, Purley. Approximately 221½ miles.

BIRMINGHAM TO CONSETT.—P.B.

Birmingham, Sutton Coldfield, Bassetts Pole, Tamworth, Nomansheath, Measham, Ashby-de-la-Zouch, Nottingham, Mansfield, Worksop, Tickhill, Doncaster, Ferrybridge, Aberford, Wetherby, Harrogate, Ripley, Ripon, Leeming, Catterick, Scotch Corner, Barton, Stapleford, Darlington, Ferryhill, Durham, Lanchester, Leadgate, Consett. Approximately 242½ miles.



Improved Belt Adjuster.

The patentees of Forbes belt adjuster have recently brought out an improved model which should find favour with motor cyclists. The wearing parts of the adjuster have been case-hardened to provide greater strength.

Spare Parts Reduced.

Since the war F.N. spare parts have been increased 150 per cent. in price, but their cost has now been reduced to 75 per cent. above pre-war prices. The same reduction applies in the case of complete machines: the 748 c.c. four-cylinder being now £125, with sidecar £160, or £153 without hood and screen.

A Consistent Trials Rider.

A rider who is distinguishing himself by steady driving in the big trials is P. L. Mayo (the Coventry Eagle exponent). He is the leading figure on the illustration which appeared at the top of page 73 in our last issue.

High Finish and Low Price.

Circumstances have permitted a considerable reduction in the price of the 496 c.c. 3-speed Lea Francis motor cycle and the price of this model has been fixed at £90, a truly wonderful value for such a highly finished machine. It will be remembered that the M.A.G. 496 c.c. engine is employed with totally enclosed front and rear chains, foot boards, toe shields, and admirable mudguarding.

A Good Record.

To be the winner of every class for solo machines up to 250 c.c. at any speed trials is not a record to be easily beaten. Besides various other successes this was achieved by F. Reynard, of Long Street, Easingwold, on a 249 c.c. Monopole-Jap at Saltburn.

An Error Remedied.

Some time ago a little trouble with sticking contact breaker rollers was experienced in C.A.V. magnetos, manufactured by C. A. Vandervell and Co., Ltd., of Acton, London, owing to an error having crept into the manufacture. This error was corrected as soon as discovered, and no trouble has been met with since, as was testified by the recent T.T. races. Any riders experiencing the trouble referred to above are invited to communicate with the makers.

Reduction in Prices.

As from July 1st the prices of Martinsyde motor cycles, manufactured by the firm of Martinsyde, Ltd., Maybury Hill, Woking, have been reduced as follows: 496 c.c. "sports" solo, £93; 678 c.c. machines—"sports" solo, £110; standard sidecar model, £150; "sports" sidecar model, £145; "sports" solo with "sports" sidecar, £135; solo off standard sidecar model, £120; delivery outfit, £150.

Something for Nothing.

A sample tin of H.M. grade Challenge motor cycle oil will be sent to any prospective customer on application to the Challenge Oil Co., Ltd., Howard Works, Stoke Newington, London, N.16.

A Useful Handbook.

Owners of Bradbury motor cycles will appreciate the latest handbook containing instructions and hints on driving, adjusting, and maintaining these machines, which are manufactured by Bradbury and Co., Ltd., Wellington Works, Oldham.

Current Prices.

Some confusion has recently occurred in the price of two machines which are in the public eye at the present time, the 350 c.c. Raleigh and the newly revived 925 c.c. Clyno sidecar outfit. The former is listed at £68 (two-speed model) and the latter is 158 guineas.

The Roadmaker.

An interesting booklet, comprising about forty pages of instructive reading matter and a number of illustrations, is being published under the title of "The Road Maker," on behalf of the British Reinforced Concrete Engineering Co., Ltd., whose head offices are situated at 1, Dickinson Street, Manchester, and with works at Trafford Park, Manchester.

Details at a Glance.

The firm of R. Weatherell and Co., Ltd., The Terrace, High Road, Kilburn, N.W., manufacturers of the 349 c.c. Weatherell motor cycle, have adopted the novel and very useful idea of embodying in one blue print every individual component of the machine, thus enabling all details to be seen clearly at a glance.

Found on the Road.

On July 9th, near Carnforth, a carburetter float chamber cap, by Mr. W. H. Glover, 47, St. Mark's Road, Preston, Lancs.

On July 10th, between Etchingham and Burwash, by Mr. W. J. H. Bassett, 145, High Street, Sevenoaks, a licence holder containing a licence card for an Enfield sidecar, issued by the East Sussex Licensing Committee on January 5th.

Lightweight Success.

At the Redditch and Kidderminster M.C.C. joint open speed trials on the 10th inst., the 249 c.c. O.K. Junior, manufactured by Humphries and Dawes, Ltd., Hall Green Works, Birmingham, gained first place in the 250 c.c. and 350 c.c. classes, second fastest time with a 350 c.c. machine in 600 c.c. class, and second prize for the two-stroke class, machines up to 350 c.c., was gained with a 292 c.c. O.K. Junior. At Brooklands on July 8th this machine finished third in the 350 c.c. scratch race.

Lubrication Specialities.

Satisfactory lubrication, whether of engines, wheel bearings, or driving chains, is always an essentially important factor. Special attention has been paid to these requirements by the County Chemical Co., Ltd., of Bradford Street, Birmingham, who supply "Chemico" chain lubricants. "Vasol" is prepared for use in bearings. Both contain graphite.

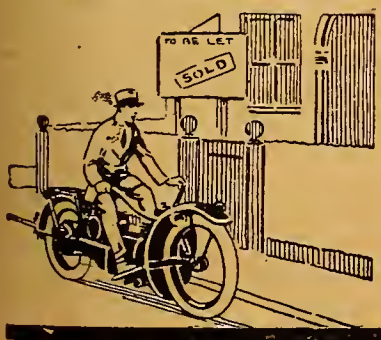
QUALITY & COMFORT SIDECARS

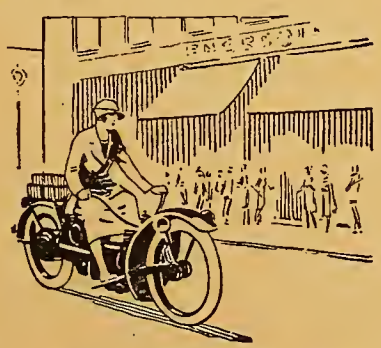
NER-A-CAR
MOTORING ON TWO WHEELS

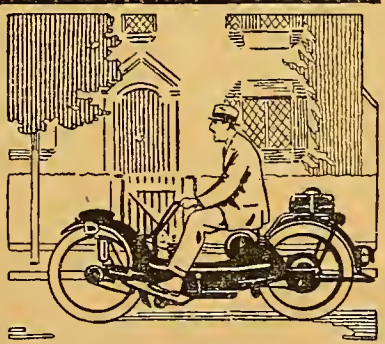
£65
Ex Works.

The Ner-a-Car takes you anywhere without effort, mess or fuss, and brings you back safely, comfortably, "cleanly," quickly. Most men and women need this essential travel help.

The Doctor needs the Ner-a-Car; so does the housewife when shopping or visiting. The Estate Agent or other professional men need the Ner-a-Car every time they go out on business.







The Ner-a-Car does not skid. Is absolutely clean to drive, starts like a car, travels smoothly like a car, and climbs hills easily. Does 80 miles to the gallon—cheaper than 'bus, train or tram.

Write for the Ner-a-Car Catalogue. Learn how the Ner-a-Car gives safe riding in traffic or on greasy roads. See how equally suitable it is for man or woman.

INTER-CONTINENTAL ENGINEERING CO., LTD.,
20, CONDUIT STREET, LONDON, W.1.

Cycles and 3-wheelers are the special care of the C.W.S. Motor Cycle Works, Tyseley, Birmingham. During this season the motor bicycles have

Won hill-climbs and touring tests with ease, because they are a high-class engineering proposition.

See the specification of the "Federation" Motor Bicycle, with its J.A.P. engine and modern design.

If you are interested in the firm that makes the "Federation" Motor Cycle, write to C.W.S. Publicity Dept., Balloon Street, Manchester, for a copy of "The Growth of the C.W.S."

For Kilo & Racing: Order 100 to Circle

THE INDICATOR WITH UNLIMITED SPEED READING.

THE BONNIKSEN ISOCHRONOUS has long convinced the Scientific Rider of its unrivalled properties, viz.:—
It tells the truth at all speeds. Its hands are not confined to one turn on the dial; at 60 m.p.h. the hand will show 10 i.e. 50 plus 10.
Accurate because its "controlling mechanism" is same as in a watch.
No hand oscillation because the indicating hand is locked while reading.

PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

AND GEAR COMBINED

for

2 and 4 STROKE ENGINES

No gear box friction
No grinding noises.
No wheels or pinions to chew up.

The lightest, speediest, and simplest gear on the market for direct belt-driven 2 and 4 stroke engines.

We are now in a position to supply the Philipson Pulley to fit J.A.P. engines without any alteration to the machine or "staggering" of the engine.

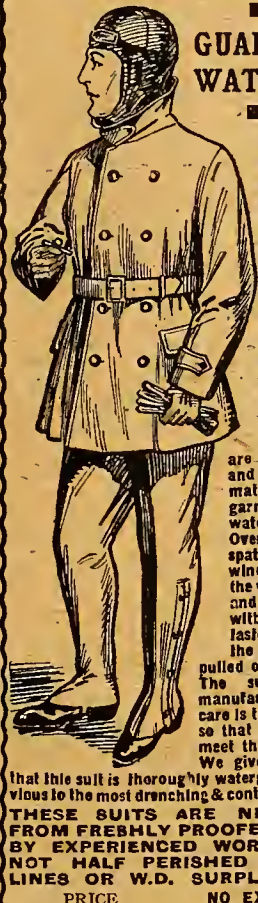
YOUR HOLIDAY

KIT IS INCOMPLETE WITHOUT ONE OF OUR WATERPROOF MOTOR CYCLE SUITS

MOTOR CYCLE SUIT

With Plaited Leather Belt.



GUARANTEED WATERPROOF

SPECIFICATION

MADE from hard-wearing double texture material with an interlining of Rubber. Double Breasted Jacket, with all-round Belt and Leather Buckle, large Patch Pockets, and converted collar to button right up to neck, to fasten with Throat Tab. Wind Cuffs in sleeves. All seams of the Suit are rubber cemented and taped with extra material, making the garment absolutely waterproof. Overall Trousers with spat-shaped leg; wind gussets to keep the wind from the legs and boots; fastened with patent clasp fasteners, enabling the trousers to be pulled off in a moment. The suits are newly manufactured, and every care is taken with details so that the garment will meet the severest test. We give full guarantee that this suit is thoroughly waterproof, and impervious to the most drenching & continuous downpour.

THESE SUITS ARE NEWLY MADE FROM FRESHLY PROOFED MATERIAL BY EXPERIENCED WORKMEN, AND NOT HALF PERISHED CLEARANCE LINES OR W.D. SURPLUS.

PRICE **35/-**

NO EXTRA CHARGE FOR CARRIAGE.

In the Centre of Northern Activity

The North of England Branch

of

The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED,

Head Office: 77, CHEAPSIDE, LONDON, E.C.2

is situated at

Calvert's Chambers 8, Commercial St. LEEDS

Telephone: LEEDS 26283

—a convenient centre for the whole of this busy Commercial District.

Applications for "The Motor Cycle" and "The Autocar" policies are invited from North of England Agents.

These should be addressed to the Leeds Branch, the Manager of which will be pleased to give any information that may be desired.

Every assistance is rendered to agents in securing business and the specialised organisation of the Company is placed at their disposal for the settlement of claims or difficulties.

N.B.—"The Motor Cycle" policy is authorised and approved by "The Motor Cycle," with which The Autocar Fire & Accident Insurance Company is closely associated. The conditions of the policy are complete and comprehensive, and the issuing Company enjoys a high reputation for generous and prompt settlement of claims, and for efficient service to policy-holders at all times.

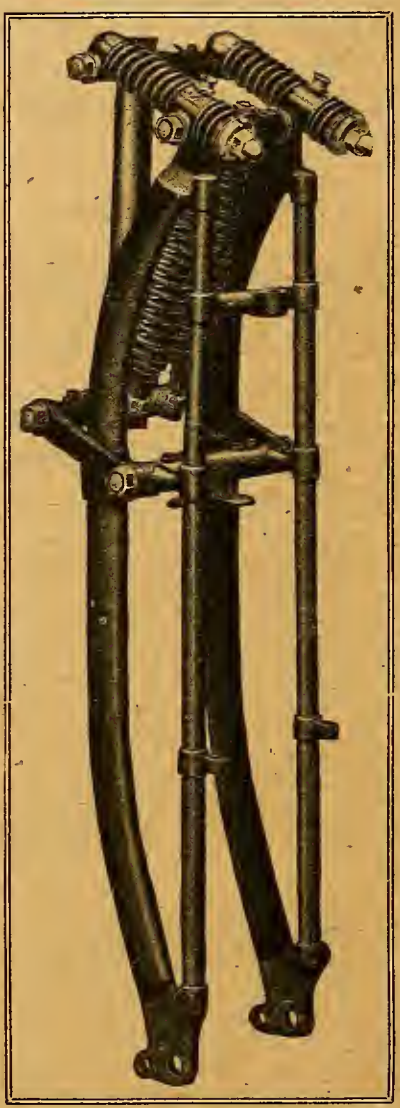
The

BRAMPTON

BI-FLEX SPRING FORK.



Users are unanimous

in their opinion of the Brampton Bi-Flex Spring Fork. The following is an extract of unsolicited letter, dated June 24th, received from Messrs. Theo and Co., Motor Engineers, 6, Hatton Garden, Johnson Street, Liverpool:—

"We may say that our client, Mr. Sutcliffe, informs us that your Spring Forks made a vast improvement to his ——— combination; in fact, he declares that riding is now an intense pleasure, without experiencing the shocks and jars on bad roads, as was the case prior to the fitting of your forks."

For comfort's sake choose a motor cycle fitted with the Brampton Bi-Flex Spring Fork.

Sheen Park Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.
Yours faithfully,
JOHN O. GRIFFITS.

23, London Road,
Leicester.

Gentlemen,
I find the Building you sent me very satisfactory, and consider it very good value for the money.
Yours faithfully,
J. CROSBY

"Alma,"
Alexandra Road,
Cowes, I.O.W.

Dear Sirs,
I have received the Building in good condition and I consider it an excellent piece of workmanship and an exceptional bargain.
Yours faithfully,
L. G. CHINCHEN.

Still Another British Success.

THE Belgian Grand Prix of Sunday last again proved the efficiency and speed of British motor cycles. Once more the machines which won the 500 c.c. and 250 c.c. classes in the Tourist Trophy races and the French Grand Prix were successful, while the 350 c.c. class was won with a British engine.

It may be recalled that the original purpose of the Tourist Trophy event was to provide facilities for British machines to prove their capabilities in competition with those of foreign manufacture. For various reasons the T.T. does not receive the support due to it from riders across the English Channel, and it speaks well for the enterprise of our manufacturers that they patronise the Continental races, on the princip. of Mahomet and the mountain.

Such consistent successes as have been secured by the winning machines cannot fail to impress the whole motor cycle world.

Silencing Racing Machines.

SOME small amount of consternation has been created by the recent Brooklands edict, and its enforcement, anent the silencing of motor cycles.

It appears that complaints have arisen amongst those resident near the track regarding the noise of racing motor vehicles, and the track authorities state that these protests are more particularly aroused by motor cycles and machines with motor cycle engines.

Whether a solo motor cycle with open exhaust creates more actual noise than, say, a 5,000 c.c. racing car with huge "drain-pipe" exhaust arrangements is open to question, but there may be some justification for the grumble when it is recollected that, although perhaps less in actual volume of noise, the sharp crackle of a motor cycle exhaust is, maybe, somewhat more penetrating and irritating to those to whom its music does not appeal.

Whatever the rights of the case, it must not be forgotten that the track authorities have threatened to close the Brooklands course to the B.M.C.R.C. unless better silencing is observed by its members, and as this is an eventuality which would do considerable harm to all concerned, it behoves the offenders to deal with their machines as the occasion warrants. Some loss of power may occur, but it must be remembered that this would affect everyone to an almost equal degree.

One suggestion which we may put forward is that the B.M.C.R.C. specifies for each class a standard capacity exhaust box to be fitted at the end of a long pipe or otherwise as the rider desires. For tuning purposes some part of the track at certain hours might be set aside for testing with open exhaust pipes.

Well supported Trials.

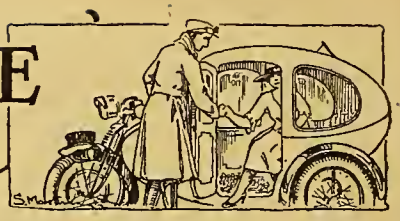
ALL over the country the competition side of the movement is extremely active. Sporting reliability trials are particularly popular, and the practice of confining these events to a half-day, say Saturday afternoon, further attracts the genuine private owner.

As recent competitions have shown, it is possible to map out a thoroughly sporting route within quite a small radius of any of our large cities. Unless really freak tracks are wanted—and they seldom are, nowadays—it is not necessary to go to the moors or the mountains in order to provide an afternoon's rough-riding difficult enough to attract the keenest enthusiast yet not too difficult for the novice.

An index to the advertisements in this issue will be found on the page facing the back cover.

PASSENGER MACHINE TOPICS

by "Friar John"



The Coupé Sidecar with "Solid" Hood: Pierrots and the "beastly hills."

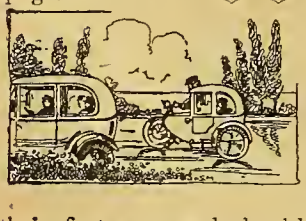
COMFORT for the passenger should be the highest aim of sidecar makers. It is the subtlest form of propaganda. A badly sprung chassis, unyielding upholstery, an ill-designed screen, the absence of a hood in a downpour of rain, can on a trial run damp a woman's sidecar enthusiasm for a long time, and the impression received during a trial run may affect the sale of a sidecar or even an outfit.

Whether Mr. Goad, the maker of the Coupette sidecar, has had experience of this sort or not, the excellent protection he can give with his Coupette sidecar should encourage and produce good business, for it will certainly appeal to the feminine fancy.

Although I was familiar with the design of the Coupette on paper, I had not had the opportunity of criticising the finished article until last week. I went prepared to criticise, because I had seen similar contrivances which had shocked me by their crudity, weight and ugliness, but no adverse criticism was necessary. The Coupette sidecar itself has a pleasing contour, is carried on a well-sprung chassis, and is most comfortable. The upholstery is well padded and sprung. Mr. Goad told me his idea was to produce a fully-equipped and weather-protected sidecar which would appeal particularly to users of medium-powered motor cycles. This he has done, for the sidecar is particularly light and the wind resistance small, even when the hood is in use.

Although he has departed from the conventional, his sidecar does not bear the imprint of improvisation, such as many novelties do. It is a sound and practical job, the rigid hood swings easily into position, and folds back into its recess when not in use, leaving the lines of the sidecar quite clean. This feature is an admirable one. Nothing looks worse than a weather-bleached hood so obviously and aggravatingly untidy when folded out of use. This Coupette sidecar, which is made by Mr. Alfred Goad, 122, Maida Vale, London, W.9, should enjoy a popularity worthy of its undoubted attraction. Photographs are shown on the following page.

◇ ◇ ◇ ◇



IS the sidecar really an uncomfortable-looking vehicle? As an ardent sidecarist I cannot, of course, answer this question. But I have been struck many times by passengers' remarks after their first run, and should imagine that the average non-motor cycling individual *does* really think the sidecar a bumpy, nerve-racking contrivance. "Your sidecar is really quite comfortable, not a bit like I thought it would be," was the surprised remark made to me only last week by a lady well used to car riding, but who had never been in a sidecar, and, strangely enough, the persons who are more used to riding in 'buses and trams than in cars have similar ideas about sidecars.

◇ ◇ ◇ ◇

A READER signing himself "Summer Cyclist," writing on the subject of "Touring Grounds," says, in all seriousness, that I should suggest North Wales as a touring ground. I thought every motor cyclist had been to North Wales. Is there a man possessing the wherewithal to purchase petrol and a night's lodgings who has left unvisited Llanberis and Aberglaslyn? There is! For once I met two men with their wives who had made a bee line for Llandudno or Colwyn Bay, garaged their sidecars and settled themselves down to the pierrots and picture palaces for a whole fortnight, glad in their journeying to have been able to avoid "the beastly hills by taking the flat coast road through Flint and Rhyl."

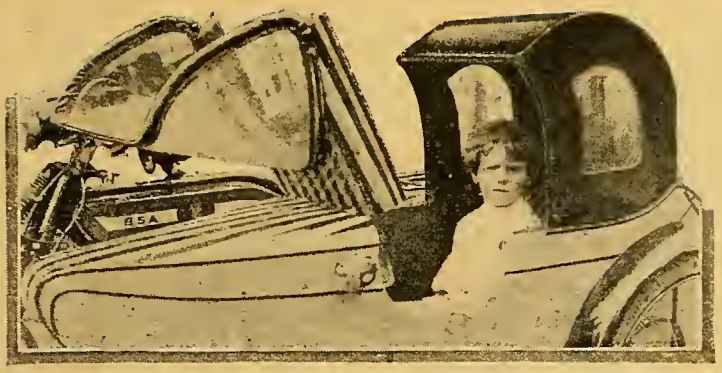
◇ ◇ ◇ ◇

I THINK it must be this kind of person who leaves beer bottles and bits of paper at his various stopping places *en route*. Only last week I pulled up near a spot just vacated by two sidecars and a Ford, and the refuse left on the grass would have disgraced Hampstead Heath on a Bank Holiday evening. This complete indifference to common decency, curiously enough, often goes hand in hand with apathy towards, or inability to appreciate, nature even when she is most sublime.

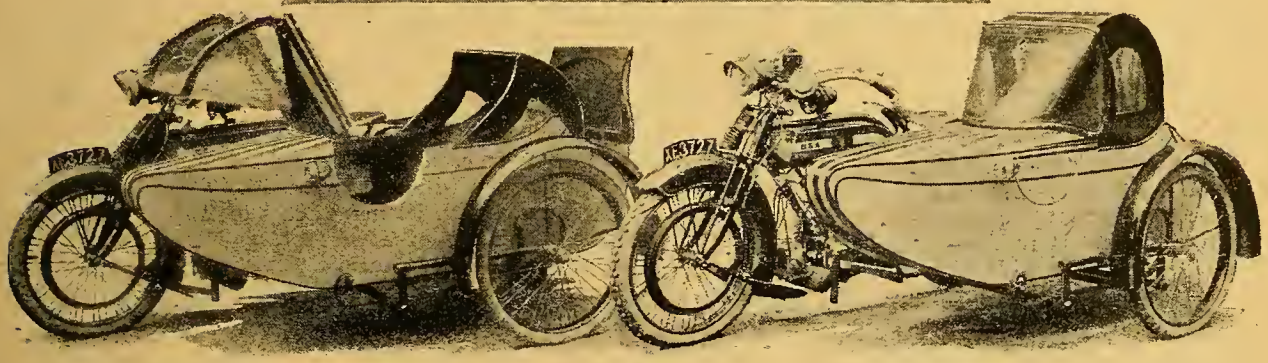
◇ ◇ ◇ ◇

IT frequently happens when deciding on a fairly lengthy tour that the travelling bags are either too big or too small. On my last long tour I abandoned bags and cases altogether except for one on the machine and carried luggage for three in waterproof sheeting, choosing to do this in preference to forwarding parcels on to various stopping places on the road. The method adopted was to make three separate rectangular parcels as big in area as the grid would allow, *each strapped securely* in waterproof sheeting, finally enclosing the three in one large rubber sheet to form a solid rectangular package. It is astonishing what a quantity of luggage can be carried in this way, but don't be mean or careless with the straps.

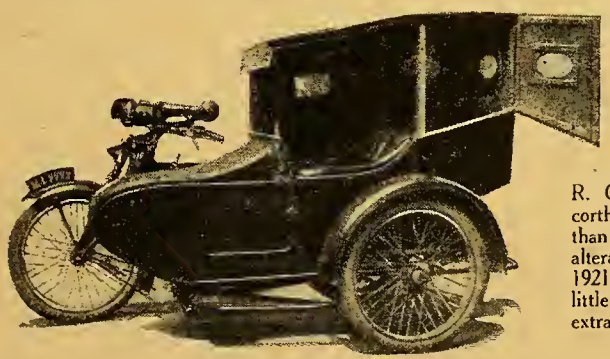
THE CULT OF THE COUPÉ SIDECAR



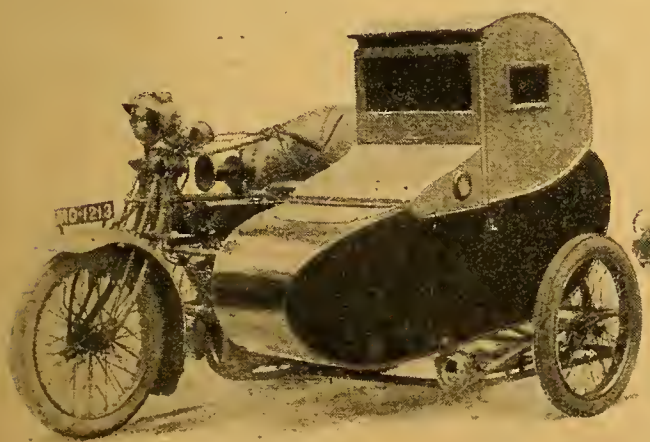
The three upper illustrations depict the "Coupette" sidecar, an exceptionally neat and workmanlike job. It will appeal to owners of medium powered machines, for it is light in weight and its wind resistance negligible. A. Goad, 122, Maida Vale, London, W. 9, is the manufacturer.



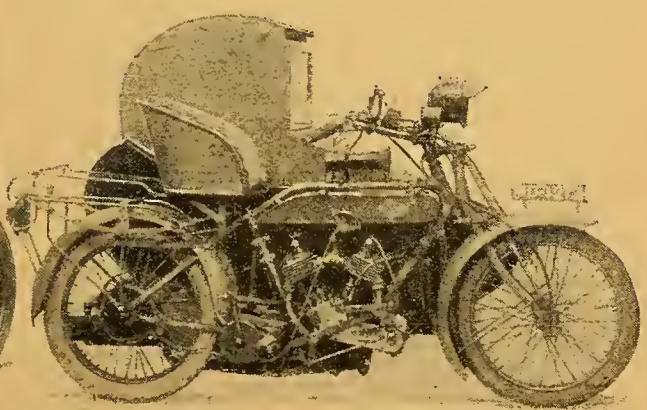
Considerable attention is being paid both by manufacturers and private makers to the all wood or all metal hood. Some of the wooden types fold back, roll top desk fashion; others are solid, like the "Coupette" shown above, and simply pivot backward and forward. The demand for complete protection for the passenger is very insistent in these days, and no doubt when the advantages of this type are better known, the coupé top will become popular, especially with owners of sporting sidecars, the clean lines of which are spoilt by untidy hood sticks and flapping cloth.



A non-collapsible hood of three-ply wood, which extends over the rear auxiliary seat. Although grace of outline may have been sacrificed, R. G. Kerr, of Enniscorthy, says he is more than satisfied with the alteration, and that his 1921 749 c.c. James feels little or nothing of the extra weight and wind resistance.



A "solid" form of hood which can be detached from the body together with the screen. This model is manufactured by P. S. Collyer, 78, Snell's Park, Upper Edmonton.



The maker has thought of the driver's comfort, also, in fitting to the 1922 "Collyer" twin a bucket seat supported on cantilever springs.

Maniacs ?

THERE is an old Roman proverb "*de gustibus non disputandum*," well balanced by the modern North Country maxim "there's nowt so queer as folk." Last week I found myself marooned amongst some strange men whose chief passion in life is a new sport known as "hiking." For the benefit of the non-hiker, let me expound that the hiker goes one better than the snail. The snail carries his house on his back; the hiker goes further, and carries his grub as well as his house. The grub consists of the three essentials of life—bread, beans, and bacon; the "house" is an ex-W.D. ground sheet in which a blanket is rolled—if you are a cold mortal you may also carry a bit of muslin the size and shape of a dogkennel, which is euphemistically termed a tent. We fell to comparing our respective hobbies. Easy fruit, thought I to myself. I held forth eloquently on the red weals produced by the shoulder straps of the pack; of the tedious crawl at which a dull landscape passed over the hiker's shoulder; of the discomfort of sleeping under hedges; of ticks, earwigs, and harvest bugs; of vipers; of lighting fires with wet wood. Believe me, I had none the better of the argument. What those hikers had to say of motor cycling would char these chaste pages. So I won't print it. Philosopher as always, I opine that one man's meat is another man's poison. I tried a 24-hour hike with these eccentrics, and an o.h.v. Triumph was sweeter than ever when I escaped from them.

The First Baby Two-Stroke.

A GENTLEMAN who was prominently associated with the evolution of the two-stroke assures me that the first "baby" two-stroke to take the road in this country was a Levis, which appeared in the early months of 1910. Any rival claimants, please?

The Trewso Leggings.

FOR fussiness in details commend me to two classes of men—the camper, in regard to his entire kit; the keen motor cyclist, in regard to his riding wear. I am going to spend yet another paragraph on the Trewso leggings, because I have in the past both commended them and criticised them. They were—to the best of my belief—the pioneers of the quick-detachable type of waterproof legging, which is so rapidly killing the clumsy patterns which compel you to lie on your shoulders and wave your legs in the air till some kind friend comes along and "skins" your legs for you. Their particular device consists of two spring-steel tongues per leg, one for the calf and another for the shin. You can rip these out of their sockets in half a second with a double motion of the hands, when the garment promptly collapses round your feet, and so does not get soiled internally by the mud on your boots. In the past I found fault because the aforesaid spring tongues occasionally flew out when one was walking about. I have now ascertained that this is solely due to bad fitting; if you give your correct measurements when ordering, this catastrophe will never happen. The latest type is equipped with leather patches to take the heavy wear on the inside of each foot, and the instep security device is a chain, fixed by elastic at one end—quite a clever notion.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

Over-Lubrication in Excelsis.

A READER was duly impressed by the works manager with the advisability of over-lubricating his new bus for the first 1,000 miles. He followed the counsel so energetically that after a couple of months the machine began to run rather badly; and upon examination it was found that the bore of the exhaust pipe had carboned up till there was barely room for a lead pencil to be inserted. Moderation in all things.

A Gap in the Programme?

A GENTLEMAN who is interested in the motor cycle trade is anxious to put up a valuable trophy for open competition, preferably including sidecars as well as solo machines. He desires the trophy to be of the annual challenge variety, and to be awarded for some outstanding feature not adequately covered in the current programme. These conditions are not easily fulfilled, but it is obvious that at present we have no event limited to lady motor cyclists. If any reader has a better suggestion to make, let him send it along to me, and it shall reach the proper quarter.

Observe!

EMERGING from a garage yesterday I met a tall athletic girl, clad in heavy leathers, perspiringly pushing one of the special light-weight machines deliberately designed for the inexpert potterer. Her back tyre was flat, and to judge from its worn condition a further crop of punctures was her inevitable doom. She was of a temperament which is utterly bored by even the most straightforward forms of roadside tinkering, and preferred to risk punctures and push on to a garage when unfortunate, rather than learn how to do a very simple operation for herself. The incident throws into relief the wiser design of the Harper Runabout, which is equipped with both detachable wheels and detachable rims.

To Strasbourg for the Grand Prix

After-Impressions of a Hurried Trip Across France to Alsace.

THERE is more romance in a yacht entering a foreign port than in thousands of miles of cruising round its homeland coast.

The same applies to the motor cyclist who finds himself and his machine through the customs in a foreign land.

Instead of being a mere tourist the rider becomes an explorer; instead of roads, the highways are paths into the unknown. So far the coasts of Great Britain have represented the outposts of civilisation, and it comes almost as a surprise to the motor cyclist on his first visit to the Continent that finger posts, steam rollers, garages, and inns are continued beyond the Channel.

There they are, however, different, perhaps, from the wayside objects of this country, but nevertheless the same old familiar friends.

Driving on the Wrong Side.

First impressions leave a deep mark, and in this connection probably every British motor cyclist who has toured on the Continent retains vivid memories of the first few hours of driving on the right-hand side of the road. On meeting or overtaking traffic instinct tends to cause the driver to do the wrong thing, and on the first day, at least, it is with tensioned nerves that he forces himself to do what is right. When one is occupying the centre of the road and meets an approaching high speed car, also in the centre of the highway, it requires the same amount of will power to draw over to the right, as is necessary when a bicyclist essays to balance a tricycle.

Although I have toured in America, Scandinavia, and France, this preliminary nervousness has always been present. Perhaps other motor cyclists are quicker to adapt themselves to the different rule of the road; in fact, F. G. Edmond, the Triumph rider, asserts that he finds no difficulty in changing over from the left to the right-hand rule, but experiences confusion on returning to this country.

Incidentally, the tourist in a conventional British outfit here finds an answer to the controversy on right or left-hand sidecars. With a sidecar on the left and "keep to the right" as the rule, it is sometimes difficult to see the road ahead when overtaking slower traffic, because it is not until the centre of the road is reached that the driver is able to ascertain whether the way is clear or not.

Such were some of the thoughts which flitted through the mind while speeding towards Paris *en route* to Strasbourg for the Grand Prix. On encountering the *pavé* in the suburbs of Paris, one's thoughts turn to the other matters which concern such things as spring frames and oversize tyres.

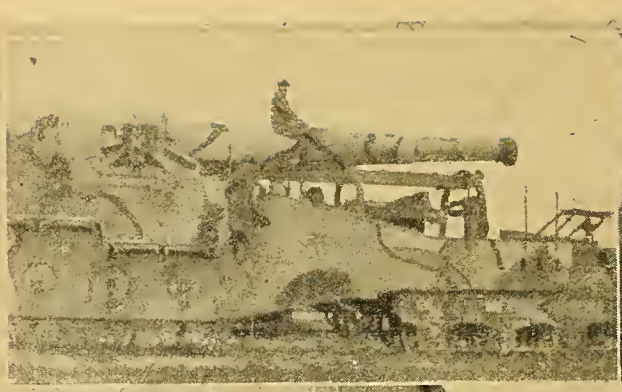
Tucked away out of the whirr of modern life—a Strasbourg fruit market in a courtyard near the centre of the city.

Paris the Real Starting Point.

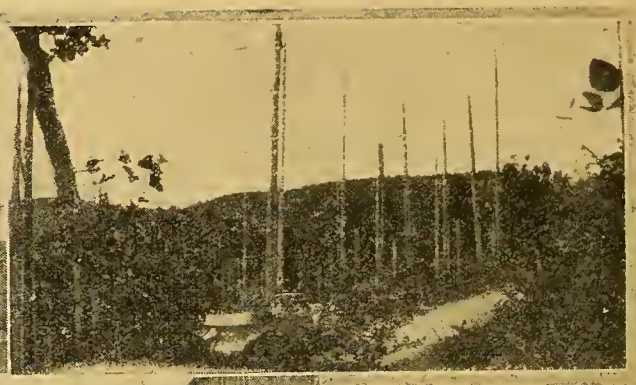
Actually the trip to Strasbourg began at Paris, which gay city was anything but gay as we left it in the very early hours of Monday morning prior to the motor cycle Grand Prix. A southerly course was taken *viâ* Champigny, near which town we passed a race-course where French cavalry were in training, and a fine sight they made at the gallop.

Moderately good roads were traversed all the way to Provins, where a big road race was held last year. Here we began to realise that we were journeying south, and as we sped along on roads which were dead straight for miles on end, both passenger and driver were silent. It transpired at the next stopping place—Sézanne—that each had been occupied by thoughts on the same subject.

In every town and village through through which we passed nearly every house had its wooded-slat shutters closed. It is always so in southern countries, where the principle adopted is to keep out the light and so exclude the heat. But it was not hot; it was not even sunny for fully half the journey, yet on both sides of every road the majority of windows were shuttered. For the first few miles these shuttered windows are just noticed in passing, but after two hundred odd miles of it, they tend to depress the wayfarer and create many morbid thoughts.



One of a large park of big guns which occupies a grass grown siding miles away from "anywhere." A reminder of the Great War.



A natural monument to those who fought on the old Franco-German frontier. The edge of a forest of dead pines in the Vosges.

Archway through which the traveller may enter the picturesque town of Vitry le François.

These notes are impressions; therefore, irrelevant as it may be, I was reminded that fair France has not yet recovered from the war. Somewhere I have read that our cross-Channel neighbour lost 50% of her young men between the ages of 19 and 32. Mere figures, perhaps, but the fact remains very few young men are to be seen excepting in uniform, and, in this connection, it occurred to us that there were a great many more men under arms in France than are to be seen in this country.

"And what has that to do with motor cycles?" asked my companion.

"Everything," was the reply.

Can one expect France to become a big motor cycling country if all her young men are in the army? Can posterity be guaranteed success in commercial life, in the arts or scientific research, if all the young blood is drained into a military machine?

We continued this argument for several miles until the official at the *octroi* on the outskirts of the next town turned conversation into another channel.

Monsieur took a prefunctory glance over the outfit, decided that we were *étrangers*, and waved us on. Had we had cabbages or chickens or even a surplus supply of petrol aboard, we should have had to pay the local duty which is levied on all goods imported by the towns from the country. Incidentally, it is cheaper to buy petrol outside the large towns than within.

Strasbourg recalls the story books of childhood

Those shuttered windows really had got on our nerves, but even this characteristic feature of the French road side failed to make a depressing picture of Vitry le François, where we lunched.

Vitry is a clean little town where everyone and everything appeared to be dozing. The traveller enters it through a beautiful archway, where a motor char-a-banc disputed our right of way. Outside is the blue-green of heavy foliage, and inside the grey town. It is like opening a door in the wall of an old-world garden and finding oneself in the street. That motor coach seemed out of place somehow—certainly it had pneumatic tyres which rendered it silent on the *pavé*, but one felt that such places ought to be visited on foot with a staff and haversack.

In the centre of Vitry is a fountain where the four roads into the town meet, so one cannot pass through without pulling up. We lunched at an hotel which approximated to any English hostelry in a quiet cathedral town, in company with divers persons whose calling in life it was impossible to conjecture. Including the Grand Duchess who lunched ferociously within sight of the chauffeur of her limousine at another table, they all had their counterparts in England.

French Towns.

Leaving the sleepy environment of the square, we took the road opposite to that by which we had entered, and continued our journey towards France's regained province of Alsace.

No wonder the Michelin guide gives a plan of most towns in France. It is such a problem to find one's way through, for if the roads are long and straight, the streets are short and tortuous, and, as a rule, the difficulty of finding the way into the usual centre square is only exceeded when discovering a way out again.

Plan of the square at Vitry showing the four main roads which meet at the fountain in the centre.

More straight roads, more dilapidated country dwellings with

To Strasbourg for the Grand Prix.—

their manure heaps, more shuttered windows, and in due course we arrived at Nancy, where we made a halt for tea.

Regarded as one of France's cleanest towns, Nancy makes a strong appeal. The inevitable square in this case, the Place Stanislas, is enclosed by massive iron gates richly gilded. Two corners of the square are occupied by beautiful fountains, and the words "five o'clock tea" on the flapping front of an hotel canopy suggested that English visitors were frequent.

"More probably American," murmured my passenger. But in America five o'clock tea is practically unknown—but perhaps mine host does not know this.

Behind the Lines.

On the road once more after half an hour's stay we continued our way along tree-lined roads to Luneville, and, as we were now approaching an area which was not far behind "the lines" in the bad days between 1914 and 1918, we had several reminders that cleaning up after a war is a big task. At one point miles away from town or village we saw a large railway siding where on grass-grown tracks lay dozens of heavy guns still in their camouflage paint. Here we came across *The Autocar* editorial party on an eight-cylinder Talbot-Darracq. Our *confrères* had started from Paris several hours after we had left, and by greater speed and better experience of the roads had got ahead. Incidentally, they soon left us again, and we were able to appreciate to the full why the peasants look upon motor cars with disfavour. The dust that car raised was like the spray on Boulogne pier during the gale which was raging on the day we landed. All the roads, of course, are not tar surfaced like our own.

We reached the edge of the Vosges at Badonviller, which town reminded us that we were indeed in a foreign land. From now on the road wound among great forests of pines up the mountains to the Col de Schirmeck, a pass over 2,000ft. high and at times with gradients and hairpins that would gladden the hearts of the Edinburgh Club officials when in search of routes for a Scottish Six Days.

Well-graded Roads.

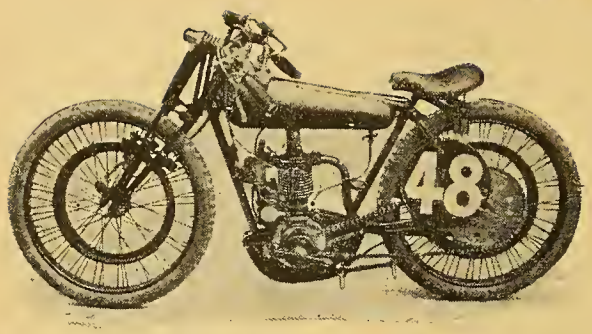
Unlike those in Scotland, however, the road was good but so graded that it covered many miles in comparison to the flight of the crow. I suppose one should substitute magpie for crow in this part of the world, for everywhere on our route we had seen the black and white mischief-makers which are as common as the bullock-drawn farmer's waggon.

Gone now were the straight flat roads and their avenues of top-heavy trees with their great bunches of mistletoe. No longer could we see very far ahead, for hairpin after hairpin followed in quick succession as higher and higher we mounted above the valleys and ravines. Forgotten were the shuttered windows of the plains of France as we hurried on in second and bottom gear amid scenery which has no parallel in Great Britain, for here the trees covered the hills to their crowns.

Scenes Worth Revisiting.

Would that we could have tarried awhile; it is a country which is worth travelling far to see and offering possibilities for a camping tour for any-

In ancient Strasbourg—capital of Alsace, France's regained province—where the 1922 Grand Prix race was run.



The Chauviere motor cycle, built by its owner who competed with it in the 250 c.c. Grand Prix. The frame is a Villiers, and the engine a small four valve unit built up by the rider himself. Direct chain drive is used.

one who loves the grandeur of forest clad mountains.

Surely war could not have disturbed such a peaceful corner of the world? To such a place one would come to get away from the din of the clashing arms. . .

Then round another hairpin and disillusionment. Whole forests of dead trees towered towards the sky with leafless branches and naked trunks bleached white by passing time. Some were shattered at their base and leaned against their fellows. Others lay half hidden in the tangle of Nature's mantle which, as if to cover up the destruction wrought by man, is healing the great wounds made by bursting shells that came across the mountains and forced the Allies' soldiers to seek refuge in the dugouts now visible on every side.

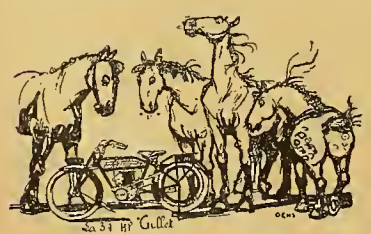
We now fully understood why sidecar outfits were used in the ambulance service on this front, for their mobility on the steep and comparatively narrow roads would be a very great advantage. I tried to imagine a four-wheeler ambulance turning round on these gradients of 1 in 7 with perhaps shells bursting on either side.

We descended into a valley *viâ* an enlarged Inverfarigaig corkscrew which tested the brakes to the full, and then on again upwards for a thousand or more feet with glorious vistas all around, until finally the summit was reached and the descent into Alsace began.

Alsatian Colour Schemes.

What a change! We had indeed entered another country. Instead of the paint-starved grey houses and their heaps of manure, we now saw clean white or cream washed walls, brilliant red tiles, and green painted shutters. Trim farmsteads lay off the road, and, occasionally, an Alsatian costume to add further colour to the scene.

Remembering that this was France's regained province, we wondered whether the new paint was due to an overhauling by the makers or to the usual habits of the people. In only one respect did Alsace appear similar to the France we had left behind on the other side of the Vosges—the expressions on the faces of the people. Everywhere, from the coast to Strasbourg, we noticed it, a sadness reflected even in the countenance of the young. East of the Vosges it seemed to fit the country. For one could not imagine laughter and song where the villages are grey and only the red poppies relieve the monotony of green in the open country. But in gaily-coloured Alsace, with its swift running streams and flower decorated houses, one expected to find happiness and care-free faces, such as one meets in Norway and Switzerland.



In this subtle manner a French company advertises its 3½ horse power machine.

Just an impression perhaps, but then these notes do not aspire to be anything more.

A Fairy Story Town.

In the gathering dusk we approached Strasbourg, and as we entered by roads with smaller and more crooked streets on either hand we were reminded of childhood memories of the place where the storks build their nests on the chimney pots and of crooked houses which for generations have illustrated the fairy stories of Hans Anderson and the Brothers Grimm.

I will leave the pictures of Strasbourg to speak for themselves. It is a beautiful city blending the ultra-modern with the Middle Ages. Some day I shall go again with an easel and a paint box having an extra supply of purples and blues in order to depict the shadows that for once are beautiful.

We expected gaily uniformed bands performing in the city square, we looked forward to *fêtes* and rejoicings. For was it not the great Alsatian week? We had promised ourselves a city ablaze with colour and illuminations. The illuminations were there and flags were flying—and the band turned up with its bugles and side drums at its head; but as it was teeming with rain we turned into a place of amusement—which was almost as deadly dull as a *conversazione* organised by a village chapel.

In another generation, perhaps, France will return to its former lightheartedness; in the meantime everyone seems to be an onlooker waiting for someone to take the initiative—and no one does. VEDETTE.

K. Bartlett, the English rider of the A.B.C. in the Grand Prix. Bartlett won the 350 c.c. race in 1920 on a Verus, but he is now associated with the production of the French A.B.C. and Gnome - Rhone machines.

A FAST TOURING MOUNT.

Some Notes on the 16H Norton after Prolonged Use

AMONGST the duties of *The Motor Cycle* staff is the personal observation of points of interest in long-distance trials. For this purpose it is necessary for the observer to be mounted on a perfectly reliable machine, so that he may not only survive the trial without mechanical delays, but also return to headquarters with "copy" in the shortest possible time.

Again, since observed hills are often close together, a fast mount is essential if competitors' performances are to be watched at all the tricky places.

With these points in mind, and after due consideration, the writer of these notes selected a 490 c.c. Norton for his working hack.

Departures from Standard.

The 16H model was chosen as a basis, but in order to obtain increased comfort on long runs certain minor alterations from the standard specification were incorporated. First of all 700 × 80 mm. tyres were fitted, and to compensate for the slightly increased gear ratio an engine sprocket with one tooth less than standard was ordered.

Next, a fully valanced front mudguard, such as is fitted to the "Big Four," was specified so as to afford rather more protection in bad weather. It must be stated that all these extras, which were but the rider's personal whims, were fitted by the makers without necessitating any alterations in existing parts. Later modifications and additions to detail specification consisted of a Jelley saddle—a type always used by the writer—a Webb front brake to replace the horseshoe type as then fitted, a medium-sized Hunt electric head lamp with 6-volt accumulator carried behind the saddle tube, and a special pair of handlebars to suit the rider's "out size" in build. Thus equipped the machine came very near to the ideal fast tourist as imagined by its owner.

On the road with the 490 c.c. Norton—a mount long since proved exceptionally fast, comfortable, and easily controlled.

Suitability for Long Journeys.

Now, at one time there was current amongst a section of the motor cycle community a notion that the Norton was purely a "speed iron" and was not a suitable machine for long-distance touring. That this is an absolute fallacy has frequently been proved, and in the particular case under discussion additional proof is furnished by the fact that the Norton has the best non-stop record of any of the large number of machines which have from time to time occupied the owner's garage. Over a distance of some 7,000 to 8,000 miles the single mechanical hitch which occurred was a momentary piston seizure due to a mixture of oils which did not blend. Even this *contretemps* did not cause a road stop, and it was not until a week later that an opportunity was found for removing the cylinder for examination. Inspection revealed a slight seize mark, which was polished off with fine emery cloth, and subsequently all went well.

A Fast Touring Mount.—

Little need be said of the Norton's speed qualities, which are known the world over, but it may be added that, even with big tyres and a very full equipment, the H.16 more than satisfied all the requirements in this respect. As regards garage attention, the owner makes a rule of removing the cylinder of any machine he may possess after every 2,000 to 3,000 miles. Apart from decarbonisation, such an inspection reveals any latent troubles, which in the case of the Norton were invariably absent. The replacement of a front chain, one adjustment of the front hub, and the fitting of a locking device to a mudguard nut which persisted in working loose and causing a rattle, are the only adjustments worthy of mention. If driven on thin mixtures the Norton is a little apt to pink when picking up on a high gear, but this trouble was largely eliminated by fitting a 1 mm. washer, supplied by the makers, below the cylinder. With this washer in use top-gear hill-climbing under touring conditions is exceptionally good, and it is seldom indeed that low gear is required, except for hairpin corners and freak surfaces, which must be traversed at little more than walking speed. Amongst the many noted hills to the credit of the Norton are Porlock, Lynton, Park Rash, Alt-y-Bady, and the famous Welsh Screw hill. It is true that a stop occurred on the last-mentioned climb, but this was due entirely to the rider who, with a strange carburetter control, opened the throttle instead of closing it, causing wheel slip. The machine was immediately restarted at the same spot and went away with plenty of power in hand. With such a fast machine it was possible to attain average speeds as high as the road would stand, and the Norton is one of the very few machines which will honestly cover the mile per minute under normal road conditions.

Features Contributing to Speed.

When such excellent all-round results are obtained from an apparently normal 500 c.c. single, it is worth studying the design in order to find out "the reason why," and the "insides" of the Norton are certainly more interesting than the exterior. A very light cast-iron piston (aluminium pistons are offered as an alternative) and a light but stiff connecting rod are partly responsible for the rapid acceleration and ability to maintain high speeds without apparent effort, while the unusually large and heavy flywheels are responsible to some degree for the smooth, slow running and wide flexibility range. The valves are not unduly large,

Stiff H-section connecting rod with roller bearing big end; it is liberally drilled up the centre web.

A light cast-iron piston with a decided waist is fitted to the standard Norton. The hollow gudgeon pin is located by a peg and locked by a split pin at the opposite end.

but the cams and the port design are excellent, and the long stroke enables a reasonably shaped compression chamber to be employed.

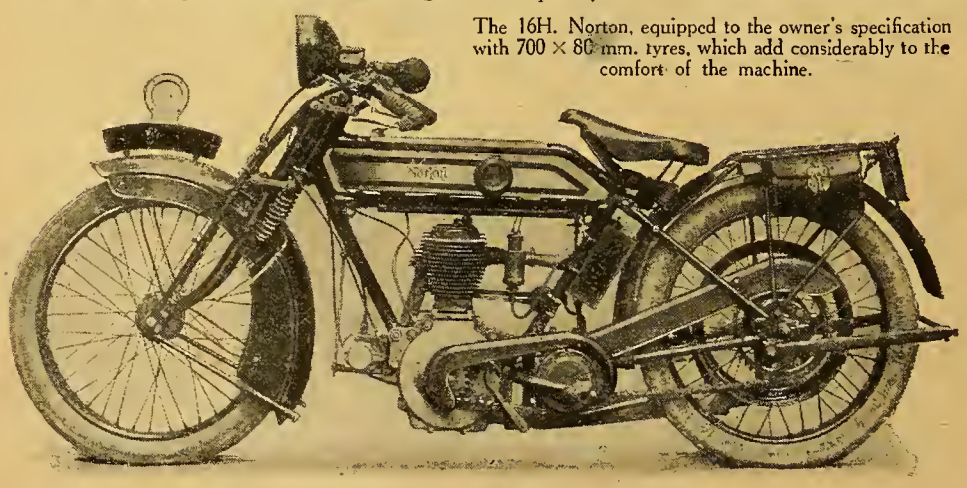
The above points, in conjunction with the admirably designed cylinder, well ribbed where necessary, and having ports separated from the barrel, are chiefly responsible for the fact that the Norton is one of the fastest standard machines on the road. The word "standard" is used advisedly, for the Nortons, even as used in road racing, *are* standard machines, subject, of course, to individual tuning by their riders.

General Characteristics.

In praise of the Norton 16H, it may be said that it is fast, reliable, flexible, a fine hill-climber, well balanced, and easy to handle—what more is required?

Criticisms of this machine are not easy to find, but slightly better protection and lubrication of the front driving chain might be arranged with advantage, a rather unduly large hole is left in the back of the magneto chain case, which permits the entry of water and grit when traversing typical trials routes, and the mudguarding is—only little better than on the average sports machine. All these matters, however, are trifles compared to the fact of its wonderful power and flexibility, and the owner would have put up willingly with more serious faults for the pleasure of riding so fine an all-round performer, which, tractable as a lamb in traffic, can become a roaring lion at the touch of the throttle.

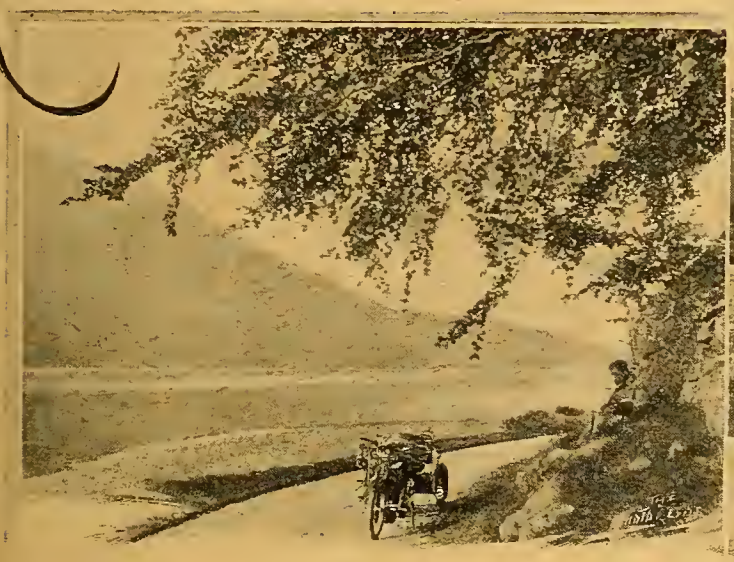
The machine has now changed hands, but it is satisfactory to watch it piling up gold medals in the hands of the new owner, who is absolutely unconnected with the trade, but is nevertheless having thoroughly satisfactory results in some of the more important long distance reliability trials.



The 16H. Norton, equipped to the owner's specification with 700 × 80 mm. tyres, which add considerably to the comfort of the machine.

SCOTLAND and the MOTOR CYCLIST

Notes on Touring in the Highlands and the Appreciation of Mountain Scenery.



(Left) A halt on the shores of Loch Lochy, Caledonian Canal. (Right) Near Cockbridge.

MOST motor cyclists promise themselves a Scottish tour—"next year, perhaps," they say, "if times are better." But the percentage of those who ever realise this dream is comparatively small—and more's the pity, for the peculiar charm and beauty of the Highlands is unrivalled.

The writer has motored in many lands, but neither the Mediterranean countries of Europe, the sun-swamped Orient, nor the many climes of Africa have revealed to him anything quite so fascinating as the calm, rugged grandeur of our own "Bonnie Scotland."

With this magic hunting-ground at his door, so to speak, the discriminating tourist has no call to go abroad in search of Fairyland.

Bad weather is a "spoil-sport" anywhere, but rain in the Highlands is a very different thing from a wet day in Manchester, and it is wonderful how the swirling Scotch mists can soften the most vigorous landscape.

Not Always Raining.

However, it is not always wet north of the Clyde; in the latter half of the summer of 1920 there were six consecutive weeks of glorious weather. Still, it must rain sometimes, even in the best regulated countries, and when it does, why, there are other fields to plough: where, for instance, is the gun or the rod more in evidence—the artist or the golfer better catered for? Moreover, when you *are* in the "Land-o-Cakes," what better opportunity for sampling them? Then there's the famous native wine. . . .

He is an old man who can say that he has exhausted the possibilities of Scotland. It will take many an annual three weeks' holiday to visit even the better known beauty spots—and the Highlands are all beauty spots.

A mistake a great many people make is to map out an extensive tour and then spend all their hard-earned vacation trying to keep up to schedule. What is the use of hurrying along day after day just so as to be able to say, "I covered 2,000 miles on my holiday?" "More fool you," the rejoinder should be. "You might have done even better up and down the Great North Road."

Avoiding a Set Itinerary.

How often has one thought, when motoring in the Highlands, "What a pity, after coming all this way, to rush by this glorious scenery, these wonderful glens—I should like to linger here?" For heaven's sake, then, why not do so? And yet few do; they *must* push on to such and such a place, because otherwise they would feel that they were wasting time.

By far the best way is to make no plans at all, and just wander along till one comes to some spot that takes one's fancy, and then make straight for the nearest village. Discreet enquiry is almost sure to discover some cottage where one may lodge for a few days.

The writer has always followed this scheme when motoring at home or in France or Spain, to the benefit both of his pocket and enjoyment, for the quaint

Scotland and the Motor Cyclist.—

customs and society of the natives are infinitely more amusing than the trivialities of the commonplace hotel.

"People who live in flat countries," they say, "have drab minds." This may be so, but then their pleasure is all the keener when visiting the land of their more fortunate neighbours.

One must not, however, expect to find the Alps in Scotland; but lest this should deter some from venturing thither, it is as well to remember that one mountain is much like another, and that many of the world's giants turn out, on inspection, to be comparatively disappointing—the reason being that a considerable portion of their altitude is derived from the already high level of the ground from which they spring. It is a fact that many of the Highland Bens, while the snow lingers on their summits, are quite as impressive as the Pyrenees, say, or Mount Olympus.

USEFUL THINGS TO KNOW.

Engine Revolutions, Gradient and Speed Estimation by Simple Rules.

WHEN motor cyclists foregather it frequently happens that discussions turn on such subjects as speeds and gradients.

Below are given some formulæ and other data by means of which many an argument may be settled.

To Find Engine Revolutions.

If the r.p.m. of an engine, at different speeds and on a certain gear, be divided by the speed, a constant results, which, when further divided by the gear ratio, gives a fresh constant, depending on the size of the tyres used. These constants are as follows:

For 24in. wheels = approximately 14 (14.04).
For 26in. wheels = approximately 13 (13.01).
For 28in. wheels = approximately 12 (12.1)

From this we can see that:

$$\frac{S}{V \times r} = k \text{ or } S = k \times V \times r.$$

where: V = speed in m.p.h.
S = engine speed in r.p.m
r = gear ratio.

For example, on a machine travelling at 30 m.p.h. with a 5 to 1 gear and 26in. tyres, the engine speed will be $30 \times 5 \times 13 = 1{,}950$ r.p.m.

Measuring Gradients.

Every motor cyclist knows the way in which local hills become terrors of 1 in 3 and 1 in 4, when there is no one near who has actually measured the gradient to correct the mistake. The apparatus required to measure the gradient of any hill is a piece of string, preferably weighted at one end, and a ruler.

Place a wheel of the machine with the valve nearest to the ground, and stretch the string across the centre to form a diameter. Where it again meets the other edge of the tyre hold it and let the free end hang vertically. Mark where the end passes the tyre, and measure the distance between this point and the point of contact of the tyre with the ground. If the diameter of the wheel is now divided by the distance just found, the result is the gradient of the hill.

Thus, on a machine having 28in. tyres, if the measurement is found to be 2in., the gradient will be known at once to be 1 in 14.

Estimating Speed.

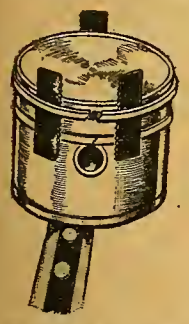
To find one's approximate speed when travelling along a main road, it is only necessary to count the number of telegraph posts that are passed in two minutes. This, when the posts are at the usual distance of 60 yards, gives one almost the exact speed in miles per hour. For instance, if 30 posts are passed in two minutes, the speed is approximately 30 m.p.h.; 15 would be passed in one minute, or 15×60 in one hour. Each post being 60 yards from the next, which equals $\frac{3}{88}$ of a mile, the speed is really $15 \times 60 \times \frac{3}{88}$ miles per hour, which, when reduced, becomes 30.6 m.p.h.

W. T. H.

NOTES ON PISTON RINGS.

Hints on the Manipulation of an Important Engine Detail.

IN the making of piston rings it is important that they should be turned to such a diameter that the ring fits the cylinder when the gap is closed. The correct diameter is found by multiplying the bore of the cylinder by 3.1416, adding the width of the gap *when the ring is open*, and finally multiplying the result by 0.318. If the rings are to be ground after turning, a further 0.01in. should be allowed. Castings for piston rings should be of iron, cast vertically, the lower end being used for the rings since this portion of the metal is cleaner and less porous. It is, of course, only necessary and worth while to *make* rings when fitting oversize pistons or in an emergency, and this information is worth remembering.



Removing piston rings by means of three strips of hack-saw blades.

Making Special Rings.

In turning rings they are first made over-size, bored to correct size, parted off, cut, and clamped upon a mandrel with the slot closed, and finally ground to the size of the cylinder. The cylinder should be carefully measured either with inside micrometer or by means of inside callipers (transferring the latter measurement to outside callipers with which to check the grinding of the new ring). Catalogue specifications of cylinder bore should never be accepted since the cylinder may have worn oversize to the extent of three or four thousandths, which can be compensated for in the new rings.

The final grinding operation, after cutting gives an eccentric finish to the ring, thus putting the greatest strength of the ring at the point of greatest leverage. Many rings, however, are not eccentric.

In removing the ring three pieces of hack-saw blade or strips of sheet metal are passed behind the ring, so that they are an equal distance from one another. The ring may then be easily slid off. In re-assembling remember to fit the bottom ring first.

When the Ring is Burnt In.

If the ring is gummed into its groove with carbon a piece of hack-saw blade should be judiciously worked to and fro under the end until the carbon is loosened. Sometimes a piece of copper wire pushed round under the ring will achieve the desired result.

In fitting new rings they should be tried in the bore of the cylinder prior to placing on the piston, and the slot adjusted so that a gap of about 0.004in. obtains.

There are various piston ring slots, such as the plain sloping one, the pinned variety (which is chiefly used on two-strokes to prevent the ends creeping round and fouling the exhaust and transfer ports, although it is sometimes used to keep the slots from working in line on four-stroke engines) and the step-jointed slot which is made as shown by filing two rectangles on opposite edges of the ring so that they meet.

Dealing with Worn Cylinders.

When a cylinder has worn so that a perfectly round ring is not satisfactory, the ring should be hammered to fit. First the ring should be placed on the piston and the latter pushed up and down in the cylinder for two or three seconds, using a wood block in the cylinder head to prevent the piston running up into the combustion chamber. Upon removal the portion of the ring not in contact with the cylinder will show up, and if this part is held on a flat iron block and judiciously hammered from the inside, it will probably mark up all round.

C. M. N.

Various types of piston ring slots, showing also the method of step cutting.

SOLDERING ALUMINIUM AT LOW TEMPERATURE.

ALUMINIUM, despite the general ease with which it is worked from the manufacturing point of view, is one of the most difficult of metals with which the repair man has to deal.

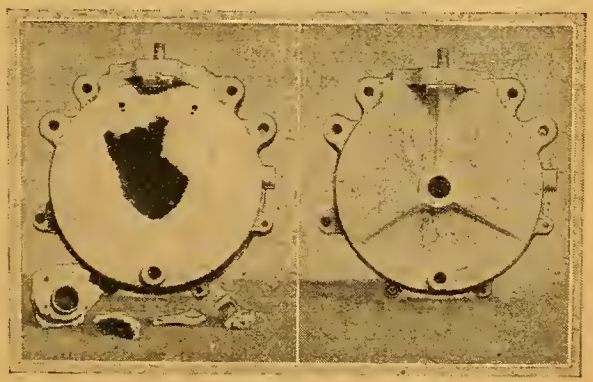
Primarily the difficulties which arise in aluminium repair work are due to the rapid oxidisation of the metal, the chemical changes at the surface being almost instantaneous after filing or cutting.

Welding of aluminium, of course, is possible, but unless skilfully done by specialists the intense heat used is apt to injure the physical properties of the metal, not to mention the possibility of setting up distortion or local stresses in a delicate casting.

Most of the difficulties of repairing aluminium articles, however, are overcome by the use of a solder prepared by the Salunite Aluminium Solder Co., of 43, Johnson Street, Westminster, London, S.W.1. This preparation melts at a comparatively low temperature, such as may be obtained by a small blow-lamp or even a soldering iron. No preparation of the metal is required other than by cleaning and scraping to a bright surface; a flux is not essential, and the work to be repaired is "tinned" by bringing it up to the requisite heat and rubbing the stick of solder thereon, finally brushing in the molten metal with a stiff wire brush.

As the solder becomes plastic it is possible to mould bosses, strengthening ribs or the like on a weak casting, this moulding being done with a flexible knife-blade.

When the solder has set it can be turned, drilled or tapped with ease, and it is very difficult to break away at the joint any two pieces which have been properly soldered together. Salunite is sold at 8s. per lb.; a trial outfit is available at 6s.



A badly damaged motor cycle crank-case repaired with Salunite aluminium solder. Not only has the boss been replaced but strengthening webs have been added to support the repair, making the case stronger than when new.

What it Costs To Tour

The Choice of Accommodation during a Holiday Awheel. How to find a Comfortable Hotel.

EVERYONE appears to be interested in touring, but nobody agrees as to its cost. It was fully anticipated that a recent letter complaining of the almost prohibitively high level of hotel charges would arouse some interest and one or two denials, but even we were surprised at the extent of the correspondence which has followed.

One main fact emerges at once from the welter of ideas supplied by readers to rescue our original correspondent from holiday-making by motor coach. The economically-minded tourist must avoid the big motoring hotels. Not, it should be noted, because these places do not provide the comfort their classification would indicate; but because anything approaching a large hotel, with a correspondingly large staff which specially caters for the purely seasonal motor tourist, cannot be expected to compete in the matter of price with the smaller "family and commercial" inn which pays its way all the year round as a matter of course.

There is sound sense in this view; but the difficulty would appear to lie in discovering these less pretentious commercial houses in strange towns. There are many small hotels which exist chiefly as places for the sale of intoxicating liquor, and externally these are almost indistinguishable from the establishments in which the commercial traveller and other habitual wanderers find comfortable accommodation.

Again our correspondents come to the rescue. "Ask a policeman" is a safe and well-recommended plan; the local shopkeepers are usually able to help; or, according to one reader who has "been on the road for twenty years" a useful list may be found in "Good Lines," published by the Commercial Travellers' Association, Aldersgate, London, E.C.

The Question of Finance.

On the other hand, one or two unpleasant experiences at wayside inns which lacked the seal of any motoring association are sufficient to discourage many people from further experimenting. Henceforth they decide to take no more risks even if they have to pay a little more for their comfort.

The whole subject is one which appeals to no two people in the same light; and the fact that the temperament and financial standing of every motor cyclist tourist is far from alike makes it still more difficult to lay down any general rules. For example, the present writer has felt more satisfied when, paying a 19s. 6d. bill at a certain "three-star" recommended hotel than, two days later, when 10s. 6d. was charged at a wayside inn; but, on another occasion, he obtained incomparably greater comfort and better food for 13s. at a Welsh market town non-motoring family and commercial hotel than he enjoyed a few days later for 15s. 6d. in a doubled-starred establishment much frequented by motorists generally.

High Charges No Guarantee of Satisfaction.

Locality sometimes makes a big difference, but again it is impossible to say definitely which way the difference lies. The largest house in a big city often provides better value for money than the unassuming village inn; but just as often the best hotel in the village is more comfortable than 90 per cent. of the city establishments and less costly than all of them. It should be unnecessary to point out that the charges at seaside and holiday resorts are almost invariably higher than the corresponding rates in districts less favoured by the holiday-makers, but even in this case there are more exceptions than should be necessary to prove the rule.

Perhaps it is a case where wisdom lies in a variety of counsels, and, on this assumption, we append a selection of letters from our readers:

"Commerk," who is what his *nom-de-plume* implies, recommends commercial hotel, advice which he follows himself with satisfactory results:

"My usual bill for tea, bed and breakfast—a meat tea, *not* a 5- or 6-course dinner, comfortable bed and a good bacon and egg or fish breakfast—is, for one person (and the same rate applies when I take my wife), 3s. 6d. tea, 3s. bed, and 2s. 6d. breakfast. One gets as much to eat as one would wish for, a good bed, and courteous attention, without being overwhelmed with servants to tip; this charge also includes garaging."

A very sensible defence of hotel charges is propounded by Mr. W. T. Jabobs:

"Do we realise that, often, an hotel of, say, twenty rooms has only a few engaged all the year round and has to pay rates and taxes on the lot; a staff has to be kept large enough to cope with a sudden filling up of all the rooms;

What It Costs to Tour.—

and a vast amount of clean linen must be available—which all represents so much dead money?

"I have seen very moderate bed, breakfast, and bath charges advertised at some quite good London hotels, but I think in most cases these are nearly always full, or nearly so, so each guest has to bear a much smaller proportion of the overhead charges than a guest at a country or small town hotel, where, except for some special show week or other local event, the hotel is three parts empty.

"People expect to find a bed, wash, and a meal at any time they turn up in any town, and as long as we expect that I suppose we shall have to pay for it. May I suggest that the A.C.U. and A.A. (who ought to be one) get out a list of private apartments in various towns which are willing to put people up for a night."

Valuable assistance from the A.A. Handbook is acknowledged by Mr. A. F. Scroggs, who thinks Mr. King, our original correspondent, has been unfortunate in his choice of accommodation:

"No doubt these things vary in different parts of the country, and I cannot say what the conditions are in the North, but I have done a good deal of touring in the West of England, and I do not find it so expensive as Mr. King appears to do.

"With the very valuable assistance of the A.A. handbook, I usually find very comfortable rooms, with dinner and breakfast for 20s.—25s. for two people for one night, and I have had them as cheap as 18s. (at the "Ship" Hotel, Crediton, Devon). I always aim at staying at a village or small country town rather than at a big town, as I find that at, say, a two-star hotel in a town one sometimes gets one-star comfort at a three-star price, while at a one-star village hotel one may have good food, perfect comfort, and that personal, courteous attention that is generally lacking in a big hotel. I should like to mention especially the 'Bath Arms' at Cheddar in this connection.

"We generally buy food for the mid-day meal and take it in the sidecar, eating it by the roadside wherever we happen to be, about 1 p.m. This is much cheaper, pleasanter and more convenient than lunching at an hotel. Acting on these lines the expenses work out at rather under £2 per day, the daily mileage being about 80-100 miles."

Economy First.

Classified hotels should be avoided, according to Mr. H. A. House, whose experiences otherwise tally with Mr. Scroggs's:

"I have done a good deal of touring on a Triumph and sidecar, and am a member of the A.A., to my own great advantage, as I have often found. But if cheap touring is desired, the classified hotels must be carefully avoided. Personally I always make for the better class of village inn, or a temperance hotel, and with reasonable care in selection, I have always found these clean and hospitable, with good plain food, and quite suitable for a lady, provided great luxury or comfort is not expected.

"On arriving in a strange town, have a chat with the local policeman—he will generally give useful advice as to a suitable place. Also, *always* enquire prices before deciding to stay the night. For the mid-day meal it is far cheaper (and more enjoyable, too, in my opinion) to buy a few supplies, and have a Thermos filled before starting, and then to have lunch in the open, when and where one will. Tea may be managed in the same way, or high tea at about 6 p.m., does away with the expense of dinner and is far cheaper.

"A short while ago two of us did a four days' run to Yorkshire and back, covering 615 miles, and including everything the cost was £1 10s. per day for the two of us. Last summer two of us did an eighteen-day trip round North Wales, during August, covering 925 miles. The total cost for the two of us was £1 6s. per day. The most comfortable place we stayed in cost us £2 2s. for the two of us for three nights.

"Of course, if Mr. King really wants to spend as little as possible, and see as much as possible, camping is the very best solution. With a friend, I have done a fourteen-days' camping tour of Cornwall, covering 1,150 miles for £9 10s. inclusive for the two."

Several useful rules for the economically-minded tourist are embodied in the following letter from Mr. E. L. Long:

"Having toured in practically every county in England and Wales and not being blessed with overmuch wealth, I have reduced expenses by observing a few self-taught rules.

"Firstly, as you are not a commercial traveller and will not be using the hotel again, do not tip except in the case of exceptional attendance by waitress or "boots," which as a motor-cyclist you will not often receive.

"Only go to a "recommended" hotel as a last resource, and if forced to, for bed and breakfast only. Another important point is to knock off early: this gives one the opportunity of looking about for a reasonable place. The fact of a small temperance hotel not having a garage will usually save 6d., as the ordinary garage always charges less than the hotel. Avoid hotels and inns for lunches and teas, especially for the latter.

Evenings Free.

"If riding near the coast knock off about four o'clock at a town about six miles inland. Have tea, wash, and a clean-up after having fixed up your hotel for the night and then run down to the coast and enjoy yourself for the evening.

"Of course, the game will always be expensive as far as accommodation is concerned: you cannot expect an hotel to be run on private house lines. Mr. King made a mistake in letting his wife see the bills; I always lose mine. When a man pays as much for tea, bed and breakfast for one night as the lady gets to keep the family for a week, he must expect some remarks. I nearly had a holiday in North Wales spoilt from the same cause. Nevertheless, except for the hotels, petrol, and oil, there are very few extras, as we find our own amusements, and cent. for cent. it is very little dearer than a seaside holiday if care is taken."

Beginning with the statement that solo touring is the most economical way of spending a holiday, "'Bus before Char-à-banc" goes on to describe his own holiday:

"At the end of June I spent nine days touring from the Midlands, in Devonshire, and in all covered about 900 miles. I put up at nights at any convenient commercial hotel, all of which I found to provide most comfortable accommodation, and the average charge for each of the eight nights was between 9s. and 10s. for supper, bed, and breakfast. The total cost of my holiday, including absolutely everything except the wear and tear of the machine—a 4 h.p. Triumph—and with no desire to cut down expenses, was £9 16s. 6d."

Mr. J. Stuart White solves the problem by touring in France. He writes:

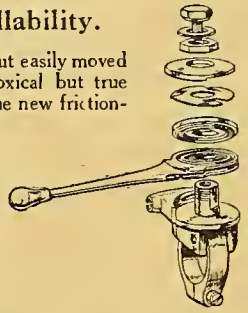
"Having suffered from the high charges of our hotel keepers I have great pleasure in giving Mr. A. S. King some good advice as to how he may avoid them. This in three words—'Tour in France.' He will find that by picking the smallest hotels in the Michelin Guide he can travel comfortably with his wife for just the same figures in francs as it costs him in shillings in England per day, *i.e.* his holiday will cost him only half an English one in hotel expenses. Besides this he will have the very finest of cooking and will be welcomed as a friend at the hotels. (See picture in Michelin Guide, which is quite true to life.)

"My boy and I, touring France last year, found that all the passport expenses, cost of crossing both ways with a Scott and a sidecar and the extra cost of petrol were amply covered by the saving on hotel bills. Prospective tourists can choose any sort of scenery they fancy."

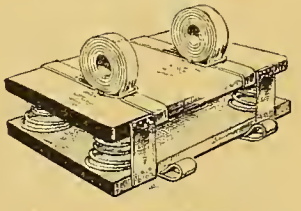
AMONG THE ACCESSORIES

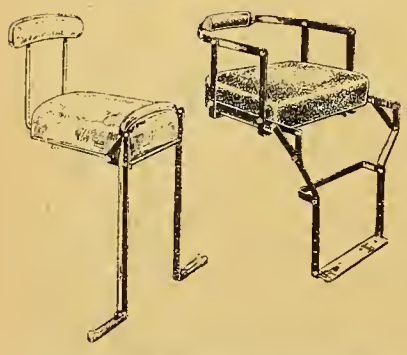
Controllability.

Immovable but easily moved is the paradoxical but true attribute of the new friction-held control lever introduced by J. Doherty & Son, Digbeth, Birmingham.



Carrier Equipment.



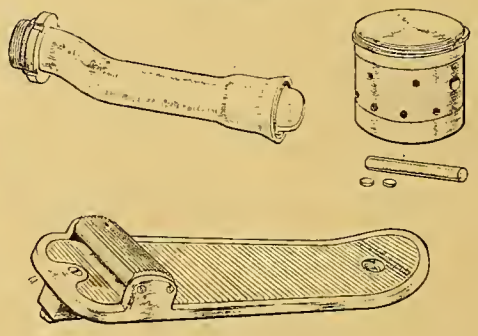


All forms of pillion seats, etc., are handled by Saxessories at Saxol's Works, Coventry, above being a sprung luggage carrier (20s.), and below astride (37s. 6d.) and side (35s.) pattern seats.

'Multum in Parvo.'

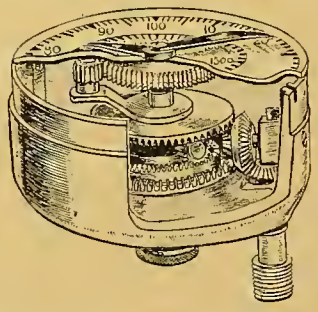
Embodying a screwdriver, an ordinary tyre lever, and a small ¼in. spanner, which will take the centre bolt of a magneto contact breaker, the Master tool also acts as a tyre locking lever, preventing the cover from rolling off the rim, while leaving both hands free. 7d. (Dell & Mitchell, 24, Soho Street, Liverpool.)

Specialisation.



Fitments designed specially for Douglas machines form the output of W. G. Coram, 150, Victoria Street, Bristol, three of whose latest productions are shown. Top, left: an extension oil sump filler for the 595 c.c. model: top, right: a light cast iron piston, with two rings in one groove, for the 348 c.c. machine; and, below, foot-boards also for the 348 c.c. model.

Mileage Recording.

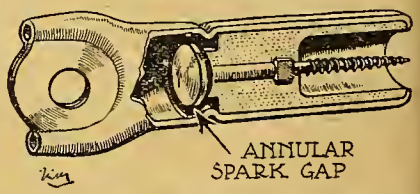


Trip and total mileage, indefinitely, are recorded only by the Ahcol indicator. The ingenious epicyclic reducing gear is shown in this semi-sectioned drawing. Transmission of course is on usual speedometer lines. £2 2s. (A. Hyslop & Co. Ltd., 30 Durham Road, Holloway, London N. 7).

Locking-up the Fuel Supply.

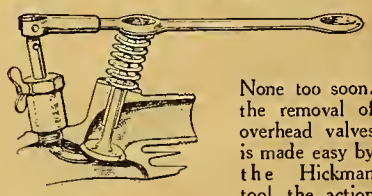
Theft prevention is aimed at on the Wright petrol tap by cutting off the fuel supply by means of a Yale lock. 30s. (R. Wright, 114-116, Southampton Row, London, W.C. 1.)

Neat and Inexpensive Spark Gap.



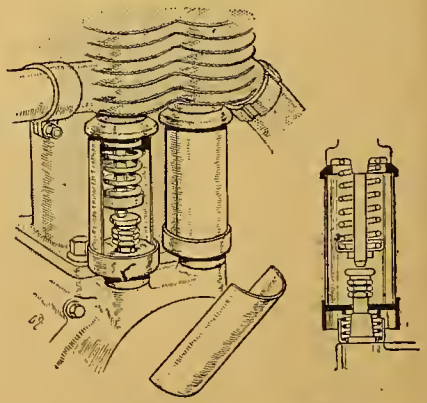
The firm of Lodge Plugs, Ltd., has introduced a terminal embodying an auxiliary spark gap device, which is offered at 1s. 6d. It is particularly recommended for use with slightly faulty or easily oiled-up plugs.

Eliminating an o.h.v. Disadvantage.



None too soon, the removal of overhead valves is made easy by the Hickman tool, the action of which is self-explanatory. (H. G. Hickman, 59, Queen's Road, South Farnborough.)

Enclosing the Valves.



Neatness, simplicity and ease of manipulation are the outstanding features of the valve cover protected by H. F. Harrison, 13, Styvechale Avenue, Coventry. Each end of a split sleeve fits into a metal cup and the whole is held in position by the pressure of a spring located in a socket encircling the base of the tappet guide.

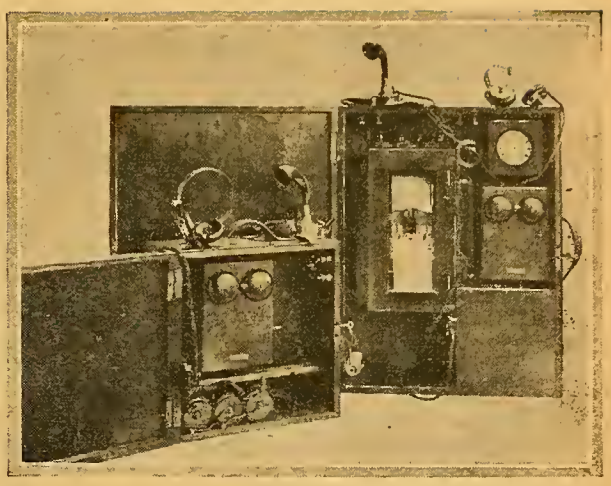
ELECTRICAL TIMING APPARATUS ON LOAN.

Well-known Firm in the Motor Industry Ready to Help Clubs with Hill Climbs and Speed Trials.

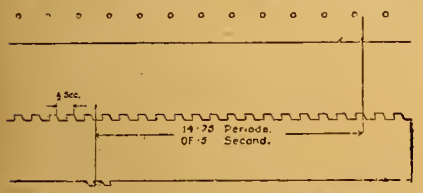
ARRANGING a method of timing his club's hill climb is one of the chief bug-bears of the average club secretary, who will learn with much pleasure that an up-to-date electrical apparatus is now being offered on loan by Ferodo, Ltd. (Sovereign Mills, Chapel-en-le-Frith), manufacturers of the brake lining of that name.

The outfit, which we illustrate, is complete with telephone and the necessary cable for kilometre speed trials.

The recorder and the electric control from the clock were specially manufactured by Elliott Brothers, Ltd., and the degree of error in working is for practical purposes quite negligible. Times can be recorded, and the record kept down to minute fractions of a second, impossible to obtain with the best class of split second chronometer. In addition, the times of any number of competitors can be recorded at very brief intervals, so long as the person in charge of the instrument can mark the different competitors' names or numbers against the starting and finishing marks recorded on the paper strips.



Timing apparatus, clock one telephone, etc., are contained in the large case at the rear, the telephone and connections for the contact strip at the start being in the smaller one.



Timing strip, showing how the apparatus is used.

In operation the device works on the same general principles as the one used for short distance records at Brooklands, which has already been described in *The Motor Cycle*. In this case a brief recapitulation should suffice.

Contact strips are laid across the road or track in electrical circuit with the recording arrangement; the recorder is started, and drives the strip of paper under three special marking pens; the two outer pens make straight lines, the centre one is given a lateral movement, which produces a continuous series of regular zig-zag lines, the periodicity of each cycle being exactly half a second.

The sketch of a length of the paper strip used shows what takes place. On contact being made by passing over the road contact strip, the pen on one side is drawn out sideways and returned immediately contact is released. The strip shows two such marks, one being made by the front and one by the rear wheel of the vehicle.

At the termination of the run, the vehicle makes contact with the other strip, and this is recorded by the other pen. Drawing lines at right angles from these points to the centre marking gives the time elapsed between start and finish. As shown, there are fourteen periods of half-seconds, plus three-quarters of a half-second; the time taken, therefore, is 7.375 seconds.

By using a scale for sub-division below quarters of a second, readings can readily be made to one-sixteenth of a second, and a permanent record kept by suitably marking the strip.

Promoters of speed trials and hill-climbing events who wish to take advantage of the offer of the apparatus should lose no time in getting into communication wth Ferodo, Ltd.

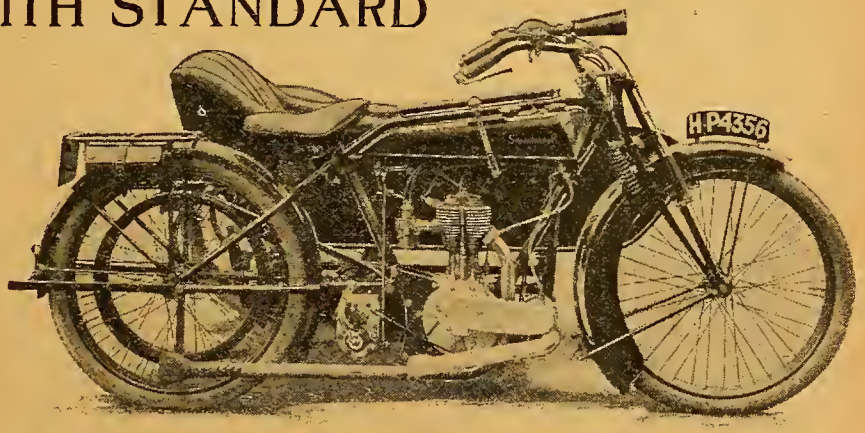
DISTINCTION WITH STANDARD COMPONENTS.

New 350 c.c. Sparkbrook Lightweight Sidecar Outfit.

THE modern tendency towards lightweight sidecar outfits is well exemplified in the latest model Sparkbrook.

Engined with the standard 350 c.c. side-by-side valve J.A.P., it has chain and belt transmission through a three-speed Sturmey-Archer gear, with clutch and kick-starter. Although the excellently-finished machine is constructed on standard lines throughout, it differs from the average assembled machine in that practically all the parts are constructed in the Sparkbrook works, even the Druid type forks being of the firm's own manufacture.

Instead of utilising the normal Sturmey-Archer change speed lever, a neat gate is attached to the tank, the actual control lever being carried on the lower tank rail. The specification includes B. and B. carburetter, M-L magneto, aluminium footboards, a channel section rear stand, and an internal V rear brake. In addition to this, such improved details as a positive adjustment for the front chain and gear box are included.



Several refinements distinguish the Sparkbrook lightweight outfit from other machines embodying a very similar specification.

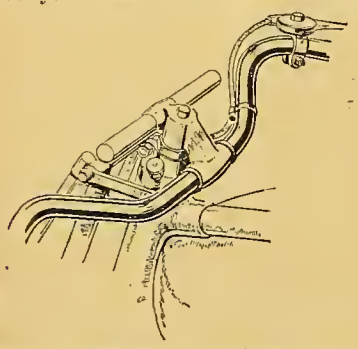
The price of the machine, with a neat and well constructed sidecar of suitable proportions, is £101 17s., or solo £78 15s. The makers are the Sparkbrook Manufacturing Co., Ltd., Payne's Lane, Coventry.

NEW RANGE OF SPORTING SINGLES.

Neat Design of Massey Machines fitted with Blackburne Engines and Burman Gear Boxes.

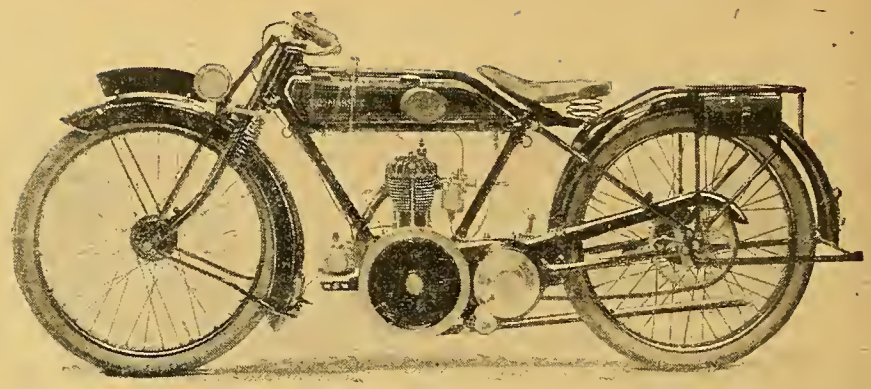
QUITE a new make of motor cycle has recently made its appearance in the Birmingham district. Known as the Massey, it is being produced by the Massey Motor Company, Ltd., of 227-238, Belgrave Road, Birmingham.

Several variations are made to suit the requirements of different types of rider, but in the main all the models are similar, and therefore it will suffice to describe the 349 c.c. sports model. It is fitted with a Blackburne engine of that capacity, an enclosed chain transmitting



Massey handle-bars with auxiliary mounting for lamps, etc. to preserve the celluloid covering on the main bar.

the power to a three-speed Burman gear box with clutch and kick starter. Final drive is also by chain, protected over the top run by a light guard. Internal expanding brakes are fitted to both wheels, the front being the well-known Webb type. A Cox carburetter supplies the mixture, and the circular type M-L magneto is employed for ignition purposes.



Extremely symmetrical lines are followed in the layout of the standard 349 c.c. Massey.

On the whole the Massey machines have a standard lay-out with a particularly neat appearance, but it is in detail work that they chiefly excel. The steering head is fitted with very large ball races, both the upper and lower ones having special lubricators.

A Practical Handle-bar.

Quite an unusual fitting is found in the handle-bar unit, the bars themselves being celluloid-covered and attached to a backward projecting lug, while a forward extension of the same lug carries a short cross piece to which lamps, speedometer, etc., may be fixed, thus saving the handle-bar covering. In spite of the fact that they are of sporting appearance, the bars give a particularly comfortable position for touring. A particularly fine piece of work is to be seen in the bottom bracket lug, which is both light and stiff in construction, being internally webbed and having a draw bolt adjustment for the gear box.

Mudguarding again is well carried out, the rear guard being of wide section and domed, while the fully valanced front guard is of a peculiar rectangular section, splaying towards the rear, where it is no less than 9½in. wide.

Sidecar lugs are incorporated in the frame, and the top tube slopes slightly rearwards, in addition to being dropped in a gentle curve. Foot rests are adjustable for position, and in the case of damage can be easily removed and replaced. Silencing arrangements are carried out by an aluminium expansion chamber lying below the chain stay.

Amongst the other practical points which are very noticeable on the machine are the sensibly proportioned screw adjustors for the rear wheel, and the rubber knee grips screwed direct to the tank, and having a considerable range of adjustment in a horizontal direction. The price of this machine is £78 15s.; it is also sold at £79 16s. in a modified form, with aluminium piston and racing cams, and tuned to do over 60 m.p.h.

T.T. and Sidecar Models also.

A third model with a similar frame is of the T.T. type, having an overhead valve Blackburne engine, and a close ratio gear box without kick starter; it is priced at £99 15s. Fitted with a neat sidecar of sporting appearance, with adjustable windscreen, and painted in black and gold to match the motor cycle, the standard 349 c.c. model is sold at £101 17s., while a very similar outfit having the 555 c.c. Blackburne as a power unit is priced at £110 5s.

FIVE 500-MILE RACES.

THERE will be five separate 500-mile races this year, one for each of the five recognised classes; these races, of course, will be run concurrently at Brooklands on September 23rd.

The table given below shows the classes of the machines for which the event is open, the time of starting, and the colours of the regulation jerseys worn by the riders.

Class	c.c.	Starting time.	Colour of jersey.
A ..	250	7 a.m.	White
B ..	350	8 a.m.	Blue
C ..	500	9 a.m.	Yellow
D ..	750	10 a.m.	Green
E ..	1,000	10 a.m.	Red

The races will be stopped at 6 p.m.

The races will be open only to male members of the B.M.C.R.C. mounted on solo motor cycles. Prizes totalling £300 will be offered by the Motor Cycle Section of the Motor Trade Association, and by the British Motor Cycle Racing Club.

Any part of a competing machine may be renewed or replaced during the races except the cylinder or cylinders and/or the crank case, which parts may be sealed. Entries, which cost £6 6s. 0d. and close on August 31st, are limited to fifteen in each race.

Replenishment depots will be established at the Fork; each competitor will be allowed two attendants, and these must wear coloured numbered caps corresponding to the colour and number of the competitor.

No claims for records will be allowed unless the claimant has completed at least half the total distance of the race. Any competitor riding in close proximity to another competitor for two or more consecutive laps will be disqualified. Racing helmets must be worn. Entry forms can be obtained from the hon. secretary of the B.M.C.R.C.—Mr. T. W. Loughborough, Mill House, Warlingham, Surrey.

AUGUST HOLIDAYS.

Publishers' Announcement.

Readers who wish to insert Miscellaneous Advertisements in the issue of "THE MOTOR CYCLE" dated August 10th, 1922, should note that, due to the Holidays intervening, instructions must be in our hands by first post on Thursday, August 3rd, addressed to Dorset House, Tudor Street, London, E.C. 4.

ILIFFE & SONS LTD.

SELF-LUBRICATING SPRING FORKS.

Escombe Leaf Spring Suspension; Forks Combined with Mudguards.

So many spring forks and frames designed by enthusiasts have got no farther than the paper stage that it is particularly interesting to find an unorthodox device which has actually received considerable road testing. This applies to the front suspension under consideration, though the rear springing which we are also able to illustrate has

An unusual front suspension employing leaf springing. This spring fork has been in use for several thousand miles on an Indian motor cycle.

so far progressed no farther than the drawing-board.

Mudguard Valances form Fork Girders.

Several noteworthy points characterise the front springing, and it is claimed by the inventor that it is light and strong, attachable to existing machines, and cheap to produce. In essentials the fork consists of a sheet steel mudguard indented about the position of the normal fork girders to increase the stiffness and additionally strengthened at this point by an extra internal sheet. Pivoted from the end of the fork are a pair of forgings which take the form of a trailing link, in which the spindle is carried; they also serve as points of attachment for the butt ends of laminated springs. At the thin or rearward end of these springs are anchored two oscillating slippers, and one of the indentations on each side of the combined fork and mudguard is arranged as an oil reservoir, the contents being sufficient to last for many thousands of miles. Oil is fed direct to the pivot bearings, thence down the enclosed springs to the oscillating slippers.

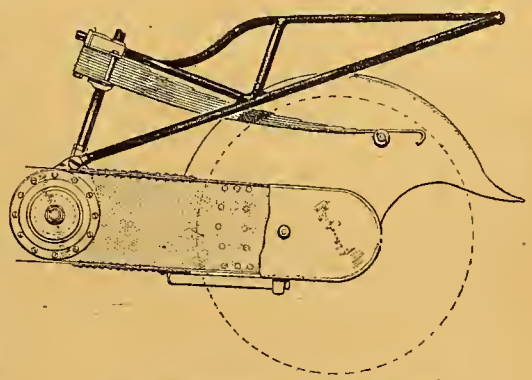
The head tube is attached to a lug fixed to the mudguard, and is stiffened in a forward direction by a triangular web and laterally by side tubes extending from the lug to the handle-bars.

Constant Spring Resistance Claimed.

It is claimed that by using springs which operate from a concave to a reverse camber and are directly attached to the links, the resisting movement of the spring about the pivotting points of the link may be regarded as constant throughout its deflection. The movement permitted is large, but to prevent excessive motion suitably curved stops are provided at the thin end of the spring to increase the resistance at abnormal deflections; these stops also constitute a safety device, since should the main leaf fracture, the second, third, and fourth leaves would butt against the stops. The travel of the wheel is additionally limited by the slots through which the spindle works. Considerable forethought is obvious in the design of the pivot attachments, since these are built up to a reasonable width by steel washers riveted and welded in position, the design of the mudguard also is practical, and should not only protect the rider but also all the working parts of the fork. In addition to the advantages of neatness and simplicity, and the very desirable trailing link action, the construction provides for a minimum amount of unsprung weight, and absolute lateral rigidity of the wheel. The moving parts consist only of the links and springs, with their oscillating slippers, all of which are efficiently lubricated by means of the reservoir already mentioned in conjunction with a wick feed. The springs are protected from mud and dust by their gaiters, and the wheel is instantly detachable by means of a knock-out spindle.

Preliminary Road Tests Satisfactory.

An experimental fork as described above has been undergoing road tests for some fifteen hundred miles, fitted to a 998 c.c. Indian, and has so far given admirable results. In addition to this a rear suspension has been designed in which a special chain case and dummy chain case form radius rods from the gear box to the rear wheel, laminated springs being attached to the saddle tube and to rollers on either side of the rear sheet steel mudguard. This is designed for a maximum deflection of nearly twelve inches, and should provide extreme comfort, though considerable ground clearance will be necessary. The inventor is Mr. R. D. Escombe, South Park, Sevenoaks, Kent.



A proposed method of rear suspension.

FURTHER NOTES ON SOLDERING.

In dealing with hints on soldering it is the writer's opinion that insufficient stress is usually laid on the absolute necessity of thoroughly cleaning, by scraping or other means, the surfaces to be united: omitting this precaution is the reason why so many beginners fail in making a good job.

When soldering nipples on control wires, it is sometimes necessary to unravel the inch or so that has been exposed to the air and clean each strand separately with emery cloth, afterwards twisting together, securing the ends with a turn or two of soft wire and "tinning," taking care that the solder penetrates well between the strands. When the nipple has been soldered in position the whole should be well washed in hot, soapy water to remove any acid that may remain.

Trouble is sometimes caused by the heat from the bit oxidising the steel wire and so preventing the solder adhering; for this reason it is advisable to use the lowest temperature that will allow the solder to run freely, and also see that the surfaces to be soldered are well covered with flux before applying the bit.

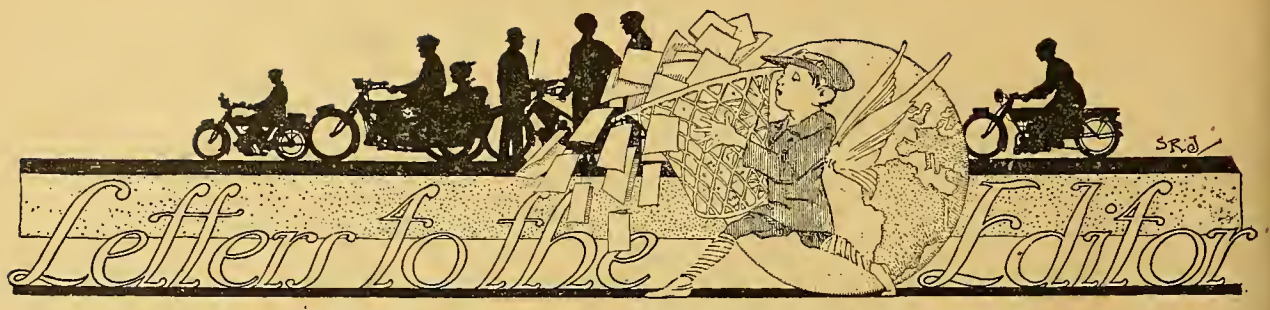
Remaking Cracked Joints.

Cracked soldered joints are nearly always corroded; therefore it is best to separate the parts and well scrape the surfaces before attempting a repair.

Leaks sometimes occur round filler cap bushes and cause much annoyance by allowing petrol to splash over the outside of the tank. The screwed bush may be removed by inserting the point of a knife in the crack and melting the solder by means of a large bit, at the same time levering apart. Here a word of warning may be given, the writer having seen a flame two feet long leap from the aperture through an incandescent fragment on the bit igniting the gas in the tank although all petrol had been mopped out and the filler cup left off two days previously. One scarcely cares to imagine the result had the repairer's eye been over the hole at the time.

Beginners generally make the mistake of using too small a soldering bit, with the consequent rapid loss of heat. One about ½ lb. in weight is a very useful size.

H.W.B.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address

EVOLUTION OR REVOLUTION?

Sir,—For some years I have followed the progress made in design and lay-out of motor-cycle engines, and every year, whether at the T.T. or at Olympia, I have to some extent been disappointed with the improvements made. I find myself looking for something really new, not just a modification of pre-war engines or borrowed "aero practice"—so-called—but a new departure in internal combustion engines that will give us these things which even the most "super-bus" now produced does not give; that is, absolute reliability, complete silence, speed, and real economy.

Has the i.c. engine really reached its zenith, and are we to be content with what is actually a noisy, wasteful, unreliable, and tiresome piece of mechanism which would not be tolerated but for its mobility? Or is there a day coming when the petrol engine as we know it will be regarded in the same light as the old reciprocating type of steam engine is regarded to-day? C.J.M.

Warwick.

POWER LOSSES FROM OPEN EXHAUST

Sir,—Having seen that "Flux" is anxious to know my reasons for condemning a straight through exhaust pipe on Levis motor cycles, I submit the following as the probable reasons for the results obtained:—

The piston of the Levis engine (if I remember rightly) is not primarily designed for the purpose of aiding the incoming gases to expel the burnt exhaust gases, but rather that these two are kept apart, thus securing good petrol consumption.

The burnt gases have therefore two methods by which they are induced to leave the cylinder: (1) by their greater pressure than that of the atmosphere, (2) by a form of "inter-extraction."

It is on the latter that I base my theory. Suppose the piston to be at the bottom of its stroke, the exhaust gases will be flowing at a certain speed into the exhaust pipe, down to the silencer; now let the piston ascend for the compression stroke, and the inertia or momentum of the gases will be the means of forming a vacuum between the exhaust port and the silencer. When, therefore, the piston again reaches the bottom of its stroke, the burnt gases will be sucked down the exhaust pipe. This is called "inter-extraction."

If a straight through exhaust pipe is fitted it has generally to pass through an angle of 180°, which means to say that the skin friction of the gases will be very great, thereby reducing their speed and minimising the above-mentioned effect. SOLDER.

Oxford.

Sir,—My experience is exactly opposite to "Solder's." I changed the standard exhaust system, on my 1915 Levis, to a straight through 2in. flexible exhaust pipe. The difference is extraordinary: the 'bus is miles faster on the level, will climb with ease "pimples" at which it would have kicked before, runs cooler, and does not knock half so easily.

I can only suppose "Solder" refers to a straight through pipe of small dimensions, with sharp bends.

At the same time I notice that Davidson, on the T.T. Levis, had a standard silencer fitted, and I guess he has got a pretty good reason for it.

I found that a piece of aluminium tube, 5in. long, fitted over the air intake of my Amac carburetter, made a noticeable difference to the running of the 'bus.

If the edges of the exhaust port flange are rounded off with a file, it will be found that this portion will not carbonise up so quickly, and will permit a freer passage for the exhaust gases.

For speed I time the Levis, so that the points are just breaking when the piston is 6 mm. from t.d.c. With this timing the engine tends to revolve backwards on starting up, but only for the first few explosions. The magneto is a 1915 fixed ignition "Dixie."

I should be interested to know the maximum speeds obtained by private owners of 1915 Levis single-speed models.

Whitchurch. TONEY FLEX.

UNAPPRECIATED BELT DRIVE.

Sir,—Being in a fickle mood a few weeks ago I visited several well-known agents for the purpose of purchasing a solo "big twin," offering my three-months-old belt driven 500 c.c. machine in part exchange.

It gave me rather a shock to find that the average price offered for my machine ranged about 50 per cent. of the list price—the reply to my indignant protests in each case being, "People will not buy belt driven machines."

I do not blame the agents, but I think there is certainly something wrong with the public. I have owned several "all chain drive" machines and can say, without the slightest hesitation, that, compared with my present mount, the drive was harsh and the gear box generally unsatisfactory. This fact I did not appreciate at the time, but only since becoming converted to all belt drive.

For the solo competition rider all chain drive and a three (or four) speed gear box is undoubtedly "the thing," but why the remaining 95 per cent. of solo riders insist on these encumbrances is rather a mystery.

In Strasbourg during the Grand Prix week.
An American outfit bearing a French name.

A stable companion to my machine is a 350 c.c. all chain machine bearing a world-famous name. In eighteen months the owner has used his bottom gear once, and at low speeds he eases his clutch to avoid snatch—as per makers' instructions.

I should be the last to deny that trials and speed events have been tremendous factors in the evolution of the modern motor cycle, but if one effect of them is to send belt drive to the wall then, in my opinion, there is no doubt that they have done a tremendous amount of harm.

I should like to know what type of machine the "expert" would drive (solo) if all competition and trade considerations were put on one side. "GRADUA."

London, N.W.6.

GEAR-CHANGING PROCEDURE.

Sir,—In reply to "Ug Chugalug's" letter, is it really the makers' fault, or carelessness on the part of the rider?

Some makers in their instructions advise one to lift the exhaust when changing. Is the clutch just for ornament? To change down perfectly without harming gears, transmission, or tyres, one must declutch and slightly accelerate the engine. One cannot accelerate with the exhaust valve lifted, and it is impossible to engage two gear wheels travelling at different rates without grating.

Another point: why do agents instruct their customers—and also do it themselves—to change right down when stopping? In most cars one can get straight from any gear into free, while in most motor cycles one must change through second before free (neutral) is reached; hence my motto—"Wait until the *omnibus* stops."

Durham. UNUSUAL DISCLAIMER.

Sir,—Referring to the remarks made by "Ug Chugalug," I should like to say that, in my opinion, changing gear by lifting the exhaust is a much neater way in that it is effected much more quickly than when declutching. Moreover, it need not earn the reputation of harsh control, and saves clutch wear by a good deal. I am referring to Sturmey-Archer gears, but being young in experience I am open to hear and perhaps to profit by the advantages of declutching when changing gear. TRIUMPH-4H.P.

Spilsby.

"BORN 1909, ——!"

Sir,—Perhaps my experience on an old Triumph may be of interest to your readers. The machine has a 1909 engine, which, when I bought it in 1920 was in excellent condition, having been rebored, etc. I did 4,000 miles on it before overhauling last spring. No new parts were required, but I noticed the small end was rather slack. So I decarbonised and ran for another 1,000 miles, mostly with a pillion passenger. My last run was from Staines to Brighton and back. On the outward journey it was not its usual self, the petrol consumption was high, speed was lacking, but hearing no unusual noise I carried on, thinking an overhaul was due. On taking off the cylinder, I found to my surprise both piston rings were in pieces and a segment 1½ inches was missing from the top ring. Proceeding further I found the gudgeon pin was in half, and a piece was missing from the small end bush, also the valves looked as if they hadn't been seating for years. Can anyone tell me where the piece of piston ring and small end are? The cylinder is not scored. I had intended getting a more modern machine, but after taking me over a hundred miles in that condition I feel I can't desert the old 'bus now, so I am having her modernised, and am waiting in pleasant anticipation for many more happy days astride the

London, W.11. TRUSTY TRIUMPH.

A miniature for the War Office. This little 165 c.c. Economic has just been delivered for special messenger work.

A fine ascent of a freak hill. E. H. Hughes (398 c.c. A.B.C.) climbing Sibbs Hill, a rival to the famous Beggar's Roost. Sibbs Hill was the scene of a recent impromptu hill climb by Exeter motor cyclists when Hughes made the best performance against several machines of a larger capacity.

SAFEGUARDS FOR THE SECOND-HAND BUYER.

Sir,—While congratulating "Ex-D.R." upon getting so well out of a deal with an apparent crook, it must be noted that his own procedure was far from businesslike.

He states that the agreement was to send half the purchase money to the vendor, when the latter would put the machine on rail for approval. He goes on to say that he sent a post-dated cheque, *i.e.*, that he sent a worthless piece of paper. Had I, or any other business man, been in the vendor's position (but, of course, operating a straight deal) I should not have moved a hand towards despatching the machine until the cheque had become due and been collected.

I agree with "Ex.-D.R." that the only proper system, apart from a personal call, is your deposit system.

J. STUART WHITE.

WHO ORIGINATED THE CRASH HELMET?

Sir,—The crash helmet was in common use in the early days of flying at Brooklands and elsewhere. The Hon. Alan Boyle wore one when he crashed at the Bournemouth meeting in 1910, and, if I remember rightly, the late Hon. Charles Rolls had one on when he flew across to France and back without landing overseas. J. MORSE SCOTT.

Sir,—I believe I can lay claim to being the oldest rider on the English track to use a crash helmet on all occasions from 1906 until I gave up track work.

This crash helmet can be seen here at any time, bearing a few marks which can show its use, and what it saved my head on two occasions; it was sent me at my request from Paris by Mr. Geo. Barnes (then called "Cannon-Ball Barnes," in France) in the autumn of 1906.

I have several cuttings from *The Motor Cycle* during 1907, 1908, 1909, etc., of myself wearing this helmet, one occasion being at the Olympia Sports at the Stadium.

Maybe someone else, perhaps Barnes himself, used one in England before me, but I do not remember it, nor have I heard of anyone. DUDLEY R. CLARKE.

[In the article which has aroused this correspondence, Dr. Eric Gardner was given credit for originating the present "rim-less" helmet; the older type was, of course, in use many years before.—ED.]

R.A.C. SALUTES.

Sir,—I cannot understand any educated man wishing to be saluted by road patrols, but to a certain type that saw little of the army, such cheap homage (paid in advance) should please such simple folk.

Personally, I think saluting by the R.A.C. patrols should be stopped, as it is quite unnecessary.

London, W. CHISWICK.

Sir,—In reply to "Ken Bush," I also have repeatedly noticed an absence of salutes—within this last year's riding particularly.

This has given me an uneasy feeling, after passing patrols, as to whether "all's well"; yet to pull up and inquire the reason means not only a possible waste of time, but if it were only an oversight, a sense of snobbishness also.

Birkenhead. 40144 OR THEREABOUTS.

SOLDERING BOWDEN NIPPLES.

Sir,—It may be of interest to Mr. A. E. Bottomley and others to know that in our frequent tests of our wire mechanism, soldering, etc., we have invariably found that a properly soldered nipple will hold while the stranded wire cable will break, not at the nipple, but at a place that has not been heated. There must be something wrong with the method of soldering if the wire breaks at the nipple after heating.

The wire and nipple should never be held in an open fire or gas flame when soldering. For ordinary purposes, the method recommended by "G.R.H., Cambridge," is quite suitable. Our own method is not, of course, applicable, but it may be of general interest to state that we use a bath of molten solder, maintained at a constant temperaure of 400° Centigrade, into which the nipples are dipped.

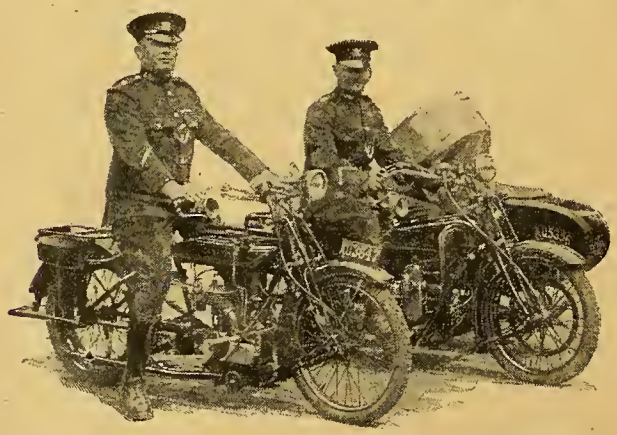
We tremble to think of the consequences to us if our soldering resulted in our wires breaking in the manner suggested by your correspondent.

p.p. BOWDEN WIRE, LTD.,
James R. Nisbet.

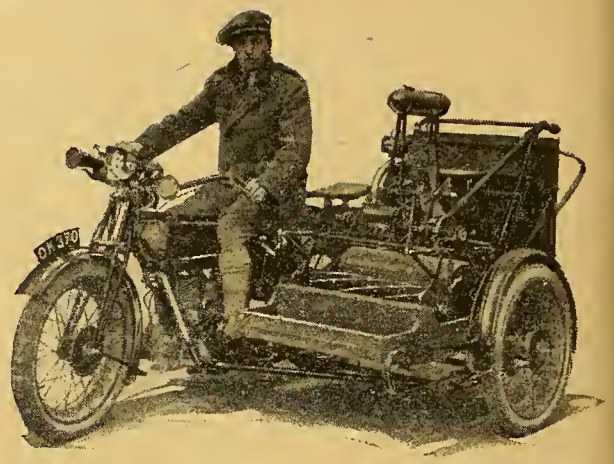
GUILDFORD HILL.

Sir,—Is it not time motorists in general organised some form of protest against the absurd and stringent speed regulations imposed on vehicles ascending the bad hill in Guildford Town. As all motorists know, this road is very wide, and has no side turnings to speak of, and the police seem to have no discretion as to what is a reasonable speed. On Sunday evening they seem to have been particularly busy. A friend of mine, among others, was coming up the hill at certainly not more than 12 m.p.h., and was promptly pulled up and accused of doing 25 m.p.h., which was absurd, as you will agree when I tell you that the machine was over 18 years old and has a fixed gear, the engine being an old Antoine of 3 h.p. I suggest it is about time motorists combined and boycotted the town, as was done in the case of Reigate some years ago. The Kingston police have a dangerous town to look after, so have an excuse, and are to be admired at the way they carry on during busy hours, but the Guildford police have yet much to learn if they wish to win the respect and assistance of the motoring public. What is the matter with the big motor associations which are still crying out for members and seem to be idle?

S.W.8. OLD MAN HEP.



The Nottingham police authorities were among the first to recognise the value of the motor cycle in police work, and have for several years employed sidecar outfits. These two machines—a Campion and Raleigh, both made locally—are recent additions to the fleet.



A Rudge sidecarrier built specially for the use of the Atco motor lawn mower representative, who uses it for the conveyance of this speciality—a lawn mower fitted with an air-cooled two-stroke engine.

SECURING SILENCE.

Sir,—The chief offenders in the matter of noisy exhausts are those riders who, in an endeavour to give a sporting appearance to a standard machine, have detached the silencer and fitted instead a plain, straight through pipe. These machines are often offensively noisy, and are a danger to other road users, for their riders must often fail to hear what, with ordinary silence, would be an audible warning.

But what I fail to understand is the purpose of these beautiful shining pipes on any but a specially designed speed mount. As most riders will know, the object of a long, clean, exhaust tract is to obtain at high piston speeds a small back pressure, and, in addition, an "extractor action" at the end of scavenging, due to the momentum of the rapidly moving gases. This extractor action is only of value at the end of the exhaust stroke, and to obtain full advantage of it a long period of valve opening over T.D.C. is necessary. For obvious reasons makers do not time their machines in this manner, and unless a bad design of silencer was previously fitted, a very small gain in maximum power can hardly be worth the consequent noise. Manufacturers of sporting machines usually fit such pipes, but they seem to have ensured that they are reasonably quiet.

Until recently but slight attention was given to silencer design—a case of delicate compromise. Lack of space in which to fit a silencer of really adequate capacity is a most detrimental factor in efficient muffling. It seems to me that the best position for the silencer is near the rear wheel at the end of a long pipe with easy bends. Gas momentum is made use of, and on entering the silencer the gases will have diminished in pressure and volume. Hot gases flow more easily than cold. The silencer is then in direct line with the direction of flow; an injector action can be combined with it by taking advantage of the force of the wind, which is strongest when most desirable. In this position the silencer should be easily detachable for cleaning, etc.

Silencers and piping of sonorous designs and metals, such as brass, copper, aluminium, are inclined to be noisy. The explosions set up ringing vibrations in the metal. These can be damped by sheathing in asbestos; but this impairs cooling. Some cast metal silencers have quite a bell-like tone

Strasbourg, July 12th.

500 c.c. class (Course distance 249 miles).

FIRST	Bennett (Sunbeam)
SECOND	Hassall (Norton)

250 c.c. class (Course distance 166 miles).

FIRST	Davison (Levis)
SECOND	Sallot (Thomann)
THIRD	Cottin (Velocette)

and RECORD LAP (Hassall on Norton)

The riders' praise for the tyres that carried them through.

Copy of telegram from ALEC. BENNETT:—
"First 500 class French Grand Prix on Dunlop tyres which gave no trouble showed absolutely no wear and were perfectly steady on the wet roads a product without equal."

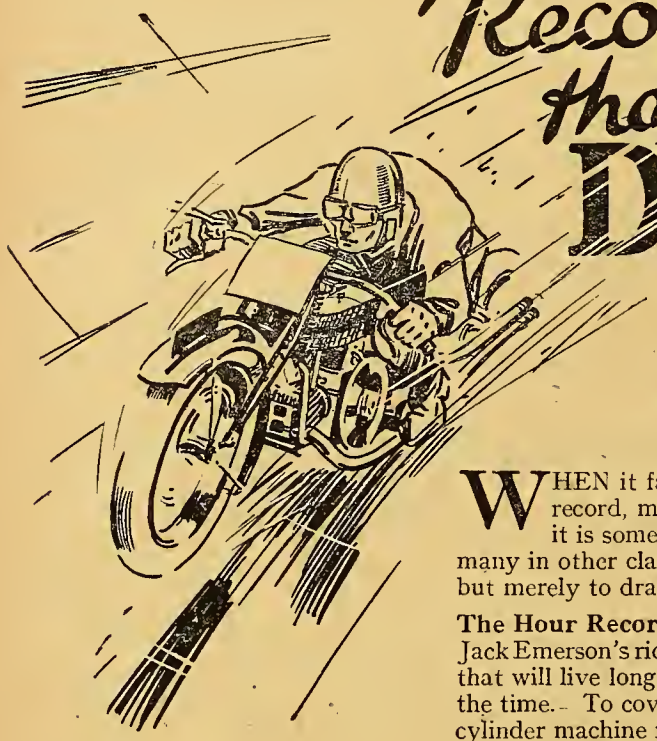
Copy of telegram from H. W. HASSALL:—
"Second on Norton Dunlop tyres were excellent."

Copy of telegram from G. S. DAVISON:—
"Finished first Levis on Dunlop tyres 250 class French Grand Prix your tyres absolutely perfect no wear visible on either cover no trouble at all."

ALL ON DUNLOP TYRES

FOR SPEED, SECURITY AND CERTAIN SATISFACTION — SPECIFY **DUNLOP.**

In answering this advertisement it is desirable to mention "The Motor Cycle."



Records that have made Douglas Famous!

WHEN it falls to the lot of one particular machine to gain a single record, much ado is made about the feat. In the case of Douglas it is somewhat different; as they hold most in their class and so many in other classes it is impossible to proclaim the importance of all, but merely to draw attention to the very outstanding rides.

The Hour Record is considered the "Blue Riband" of all records and Jack Emerson's ride when establishing this and the **50 Mile Record** is one that will live long in the memories of Brooklandites who were present at the time. To cover **78.91 m.p.h. in 60 minutes** on a little 500 c.c. twin cylinder machine is extraordinary, and proves the stamina and reliability of the twin opposed engine and its superiority over all other types.

On the same day the **50 Mile Record was established at 78.77 m.p.h.** Both these records are World's Records.

Another outstanding ride was that of C. G. Pullin in covering the **half mile at 100.61 m.p.h.** electrically timed at Brooklands on March 23rd. On the same day the extraordinary figures of **99.58 m.p.h. for the mile and 97.57 m.p.h. for the kilometre were established,** beating all existing records, proving again that the twin cylinder engine is not only faster over a longer distance, but the fastest machine of its type in the world. It must not be forgotten that only 12 months ago the 1,000 c.c. machine first reached the extraordinary 100 m.p.h. mark.

The surprising performance of the **3½ H.P. Douglas and Sidecar** was also established by Cyril Pullin, when he covered the **kilometre at 77.14 m.p.h.** and the **mile at 76.49 m.p.h.,** with a little 494 c.c. engine carrying sidecar and passenger. Compare this speed with any previous speed put up on a similar size machine and you will be amazed at the difference.

On the smaller machine, the record of **400 miles in 400 minutes by Tudor Thompson on a 2¾ H.P. Douglas** still remains as the finest ride on that size machine ever accomplished. It appears that the record is going to stand some time, and the little engine that could average this speed over such a distance is certainly one for which reliability and general efficiency of unequalled quantity can be claimed.

In all, 86 records have fallen to the lot of Douglas, including World's, British and Foreign establishments. The 500 c.c. British Championship, 750 c.c. British Championships, 500 c.c. Scottish Championship and the Championship of Germany are also to its credit and are

Performances which bring fame to the name of DOUGLAS.

DOUGLAS MOTORS Ltd., 30, Hanham Rd., KINGSWOOD, BRISTOL.

THE BATTLE OF TYPES.

Sir,—May I offer a protest against Mr. Jack G. Newbigging's letter on the subject of "The Beginner's Mount"?

In regard to his first objection, J. G. N. does not apparently understand the situation. The question that was being discussed, as I understand it, was whether a *small* two-stroke, or a *small* four-stroke, is more suitable for the average schoolboy as his first mount; and not whether a baby two-stroke possesses any advantages over a Brough Superior or Harley-Davidson. Also, may I ask why he thus condemns the two-stroke?

If he thinks that two-strokes are so "ineffective," how does he account for the success of the Scott-Squirrel and Levis in this year's I.O.M. races; and for the latter machine's win in the 1922 "Grand Prix"? Incidentally, I possess a Levis two-stroke, and have never noticed the defects which he mentions.

I am sure that none of those who have ever possessed a Levis or Scott can complain of "wooliness" in the exhaust; yet neither of these bicycles are as noisy as the "super-revving," o.h.v. 350 c.c. four-stroke.

As for "petrol-drinking," my mount can do the 120 m.p.g. as guaranteed by the makers with ease.

I admit that the average 250 c.c. two-stroke is not a match for the 350 c.c. sporting mount in speed; but I am sure that it absolutely heads the list in its own class.

With regard to the second point in J. G. N.'s letter, I uphold the writer of the article, as I think that, taken all round, the reliability of *all* classes of modern machines is marvellous. What other kind of petrol-driven vehicle could stand the Scottish Six Days—excepting a Rolls—without "konking out" or retiring? Yet out of the 119 starters for the event this year 64 per cent. finished; and of the finishers 64 per cent. got "golds"! D. A. BEATTIE.

HANDLEBAR WATCH DIFFICULTIES.

Sir,—In reply to Mr. D. L. W. Awburns' letter, the trouble he has is quite common among modern watches of the cylinder type, and is due to a technical fault too lengthy to explain.

If the winding stem is pulled out to set the hands and the hands are turned backwards and forwards I think he will find the watch will start off quite easily. (Winding the hands backwards is in no way detrimental to a modern watch.)

LISS.

LET THE BEST MAN WIN.

Sir,—May I suggest to the B.M.C.R.C., through your columns, that there should be at least one *scratch* race for each class at its very excellent race meetings? No one will deny that a good handicap provides an excellent race (the finishes of many handicaps at Brooklands this season have been most spectacular); but, on the other hand, most people like to see the best man win, and I think I am voicing a widely held opinion when I say that men who have the skill and courage to lap at 80 to 90 m.p.h. deserve to stand a chance of scoring a win at least once during the afternoon's sport.

Let us have handicaps by all means, and plenty of them, but why not, say, one scratch race for each class during the afternoon, to give the fast men a chance of scoring the successes they deserve? G. K. RAE.

SIDECAR ON SOLO LIGHTWEIGHT.

Sir,—My letter over the initials "H.S." (which, incidentally, should read "J.R.J.") has called forth two replies in your last week's issue, and I am taking this opportunity of replying to both at one and the same time.

I mentioned that I could average 30 to 35 m.p.h. with a loaded sidecar and my 350 c.c. Douglas. I again repeat that statement, but with this qualification: I do not guarantee to keep up that average on a 100-mile run through various cities and towns, for the simple reason that my engine in time would naturally become over-heated through changing down, etc. However, on a short run of about 30 to 40 miles on a tolerably good road, I should be extremely surprised if I could not keep up the average named.

Mr. Williams continues: "I should imagine 35 m.p.h. average impossible even with a solo 350 c.c. Douglas." May I in return inform Mr. Williams that on the 17th inst. I left Birkenhead on my 350 c.c. Douglas (solo) at 10.15 a.m. and arrived at Birmingham at exactly 1.5 p.m., a distance of 97 miles. The average m.p.h. works out at 34.2, and, when it is considered that the rider en route had to pass through no less than five towns (Birkenhead, Chester, Whitchurch, Newport, and Birmingham), perhaps Mr. Williams may in future alter his opinion about the 350 c.c. Douglas.

Mr. White would like to know how I keep my engine cool? After the above-mentioned ride from Birkenhead my engine was warm—not hot; immediately after luncheon on the same day I set out for Stratford-on-Avon with a pillion passenger and again kept up an average of about 30 to 35 m.p.h. All hills were taken either in top or second, and anyone who knows the road in question will not dispute the fact that there are two or three severe tests in hill climbing.

My machine is a standard one; I look after it well, and am fairly generous towards it with oil. J. R. JONES.

GOGGLES AND HEARING.

Sir,—Perhaps "Sutton Bank" will be pleased to know that his failing to hear while wearing goggles is quite a common experience, and is mostly due to pressure on the nerve channel in direct communication with the drum of the ear. It is also possible in some cases for this nerve to effect the whole system, causing the rider to get the "wind up" when in a tight corner.

There were illustrations in the issue of *The Motor Cycle* of June 8th, of a device known as the "Phace" screen, which not only overcomes this trouble, but protects the whole of the face, neck, and chest, and prevents the wearer from inhaling the dust. Goggles, unfortunately, have another failing—entirely obliterating the view by fogging, which often proves more uncomfortable than loosing one's hearing; the "Phace" screen does not fog. PHACE SCREEN.

Southsea.

VALVES THAT CONTRACT WHEN HOT.

Sir,—I was very interested in the statement made by your correspondent, "HP 1677," in *The Motor Cycle*, to the effect that his exhaust valve contracts when hot and expands again on cooling.

For the last few months I, also, have been using an exhaust valve in my 550 c.c. Triumph, which produces the same phenomena. If the tappet is correctly adjusted when the engine is cold, then after about twenty miles' running the clearance has increased to three or four times the original. On the other hand, if the tappet is adjusted correctly when the engine is hot, then on cooling down there is no clearance at all, and the valve stem presses on the tappet, thus preventing the valve from seating properly.

I might say that the tappet locknut is always securely tightened, so there is no question of the tappet head having worked loose. OH 4634.

Birmingham.

Sir,—May I suggest that the cause of the exhaust valve seeming shorter when hot is that it is made of an alloy steel with a smaller coefficient of expansion due to heat than cast iron, with, I should imagine, a high proportion of nickel. W. T. JACOBS.

Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM."
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."
Eighth Edition. Price net, 2/-. By post, 2/3.

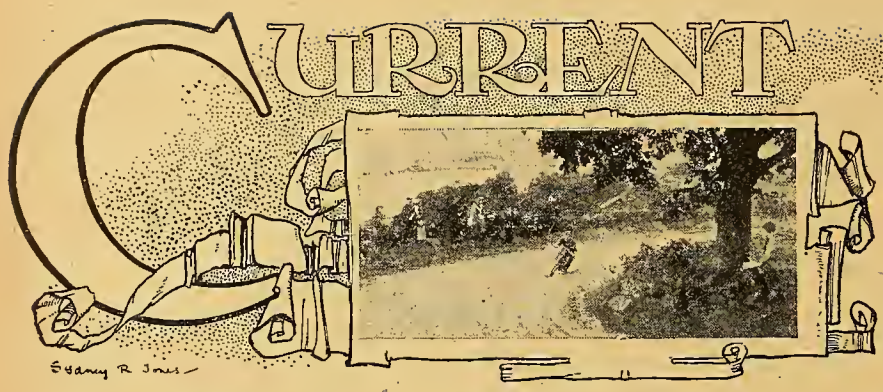
Paper Boards. Price, 2/6. By post, 2/9.

"THE MOTOR CYCLE" ROAD MAPS.
Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.



Special Features

TO STRASBOURG.
SCOTLAND AND THE MOTOR CYCLIST.
WHAT IT COSTS TO TOUR.

Times to Light Lamps.

July	27th ..	9.25 p.m.
,,	29th ..	9.22 ,,
,,	31st ..	9.19 ,,
August	2nd ..	9.15 ,,

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

No Motor Cycle Events at Southsea.

Possibly because the proposed event clashes with the English Six Days Trials, the A.C.U. has refused a permit to embody motor cycle speed events in the Southsea Carnival. The car races, of course, are not affected by this decision.

Finding the Way.

Why is it that some parts of the country are so much better signposted than others? In certain counties, however hard one tried, it would be difficult to lose the way, even in the most unfrequented lanes; in other districts the mapless rider welcomes the occasional signpost as a long lost friend.

Truly Unsolicited Testimonials.

Every day we receive letters commencing, "Having seen in your Correspondence columns testimonials to the promptness and efficiency of the spares service, etc., of various firms," and going on to describe good treatment which the writers themselves have experienced. The curious part of the business is that actually they have *not* seen such letters in our Correspondence columns; so many are received that to publish them all—the only fair way—would mean excluding all the other interesting subjects discussed week by week under "Letters to the Editor."

Lighting-up Times.

Trouble has apparently arisen through readers failing to appreciate the value of the footnote hitherto appended to our lighting up tables to the effect that one number-plate should be illuminated half-an-hour earlier than the times stated. In future, therefore, our tables will give the actual times at which lamps must be lighted to comply with the number-plate aspect of the case. When the lamp illuminating the number-plate can be independently controlled the driving lights and rear light need not be brought into use until one hour after sunset or half-an-hour after the times tabulated.

A.C.U. Prize-winners.

First prize of £100 in the A.C.U. competition inviting ideas for demonstrating the advantages of membership has been awarded to Mr. A. C. Gilman, 22, Rowden Road, Beckenham, Kent. Second and third prizes of £50 and £10 have been won by Mr. R. Beal, 6, New Street, York, and Mr. A. C. Godfrey, Hambro Lodge, Dachet, Bucks, respectively.

Impromptu Silencers.

When it was first decreed that motor cycles should make less noise on Brookland's track, the ingenuity of some of the riders was severely taxed. On the day of the fourth members' meeting of the B.M.C.R.C. the Saturday before last, several members were apparently unaware that the rule of silencers was to be strictly enforced at once, and open exhausts were numerous. The quick change alterations made to comply with the new regulation were humorous and clever. In many cases quart oil tins of various well-known makes added an artistic touch to the exhaust arrangements when employed as expansion chambers!

Another Record.

Seven foolscap-size folios of type-script were necessary to record the full time and formula results of the motor cycle classes at the recent Westcliffe speed trials—and, even then, no machines were specified!

A Caution.

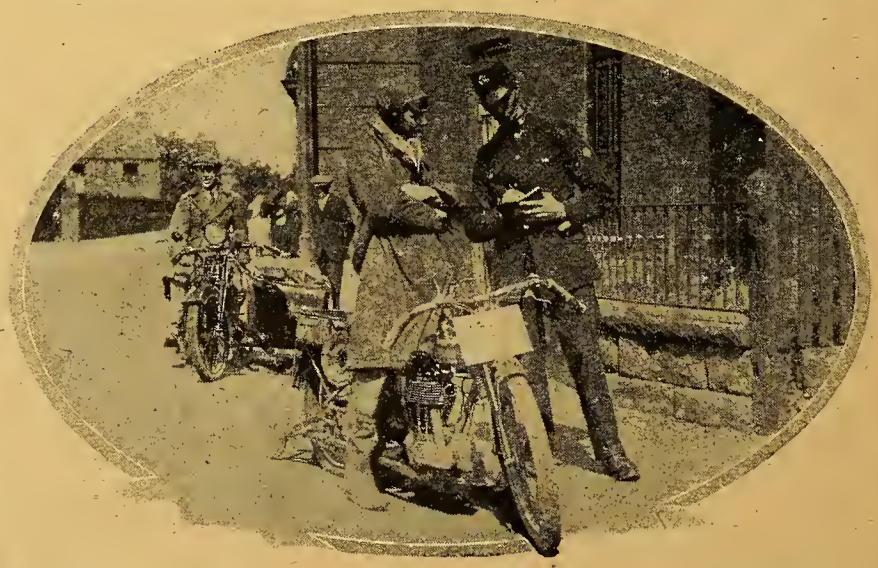
We are informed that police activity is being exercised in the Hexham district; the chief offence to be guarded against apparently is "furious driving" on account of which there have been several convictions lately.

A.C.U. Consul for Lincoln.

Mr. G. A. Weatherill (the Schoolhouse, Holton-le-Moor, Lincoln), who has written in our pages on camping with a trailer caravan, has been appointed by the Auto-Cycle Union as its local consul for the district.

Veterans' Race at Brooklands.

Commencing at 2 p.m., the fifth members' meeting of the B.M.C.R.C. will be held at Brooklands on Saturday, August 12th. The programme will include five three-lap handicap motor cycle races in the various classes. Event six will be a three-lap veterans' handicap for motor cycles and passenger machines of any class, driven by a member of the club over forty years of age. The last event will take the form of a three-lap private owners' handicap.



HIS UNLUCKY DAY. A competitor in the Liverpool Motor Club's recent reliability trial whose luck was out. After failing to climb the formidable hill at Helsby (Cheshire), he returned to the village, where he fell into the hands of the police for an alleged technical offence regarding his brakes.

A Motor Cyclist Clown.

Joha, the F.N. rider in the Belgian Grand Prix, is a clown by profession.

Costly Roads.

No less than £420,000 was spent on the roads of Northumberland during 1921.

More Motor Cycles for China.

Last year motor cycles imported into China totalled nearly four times the value of those in 1919.

Traffic Control in the Potteries.

The chief constable of Stoke-on-Trent has intimated that he may shortly have to ask for a sidecar outfit to be used for overhauling recklessly driven motor vehicles.

Have You Seen It?

We have received a request from the Consul-General of Mexico, 25, Craven Road, London, W.2, for the address of the makers of a flying motor cycle, supposed to have been manufactured and marketed in England. It is described as a motor cycle with folding wings, capable of flying short distances.

Prize Fund for 500 Mile Race.

Since the prize for last year's 500 mile race was won outright, the Motor Agents Association, Ltd., is endeavouring to raise the prize fund of £200 for the 1922 event. An appeal is being made to agents who are members of the Association to contribute to the fund, as it is felt that the event will help business. The awards subscribed for will be known as "Agents' prizes."

Disabled Drivers' Clubs in the Provinces.

In consequence of the success of the Disabled Drivers' Motor Club in London area, it is suggested that similar organisations be formed in other parts of the country. The secretary of the London branch (c/o The Disabled Society, 48, Grosvenor Square, London, W.1), will endeavour to put local parties in touch with each other if they will communicate with him.

Noisy Motor Cycles at Brooklands.

Col. Lloyd has recently complained of the noise of racing motor cycles on Brooklands track, while Mr. Locke King, who owns the track, has likewise protested. Noticing no improvement in this direction on the occasion of the last meeting, Col. Lloyd has informed the B.M.C.R.C. that unless there is much better silencing of exhausts at the next event, the track will be closed to the club.

Confusion Worse Confounded.

In a recent interim report on British standard nomenclature for automobile, motor cycle, and cycle parts much good work has been done by the British Engineering Standards Committee in unifying technical phraseology. One serious blunder, however, appears to have been made in naming the three main categories of motor cycles, which are described as "singles," "sidecars," and (cycle) "cars." The term "single" meaning a solo machine will cause endless confusion with the motor cyclist's familiar term of "single," applied to a machine with one cylinder.

Beware.

Motor cyclists should beware of the police activities at Hexham and Corbridge, near Newcastle-on-Tyne.

The late Mr. P. J. Evans.

The late Mr. P. J. Evans, who was killed in an air smash whilst returning from the Grand Prix race at Strasbourg, was buried in Birmingham yesterday.

Petrol Imports.

172,966,645 gallons of petrol were imported during the first half of this year, an increase over the corresponding period last year of 33,063,119 gallons.

Police Campaign Against Noise.

A correspondent writes warning motor cyclists against travelling through the Potteries district unless they have their machines fitted with an expansion chamber, and not a "straight-through" exhaust pipe. Apparently the police are showing signs of discomforting activity in this direction.

Fish-tails unpopular in Grimsby.

Some magistrates have held that the "fish-tailed" silencer is sufficient; but after attending a demonstration given outside the Court for his benefit, the Grimsby magistrate said in his opinion the "fish tail" was not a sufficient silencer, and he should insist on an expansion chamber being fitted to machines used in the town.

Motor Cycle Brakes.

A motor cyclist charged at Kingston for driving a motor cycle without an independent brake operating on the front wheel was successfully defended by the A.A. Cross-examined by the A.A. solicitor, the police could not deny that there were two independent brakes on the machine. It was, moreover, pointed out to the Bench that a case of this kind should not have been brought by the police merely on the legal knowledge of a constable, and that advice should have been taken before prosecuting. The Bench were therefore asked to mark their disapproval by awarding costs against the the police, which they did, awarding one guinea costs against them, and the summons was dismissed.

Motor Cycles in France.

In a recent 300-mile run across France we saw less than a dozen motor cycles outside the big cities. Motor assisted bicycles predominated.

Exchanges.

Among the articles offered in exchange for motor cycles in last week's issue were: a motor launch, piano, typewriter, and jewellery, organ, cinema camera, Bedford Buick car, a one-ton van, and a Singer coupé.

Poetic Licence!

Various stories are going the rounds of a motorist whose licence holder for quite a considerable period has carried nothing more than the label from a bottle of Guinness' stout. It sounds too good to be true; but, anyhow, the practice is not to be recommended.

Hill-climb Washed Out—Literally.

Rain storms that almost earned the title of cloud bursts made the surface of Kop Hill quite impossible for the North and North-West London Club's contest, which was to have taken place there on Saturday. Both clubs had mustered strong sides.

Further Entries in the Six Days.

In addition to the list of 126 entries for the A.C.U. Six Days' Trials already announced, the following names have been received:—F. Smith (926 Clyno sc.), N. Clayton Russell (633 Norton sc.), H. H. S. Harris (800 A.J.S. sc.), and J. H. Davies (entered by the N. Wales Centre A.C.U.), on a 599 c.c. Sunbeam.

Pre-war Survivors.

A favourite and seemingly increasing feature of present-day speed trials and hill-climbing events is the inclusion of a class set aside for enthusiastic members riding machines which first left the factory in the neighbourhood of 1914. It is remarkable, moreover, to notice the performances of which some of these veteran mounts are still capable.

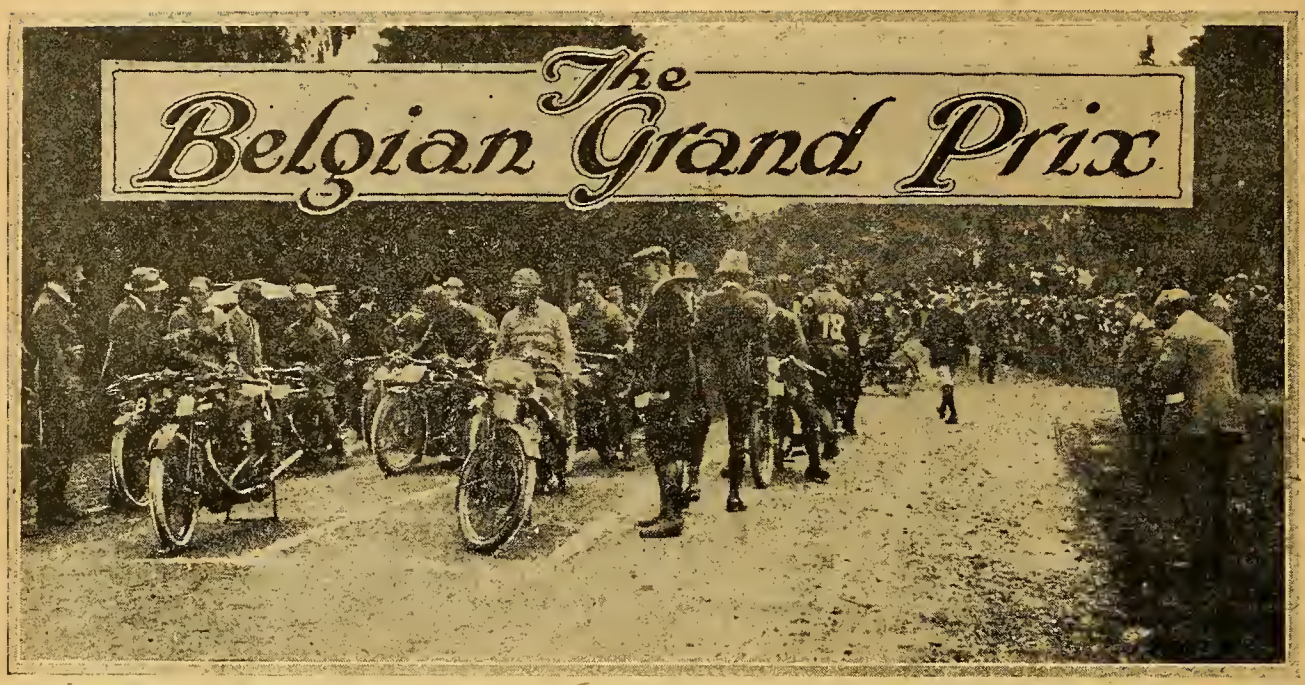
British Industries Fair.

The British Industries Fair, rapidly growing to be regarded as an important annual event, is being held next year (1923) in the Exhibition Buildings at Castle Bromwich, Birmingham, from February 19th to March 2nd. In previous years this fair has formed the meeting-place of buyers from all parts of the country, as well as those from countries abroad. Applications for space should be addressed to the General Manager, British Industries Fair, Chamber of Commerce, Birmingham.

Motor Cycle Licences.

The Ministry of Transport has just published the figures of motor licences issued from December 1st, 1921, to May 31st, 1922, and from these it is seen that the number of annual licences issued amounted to 272,950, and the approximate number of licences current on May 31st, 335,796. In addition to these the number of motor cyclists who availed themselves of the quarterly licensing arrangements equalled 78,606; 15,760 of which were taken out in the first quarter and 62,846 in the second quarter. Under this heading is included as many as 313 invalid motor vehicles.

The Belgian Grand Prix



Lined up and ready for the start of the Belgian Grand Prix. Dr. Lamborelle, Chairman of the Belgian Motorcyclists Federation is talking to A. Jackson (Sunbeam) who proved to be the winner of the 500 c.c. class.

British Riders win All Classes in Belgian Grand Prix. Heavy Rain Causes Many Retirements. Sunbeam, Levis, and Rush-Blackburne Machines Successful.

FRESH on the heels of their success in the French Grand Prix, British riders and machines swept the board in the big Belgian race last week-end.

Again, a Sunbeam was foremost in the 500 c.c. class, the rider being A. Jackson, a north countryman not yet well known in the racing world.

In the 350 c.c. class the winner, E. Remington, rode a Belgian assembled machine, the Rush, equipped with a Blackburne engine, while once more the 250 c.c. victory has fallen to G. S. Davison on the all-conquering two-stroke Levis.

If Bennett, after his French win, complained of the monotony of the Strasbourg circuit, English riders had no cause to do so of that utilised for the Belgian Grand Prix.

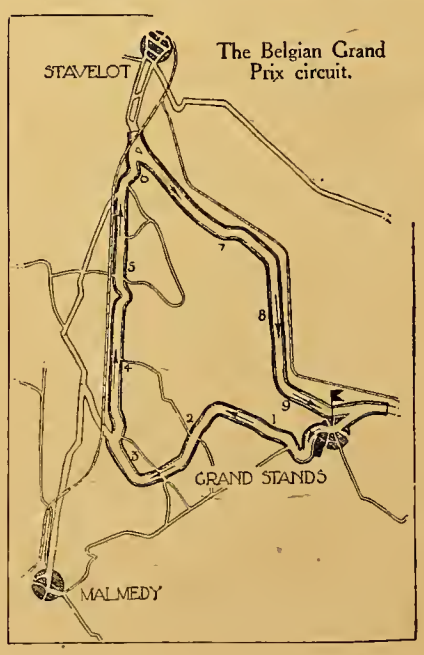
Whereas the one course consisted of a practically straight-sided triangle, with no gradients worthy of mention, the other is all ups and downs, and has corners enough and to spare.

Course Greatly Improved.

The Belgian course is approached from Spa by a hill—the Côte de Malchamps, of which there is no familiar counterpart in England, France, Germany, Italy, or Switzerland. It rises abruptly from the town with a consistent gradient of 1 in 10, has one easy bend three-quarters of a mile from its beginning, then one more, and then a gradient of 1 in 9, next an easy rise, making two miles of hill in all, and then a descent to the Francorchamps corner.

Thanks to the courtesy of Mr. Paul Kelecom we had an opportunity of carefully studying the course from a four-cylinder F.N. sidecar outfit, driven by Baron de Grady.

Much improvement was noticeable. Bridges had been widened and corners vastly improved. From the start opposite the grand stand the course is on the down grade, a bend over the first widened bridge follows, then another, after which the road rises sharply for some distance.



The Belgian Grand Prix circuit.

After the summit there is a fast down grade stretch to Burnenville, the old German frontier, then a greatly improved corner, a long straight, at the end of which is a curve followed by a bad hairpin. Next ensue fast stretches on an upgrade to a severe hairpin, also improved, which leads back to the grand stand—9⅜ miles in all. Immediately after its repair the surface must have been fairly good, but excessive pleasure motor traffic has done it no good, as it is inclined to be rough, and is quite loose at the corners.

The Race.

After a long spell of rain, fine weather favoured the morning of the race, and as the start was not till 10.30 a.m., everyone had a chance of being present.

From an early hour motor cycles held their sway on the roads, and at nine o'clock a continuous stream swept up the great hill from Spa. Fast cars there were in plenty, but motor cycle traffic predominated. It was hard to believe that so small a country as Belgium could contain so many of these machines, but it is so, and it is pleasing to note that British makes predominate. From the enthusiasm displayed it would seem that the Belgian Grand Prix would rapidly outshine the great French event, and all that can hinder its progress is the lack of experience of its organisers, who have hitherto run only one similar event.

Organisation this year, though capable of improvement, was not bad, and there were no such silly incidents as stopping

Belgian Grand Prix.—

men before they had completed the requisite number of laps, but it was not wise to have placed the scoring board at the side and to the rear of the Press stand, nor to have made the latter too flimsy and then to have crammed half of it with spectators so that it began to collapse and cause almost a panic just after the start. The rustic grand stand on the hillside was all right when the weather was fine, but on Sunday ——!!!

Threatening Clouds.

Alas! within half an hour of starting time clouds obliterated the sunshine, and heavy rain threatened. As usual, on the Continent, the men were started by groups according to classes. Edmond (Triumph) led easily at the start, being by far the smartest man off the mark. In the 350 c.c. class Eysdon, the British private owner of a standard A.J.S., was the first to reach the first corner, but, of course, he had no chance, and rode purely for the fun of the thing. Among the lightweights Handley (O.K.), whose riding throughout was remarkable, was the first away. Worse luck, the good weather disappeared at the very start; rain fell as the first batch left, and soon became a veritable downpour, soaking the roads, spoiling the speeds, and reducing the side of the course adjacent to the replenishment depots to a quagmire.

Rain blew in on to the press stand and wetted the scoring sheets, then the stand began to collapse, and before three laps had been covered all count of the men's positions had been lost.

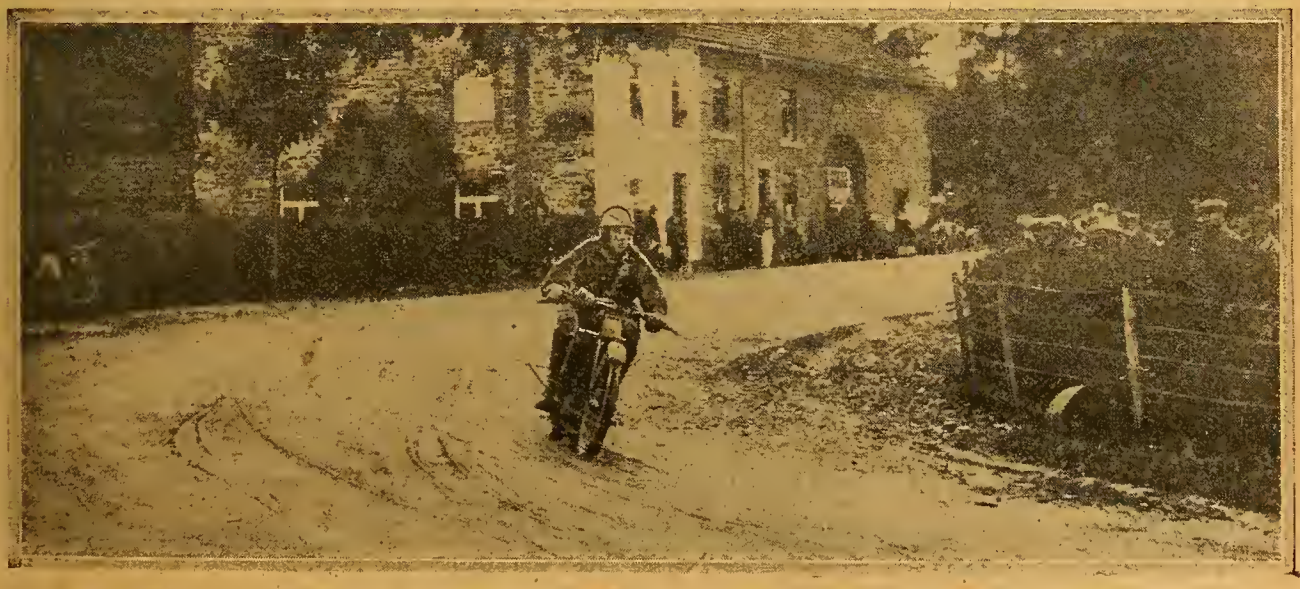
Among the Senior machines were several famous riders. Hassall, who won last year, was a clear favourite, Edmond was known to be fast, but the faults in his engine which had proved to be his undoing at Strasbourg had not been remedied. With such a strong team, consisting of Shaw, Walker and Hollowell (as well as Hassall), the Norton seemed well-nigh invincible, whilst the

Breslau, a Belgian Norton rider, taking the first corner comfortably. Edmond (Triumph) is the rider by the roadside.

Sunbeam was represented solely by Jackson, who, although he competed in the T.T., is a comparatively unknown rider. The Saroléas entered were there more to represent the honour of their country than anything else, as the machines were clearly not fast enough.

The rain which fell during the race naturally accounted for numerous incidents. As they approached the first corner the Norton brakes screamed as they were applied. Hollowell had water in the carburetter on his sixth lap, and by then had had two tumbles. Edmond was out in his third lap with magneto trouble. Thys, another Triumph rider, had retired. Pélissier (Motosacoche) retired before covering one lap owing to a cracked cylinder head. Stolz (Norton) only survived one lap, while Delvigne (Indian) lasted out but two.

Of the Juniors, the new overhead valve F.N.'s clearly had it all their own way, while Davison (Levis) was busy leaving all the lightweights behind. Growing lap times were posted every two



H. W. Hassall (Norton) rounding the Francorchamps corner. He had every prospect of winning until he suffered tyre trouble on his last lap.

Belgian Grand Prix.—

laps with fair regularity, and lap leaders were likewise announced.

After six laps, Hassall (Norton) was well at the head of the 500 machines. His was obviously the fastest mount on the course, and as early as the first lap he was leading by half a mile. His colleague, Walker, ran second, while Jackson (Sunbeam) was third. In the 350 class, Claessens (F.N.) was travelling well, rapidly creating the reputation of the new model, and an almost certain runner for the fastest lap if not for a win for his category. Reinartz (Gillet) occupied second place, while Fraser (Sheffield-Henderson) was running third.

After Davison in the 250 class, Handley (O.K.) was second, and Kershaw (New Imperial) was third. By this time, Woods (O.K.) was suffering from water in the magneto, and though he pluckily tried to remedy the trouble it eventually got the better of him.

At this stage we had a chance of a chat with the unfortunate Edmond, who had reappeared carrying broken magneto parts in his hand. He told us he thought the course more sporting than the French one, but that it had suffered through being improved too late. He considered the French organisation to be better.

Many men were by now retiring or experiencing trouble. Fraser (Sheffield-Henderson) who was promising well, was using the frame of one of the machines used in the T.T. A halt at the Norton depot brought the news that Hassall had covered eleven laps and had not yet stopped to replenish, Hollowell had lost a footrest and Walker was behind time.

A Lull in the Storm.

The rain had now stopped, and there followed a welcome respite from the drenching wet which was taking its toll of riders.

Pierard (Gillet) had retired like many others owing to magneto troubles, while Kershaw (New Imperial), who had actually been leading, had been delayed. News was heard at the Triumph depôt that Antoine was the sole survivor.

Another unfortunate among the lightweights was Whalley (Massey-Arran), into whose magneto water had entered. Reinartz (Gillet) overshot his depôt while trying to stop so as to replenish and rode back in the reverse direction. This would have raised a storm of protest in France, but no one seemed to mind here.

After Ten Laps.

At the end of 10 laps the first three men in each class were

500 c.c. Class.
H. W. Hassall (490 Norton).
A. Jackson (482 Sunbeam).
J. W. Shaw (490 Norton).

350 c.c. Class.
F. Claessens (349 F.N.).
Reinartz (349 Gillet).
E. Remington (349 Rush-Blackburne).

250 c.c. Class.
B. Kershaw (249 New Imperial).
W. Handley (249 O.K.).
G. S. Davison (247 Levis).

Remington's Rush is a Belgian built machine with a Blackburne engine. Claessens was leading by a lap, and there seemed every prospect of the old-established Belgian firm making its reappearance in racing in a somewhat sensational manner. Thus it seemed at half-time, but the F.N. team had had its casualties, and the brilliant Claessens was fated to fall out with a broken chain and magneto trouble. Meanwhile things were happening in the other classes.

At half-time, though Hassall was still leading, Jackson (Sunbeam) had had to cede second place to Shaw (Norton). At that moment Claessens (F.N.) was still enjoying his meteoritic ride to glory, while Remington (Rush) was running second and no third man had been posted. These gaps in the lists of leaders and also on the scoreboard were annoying.

Davison in the Lead.

Among the lightweights Davison (Levis) had regained his accustomed roll of leader, and Handley (O.K.) ran second. Apparently Fraser (Sheffield-Henderson) was third, but the notice-board preserved a discreet silence on this point.

Dame Fortune was still busy thinning the ranks. News came in that the ill-fated Walker was forced to retire owing to a broken crank pin, Huynen (F.N.) had withdrawn owing to a broken valve, and Claessens was now missing. Thus failed a gallant attempt on the part of an indigenous firm to wrest the laurels from the British invader. We wish them better luck next time.

When 20 laps had been completed Jackson (Sunbeam) had wrested first place from Hassall (Norton), and the plucky Antoine ran third, thus gallantly upholding the honour of the Triumph. In the 350 c.c. class Fraser (Sheffield-Henderson) was leading, and had apparently every chance of winning, while Remington was second, and in the baby class Davison (Levis) was still at the top. Towards the end of the race there was great excitement. All prophecies as to who would win seemed like being upset.

Beaten in the Last Lap.

Hassell, having by far the faster machine, easily overhauled Jackson once more, who was covering his final laps with a butt-ended inner tube trailing in the mud. Then the puncture or tyre fiend eventually settled the Norton rider, as passing with a flat rear cover, he yielded the winner's place to the ever victorious Sunbeam. Fraser seemed certain in leading the Sheffield-Henderson to victory, but he dropped back and Remington took his place. Meanwhile, as they had only 20 circuits to do the lightweights had finished, and Davison received the customary bonquet, having won by a clear lap.

THE WINNERS.

500 c.c. Class; 28 Laps—261½ Miles.

T. Jackson (492 Sunbeam), 5h. 15m. 42s.
— Antoine (499 Triumph), 5h. 21m. 47s.
H. W. Hassall (490 Norton), 5h. 29m. 58s.
Winner's speed (approx.), 49¾ m.p.h.

350 c.c. Class; 24 Laps—224 Miles.

E. Remington (349 Rush-Blackburne), 5h. 23m. 18s.
A. Fraser (348 Sheffield-Henderson).
Winner's speed (approx.), 41½ m.p.h.

250 c.c. Class; 20 Laps—186¾ Miles.

G. S. Davison (247 Levis), 4h. 18m. 43s.
W. Handley (249 O.K.), 4h. 32m. 35s.
Vermander (248 Griffon), — — —
Winner's speed (approx.), 43¼ m.p.h.

NEW OVERHEAD VALVE RACING F.N.

PROBABLY forerunners of an excellent sporting mount and almost certain runners in the next T.T., the new 348 c.c. F.N. racing machines embody many new features.

The fact that the steel plates forming brackets for the support of the o.h.v. gear are similar in design to the A.J.S. gives the first impression of a similarity to that engine, but there the similarity ceases.

A detachable head is employed which is heavily finned, especially round the exhaust port. Over this head lies a stirrup resting in a groove between the fins and secured by long holding-down bolts with nut couplings at their base and ball-joints on top. Long push rods actuated by the cams through the usual levers in the timing gear serve to operate the overhead valve mechanism, the shafts of which run in roller bearings.

Lubrication is effected by means of a Best mechanical lubricator, while a separate oiling arrangement lubricates the front chain. It is interesting to note that the English type gear box and the English forks comprise many parts made in the F.N. factory. A Bosch magneto and an Amac carburetter form part of the equipment. Each of these machines had to climb Malchamps Hill at high speed, and in practice one did so at 60 m.p.h.

ANGLO-DUTCH TRIAL POSTPONED UNTIL SEPTEMBER.

LAST week Mr. Van Turenhout, of the Royal Dutch Motor Cycle Club, paid a visit to the Auto-Cycle Union and interviewed Colonel F. S. Brereton and Mr. E. J. Bass, in connection with the Anglo-Dutch Trial.

It appears that the Dutch Club sent a letter to the Secretary of the Auto-Cycle Union on July 3rd giving the particulars asked for. This letter never arrived, and on July 5th the Auto-Cycle Union wired to Holland for the necessary details, such as rules and route. Presuming that the letter of July 3rd had been delivered, the Dutch officials ignored the communication. Consequently, a misunderstanding arose; the Auto-Cycle Union naturally thought that the Dutch officials were slack, and the Competitions Committee decided to abandon the trial. Now the matter has been brought before the Management Committee, and it has been decided to hold the trial from September 15th-18th. The British team will be selected forthwith, and will be due to cross over to Holland on September 14th.

SPORTING HALF-DAY TRIAL.

Medley of Water-Splashes, Hills and Hairpins in South Birmingham M.C.C. Trial for the Avon Cup.

EVEN Midland motor cyclists may be surprised to find that it is possible to lay out a first-class sporting trial's course within a radius of fifteen miles of Birmingham. Yet this feat was accomplished by the organisers of the South Birmingham M.C.C. half-day trial for the Avon Cup, held on Saturday.

Excepting Beacon Hill hairpin and one or two deep fords, the course, in itself, provided no great difficulties, though to average 20 m.p.h. over a twisty route with an obstacle every few miles is none too easy, and this difficulty was increased by poor route marking in certain sectors.

In places the blue stain was too faint to be seen without careful search; frequently it was laid after the turn only, instead of being placed as a warning before. This led to considerable delays and not a few competitors got off the course, rejoining the route further on. Two ladies were amongst the forty-eight entrants, Mrs. Janson (247 Levis) and Miss Cottle (547 Powell), but the former decided to rest on her laurels after her strenuous two days at Brooklands, though she thoroughly enjoyed watching the performances at Packington ford.

Neville Hall (292 c.c. O.K.), H. Greaves (349 c.c. Beardmore Precision), and H. S. Perrey (557 c.c. B.S.A.), passing through Packington Ford.

The Fun Begins.

Starting from Lordswood Road, Birmingham, the fun began within three miles, where a narrow, grassy lane terminated in a series of minor splashes, joined by a single rideable track, just submerged by an inch or two of running water. Next came Hagley Wood and Walton Hills, the latter observed but too easy for comment when the surface, as it was on Saturday, is dry.

A brake test took place on Sheepwash Hill, near Shut Mill, at which the following appeared to make outstanding performances: W. J. Knight (499 Triumph), W. J. Moxon (349 Monopole), J. L. Handley (398 A.B.C.), E. A. Montgomery (499 Sunbeam), F. Hallam (Brough Superior), and W. Goodall (976 Morgan), Romsley Hill—sometimes known as Shut Mill Hill—followed; though scored with deep ruts, it is easy when dry. Then came the Gulley and Beacon Hill.

A straightforward climb of Beacon presents no difficulties to a modern machine, but part way up the competitors were led round a grass triangle providing a hairpin of some severity.

At this point several riders "came unstuck." L. Cox (249 New Imperial) hit the bank and bent his crank. Miss Cottle, who was riding a Powell with a Jardine gear box, also hit the bank and fell, baulking Stretton Ward (499 Triumph), who, however, managed to pass very neatly. Goodall's Morgan also failed to get round clean. R. Cooper and L. Clulee (Allons), A. Cope (494 Douglas), E. Jacobs (349 Beardmore-Precision), J. Orford (349 Henley-Blackburne), W. Knight (499 Triumph), H. S. Perrey (557 B.S.A.), and B. L. Bird (770 B.S.A. sc.), all made good performances; but many others touched with their feet.

A mile and a half further on came the stop, start, and low gear test. Riders were expected to get away from rest within five seconds and cover a timed uphill section on low gear. The test was an easy one, but in spite of the most explicit instructions at least two riders changed up in the low gear section.

Miss M. Cottle (547 c.c. Powell) preferred the bridge to the watersplash.

Deceptive Appearance of Severity.

Gravel Pit and the Gaby Glide were the next obstacles, and then came Beoley ford, near Redditch. The number of failures at this spot can only be accounted for by its deceptive appearance of severity. The ford is fairly wide, but not deep enough to be really serious. Nevertheless, J. Bacon (490 Norton) stopped and fell; E. Jacobs (349 Beardmore-Precision), H. V. Collins (654 Brough Superior), Miss Cottle (547 Powell), J. Moxon (349 Monopole), and A. Sidley (348 Verus), failed, and at least nine others used their feet. L. Horton (249 New Imperial) probably made the neatest crossing.

There was a time check at the Bird-in-hand (Stratford Road); then came Windmill Lane hill with its attendant fords, and more fords at Barston, Grimshaw, and Pelham, each of which spoilt

Sporting Half-Day Trials.—

a few non-stops—a colonial section between Castle Bromwich and Coleshill, and finally Packington ford, quite the event of the day.

Many spectators had collected to watch the fun at the crossing, which is a matter of about thirty yards and nearly a foot deep for quite a considerable distance. Really clean crossings were few and far between, although the following were excellent: J. N. Roberts and L. Horton (New Imperials)—the former appeared to have clutch slip—W. Johnson (292 Allon), H. J. Stretton-Ward (499 Triumph), H. V. Collins (654 Brough Superior), B. L. Bird (770 B.S.A. sc.), T. Ward (349 Sirrah), H. Uzzell (964 New Imperial sc.), E. Arthur (Brongh Superior), E. Montgomery (499 Sunbeam), H. Walker (770 B.S.A. sc.), and H. Ward (557 B.S.A.).

There were fourteen absolute failures, but B. Green (348 Verus), R. Cooper and L. Clulee (Allons), S. Lewis (349 Beardmore-Precision), H. S. Perrey (557 B.S.A.), A. Sidley (348 Verus), and F. Hallam (Brough Superior), all made good crossings, apparently just using their feet to steady.

Five miles, mostly very rough going, brought the riders to the finish at Stonebridge Hotel, where thirty-five checked in by 7 o'clock.

Provisional results have been announced as follows:—

Best performance of the day: E. Clulee (292 Allon), winning the Avon Cup and a gold medal.

GOLD MEDALS: S. W. Lewis (598 Beardmore-Precision), H. J. Stretton-Ward (499 Triumph), H. Uzzell (976 New Imperial sc.), and E. Arthur (Brough Superior).

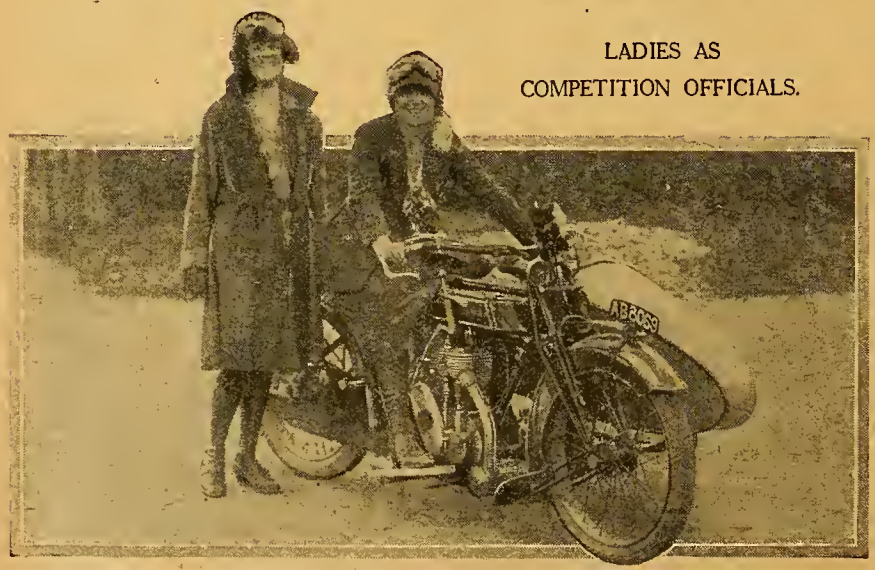
S. W. Lewis (598 c.c. Beardmore Precision) in the water splash at Quinton.

SILVER MEDALS: J. W. Roberts (293 New Imperial), L. Horton (293 New Imperial), R. C. Cooper (292 Allon), W. Johnson (292 Allon), S. Green (349 Verus), A. C. Cope (348 Douglas), W. J. Knight (499 Trinmph), H. S. Perrey (557 B.S.A.), B. L. Bird (557 B.S.A. sc.), J. H. Walker (557 B.S.A. sc.), and F. Hallam (Brough Superior).

BRONZE MEDALS: T. H. Weaver (349 Sirrah), R. F. Turner (293 New Imperial), S. H. Greaves (350 Beardmore-Precision), Neville Hall (292 O.K. Junior), H. Ward (557 B.S.A.), H. V. Collins (Brough Superior), and W. Montgomery (499 Sunbeam).

The team prize was won by the B.S.A. team, comprising H. S. Perrey, B. L. Bird, and J. H. Walker.

48 competitors entered, of whom 44 started, and 34 finished.



LADIES AS COMPETITION OFFICIALS.

THE SOCIAL SIDE OF RELIABILITY TRIALS.

A pleasing feature of the recent one day reliability trial held by the Worcester and District M.C.C. and M.C. was the appointing of lady marshals. Mesdames Blickley and Gibbs and their Sunbeam outfit, on which they performed very useful work in the course of the event which covered two fifty mile circuits.

LUBRICATION TESTS.

SOME time ago the engine department of Bayliss, Thomas, and Co., manufacturers of the Excelsior motor cycle, King's Road, Tyseley, Birmingham, commenced a series of lubrication tests with various oils in a standard 650 c.c. Excelsior and sidecar which were productive of some interesting results.

Graphite mixed with a standard high grade oil caused carbonisation and pinking in 750 miles, which necessitated dismantling and thoroughly cleaning the engine. The same oil, used without graphite, gave satisfactory running for 1,600 miles before pinking occurred.

The engine was once more taken down, cleaned, re-assembled, and put on the road again to be tested with another brand of oil. After running successfully for some months the test was discontinued, the distance covered being 3,200 miles.

On dismantling a third time, the carbon deposit was found to be less than had accumulated in the previous test of 1,600 miles. But, even more remarkable feature was that during the whole of these trials the valves were not ground in. In fact, the whole of the engine remained untouched.

Club News

West Kent M.C.

A hill-climb will take place on August 27th at The Cut, near Maidstone, off the Maidstone-Ashford road, commencing at 1.30 p.m. All entries must be forwarded to Mr. A. G. Williams, 51, Beckenham Lane, Shortlands, Kent, before Friday, August 18th.

Lichfield and District M.C.C.

Twenty-four competitors took part in a reliability trial held at the beginning of the month as the first round for the Hoskison Cup. Results: FIRST-CLASS AWARDS.—F. H. Twyman (499 Sunbeam); A. Jones (292 Diamond-Jap).

SECOND-CLASS AWARDS.—A. S. Button (550 Triumph); J. J. Smith (490 Norton); H. Griffin (976 Royal Enfield sc.). The second round will be run off on August 27th.

Ilford M.C.C.

August 13th has been selected for the holding of a one day reliability trial for motor cycles, sidecars, and three-wheel cycle cars. Various cups will be awarded, in addition to gold, silver, and bronze medals. The run will start from the "Bell" Hôtel, Epping, at 9.30 a.m., and other particulars of the event are available from Mr. A. E. Sweetingham, 25, Christchurch Road, Ilford.

Eastbourne and District M.C.C.

Arrangements are now in hand for the holding of speed trials on the parade at Eastbourne between 2 p.m. and 6 p.m. on September 9th, when the following clubs have been invited to compete: The B.M.C.R.C., Woolwich, Plumstead and District, Brighton and Hove, and Surbiton M.C.C. A number of valuable cups are being offered, together with gold, silver, and bronze medals. Further particulars may be obtained from the club secretaries concerned, or from Mr. H. V. Warren, 73, Terminus Road, Eastbourne.

North London M.C.C.

About forty members turned out for the evening run held on Wednesday of last week. The riders started from their headquarters, "Ye Olde Gate House," Highgate, at 8 p.m., and returned at 12.45 a.m. after a very enjoyable run through Potters Bar, Hatfield, Welwyn, Knebsworth, and Harford, where supper was served, the return journey, starting at 11.45 p.m., being made *via* Hartingfordbury, Hatfield, and Barnet. It is hoped to repeat this success in the near future. Meanwhile, the next event is the Club Cup Trial on Saturday next.

Neath and District M.C.C.

Tuesday, August 8th—the day following the open speed trials on Peudine Sands—has been chosen for holding the "Welsh T.T." There will be run off a 100 miles race—twenty laps of five miles each—with classes for 500 c.c., 750 c.c., and unlimited c.c., and a 50 mile race (ten laps) for 250 c.c. and 350 c.c. machines. The event is open to all members of clubs in the South West Wales Centre A.C.U. In addition to other valuable prizes, the Capt. Watkins Challenge Silver Rose Bowl and the President's Challenge Trophy will be competed for.

South Midland Centre A.C.U.

Official results of the championship and team trial, a detailed report of which appeared in last week's issue of *The Motor Cycle*, are now to hand.

SPECIAL GOLD MEDAL: T. D. Chapman (993 Matchless sc.).

GOLD MEDAL: C. Broom-Smith (998 Indian Chief sc.).

SILVER MEDALS: T. S. Sharratt (349 A.J.S.), C. B. Smyth (499 Sunbeam) L. Welch (292 O.K.), E. O. Spence (989 Harley-Davidson sc.).

BRONZE MEDALS: C. C. Lahin (678 Martinsyde), L. P. Walter (550 Triumph), H. Reyre (498 Ariel), F. Roberts (596 Indian Scout), T. G. S. Babb (499 Sunbeam), Miss Bates (499 o.h.v. Triumph), L. V. Freeman (976 Sunbeam sc.), and C. Slade (490 Norton sc.).

Club cups were awarded to Luton and S. Beds. (E. O. Spence), Oxford M.C. (L. Welch), N.W. London (C. B. Smyth), and Mid. Bucks (T. S. Sharratt).

The Service Challenge Cup was won by Bucks. County M.C.

Eastbourne and District M.C.C.

Trying weather conditions attended the annual reliability trial on the 16th inst, when the Harold Day cup and the Kett cup were competed for (for solo and sidecar machines respectively). The winner of the first trophy was L. S. Mason (550 Blackburne), whilst H. V. Warren carried off the Kett cup with a 976 c.c. Royal Enfield and sidecar.

East South Wales Centre A.C.U.

A reliability trial will be held on Saturday, August 19th, starting at 2.30 p.m. from Cardiff, at which there will be several novel and interesting features, including speed judging and acceleration and braking tests. Voluntary marshals are needed, and help from motorists who live in the Cardiff and Newport district would be much appreciated; communications should be addressed to Mr. E. R. Mitchell, 29, Llanfair Rd., Cardiff.

Sarum and District M.C. and C.C.

S. E. Crisp (Ner-a-Car) won the reliability trial held on the 12th inst. for the July Challenge Cup (presented by Messrs. Hobden Bros.), a silver medal being awarded in addition. Second came H. A. Lord (James sc.), followed by H. G. Macklin (550 Triumph), both of whom gained silver medals. Twenty competitors entered, all successfully completing the course.

Woolwich, Plumstead and District M.C

Best performance in the club team trial held on Saturday, the 15th inst., was made by F. Murray (499 B.S.A. sc.). The team prize was won by the following team: H. A. Collier (Matchless), B. J. Sims (499 Triumph sc.), and F. J. Ellis (976 Matchless sc.).

Sunderland and District M.C.C.

The weather for the reliability trial held on the 16th inst. was very unfavourable, but in spite of this a fair number of competitors faced the starter. Boltby Bank and Arden Bank in Yorkshire, together with several watersplashes (swollen by the rain) were included in the course. H. L. Young (349 A.J.S.) was first, with a loss of only five marks, closely followed by S. Bell (490 Norton), with a loss of eight marks.

North Liverpool M.C.C.

All motor cyclists residing in the district are invited to become members of the new club which has recently been formed under this title. The club will be affiliated to the North Western Centre A.C.U. Those interested should attend a meeting which is being held to-night at 8 p.m. at Croylands Street Schools, Walton, Liverpool.

Worcester and District M.C.C.

In conjunction with Worcestershire M.C. the annual one day reliability trial was held on Saturday the 15th inst., when the president's cup, the Eric Williams cup, and the Badgery shield were competed for. The course was one of 51¼ miles completed in two circuits, making a total of 102½ miles, starting from the Fox Inn at Brandsford.

H. J. Stretton Ward (499 Triumph) and J. A. Newman (494 Douglas) tied for the Eric Williams cup; President's cup was won by W. A. Carr (8 Morgan).

The team prize was carried off by (1) J. A. Newman (494 Douglas), (2) H. J. Stretton-Ward (499 o.h.v. Triumph), and (3) W. R. Brown (499 Sunbeam sc.).

FIRST CLASS AWARDS SOLO: J. A. Newman (494 Douglas), H. J. Stretton-Ward (499 o.h.v. Triumph), W. J. Knight (499 o.h.v. Triumph), C. F. Townley (Norton), J. Bacon (Norton), S. W. Lewis (Beardmore), and E. Main (369 A.J.S.).

SIDECARS AND 3-WHEELERS: W. R. Brown (499 Sunbeam sc.), B. Bladder (976 New Imperial sc.), W. A. Carr (8 Morgan).

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday 4d.

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

C 17

LADY MAKES THE FIRST "DOUBLE-TWELVE" RECORD.

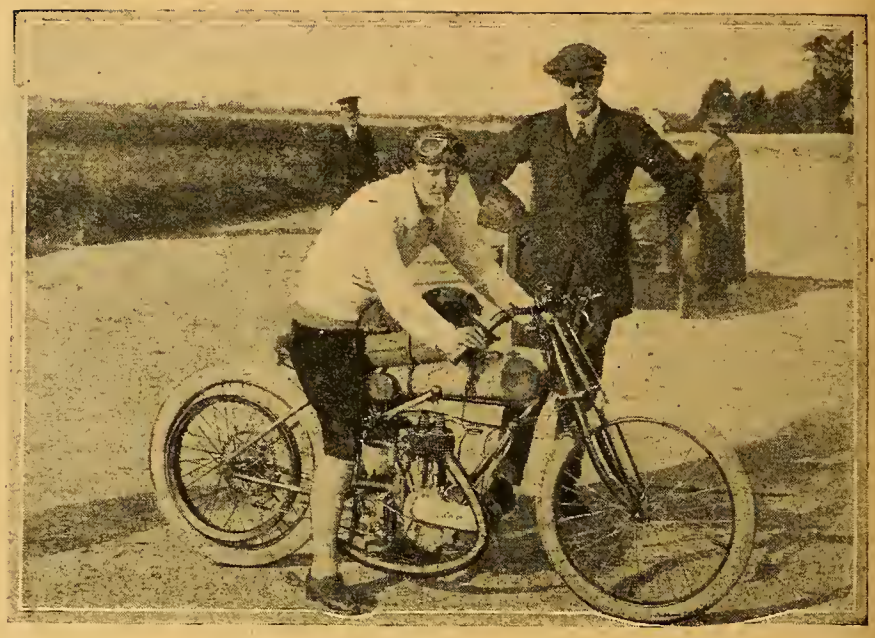
Mrs. Janson's 24 hour ride on a Trump-Jap.

ON Wednesday and Thursday of last week Mrs. G. M. Janson, riding a 249 c.c. Trump-Jap, gained the distinction of being the first rider to make a "double-twelve hour" record in this country.

The "double-twelve" method of covering a twenty-four hour ride permits the driver to rest for twelve hours between two twelve hour stretches on the track; the machine is locked up during the resting period.

Mrs. Janson covered 43 miles 677 yards in the first hour and thereafter lapped Brooklands at over 40 m.p.h.; the three best laps being done consecutively at 46.46 m.p.h. At the end of the first twelve hours 515 miles 1,123 yards had been covered at 42.97 m.p.h.

On the next day the hourly speed never fell below 44.12 m.p.h.; and two hours' riding were done at 46.37 m.p.h., and the grand total mileage was brought up to 1,071 miles 1,180 yards at a speed of 44.65 m.p.h., this constituting the first British "double-twelve" record.



Before commencing her successful attempt on the double-twelve hour record. Mrs. Janson and the 249 c.c. Trump-Jap on which she rode 1,071 miles, 1,180 yds. in 24 hours at an average speed of 44·65 m.p.h. Lt.-Col. R. N. Stewart is in the background.

In addition to the above record Mrs. Janson also made world's records in Class A (250 c.c.) as under:—

11 hours .. 506 miles 695 yards (46.03 m.p.h.).
12 hours .. 556 miles 57 yards (46.33 m.p.h.).

No trouble was experienced throughout the run except for oil on the magneto contact breaker. On the whole the weather was good, as there was sunshine without the temperature being too warm, and there was little wind. It was a remarkable performance, and Mrs. Janson showed wonderful pluck throughout. Her mount was equipped with an M.L. magneto, Hutchinson tyres, a Lodge plug, a Sturmey-Archer gear box, and Renold's chains. Castrol oil and Pratt's motor spirit were used.

KEEN RACING AT ESSEX BROOKLANDS MEET.

Good Handicapping provides some excellent finishes. Three Events for Motor Cycles.

AS there were but two events for motor cycles only in the programme of the Essex Motor Club's Brooklands meeting on Saturday, the chief interest centred on the cars. Nevertheless these two races were well worth watching, especially as the finishes were so close as to make it almost impossible to judge who had won until the numbers went up. Additionally there was a passenger machine race in which cars and sidecars competed together.

As seventeen machines started in the 500 c.c. handicap, the field soon spread out until it was almost impossible to distinguish either the individual riders or the leaders; and, right until the last lap, the track was covered with motor cycles in an almost continuous string. W. H. Sheraton (Norton) at first gained the lead, and, by the last lap, had an advantage of nearly half a mile. Behind him, however, R. E. Dicker (Rudge) and J. L. Emerson (Douglas) were coming up at a great pace, and for a while it seemed as though they must catch the Norton. Time, however, proved too short, and Sheraton had a handsome win, averaging 66.25 m.p.h. The riders of two competing machines which had fallen out caused consternation by wobbling along the straight as the leaders finished at speed.

	Handicap.
1. W. H. Sheraton (490 Norton)	1m. 27s.
2. R. E. Dicker (499 Rudge) ..	1m. 6s.
3. J. L. Emerson (499 Douglas)	scratch

From the spectators' point of view few races could be better handicapped than the 1,000 c.c. event, as some twelve riders entered the finishing straight at the same time, the ensuing *melée* being most exciting. It is true that the scratch man, C. F. Temple, failed to catch the leader, but his passage through most of the field when the Harley was really going alone provided very definite thrills.

Pullen Again.

As it was C. G. Pullin achieved victory with the Douglas at a speed of 86.5 m.p.h., just passing R. E. Dicker (Rudge) on the post. G. Mannd (A.B.C.) would probably have caught Dicker had the race run a little longer. Unfortunately C. Waterhouse had a spill just after the members' bridge, due to the exhaust pipe of his Sunbeam coming loose. For a moment he lay tangled up in his machine while a surprised photographer was apparently too scared to help him though within a few yards. Happily the incident closed with no more than a bad shock and some grazes.

Though the latest Brooklands ukase states severely that motor cycles are too noisy and promises dire things if silencers are not fitted, one would never have imagined that anything had been said when the field for the passenger handicap went to the post. Some, at all events, had a bark like a machine-gun.

It was almost impossible to follow the race accurately from the stands owing to the fact that some eighteen machines on an 8½ mile course spread out a long way when the scratch man departs 3m. 36s. after the limit man.

The cars—a Temperino, Eric Longden, Salmson, and Mathis—were completely outclassed, only one of them, the tiny Temperino, making any showing at all. Right at the end F. W. Dixon shot to the front on a Harley-Davidson, travelling well, O de Lissa (Motosacoche) following, with a crowd of machines behind, from which R. Charlesworth (Zenith-Jap) just managed to gain third place.

	Handicap.
1. F. W. Dixon (989 Harley-Davidson sc.)	18s.
2. O. de Lissa (994 Motosacoche sc.)	33s.
3. R. Charlesworth (987 Zenith-Jap sc.)	1m. 21s.

Insurance Problems.

A Special Feature in which Motor Cycle Insurance Questions are Answered and Discussed.

After Twelve Months' Wear.

Mr. E. W. Larby, South Norwood, writes: "With reference to the inquiry of Mr. C. Canthall, of Croydon, in your issue of the 29th June, wherein he asks what amount an insurance company would pay on a machine stolen twelve months after taking out the policy.

"I do not agree entirely with your remarks *re* the amount stated in proposal form. What it amounts to is this: The insured states what he considers the value of the machine, and also what he paid for same, say £100. The company says: 'All right, we shall charge you so much.' After a time the insured is unlucky enough to have his machine stolen or burnt, and has to get a new machine. Does the company fulfil the contract that has been paid for? Oh, dear no! Being very generous (?) it will perhaps merely pay £65.

"In view of this, one is inclined to ask, why pay a premium on an amount that the company has no intention of paying?

"I had a policy with a company for three years and paid a premium on an amount of £110. One day I was looking at my policy and realised what I had let myself in for. I wrote to the company and asked them what they would pay if my machine was lost, but could not get any satisfaction—they would not, in fact, promise to pay even twenty shillings!

"I may say I cancelled this policy and now have one which is worded as follows:

> "In the event of the motor cycle insured being totally lost or destroyed by fire, accident, or theft, the *insured value* will be paid."

"This policy actually cost me less than the other."

The principle involved in this particular instance is one which is not novel to insurance, but is one of the fundamental principles on which insurance has been based from its inception.

A policy of insurance is never intended to be a means of profit. At the time of insuring, a value is stated for purposes largely of convenience to both parties to the contract, and does not necessarily mean that the value as stated in the proposal is the actual value of the machine proposed to be insured.

It will be clearer, perhaps, if it were put this way: A machine is purchased, say, to-day at a cost of £150, and is proposed for insurance at that amount, and at the end of, say, six months, is totally destroyed or otherwise lost, and a claim is then made by the policy holder against the company with whom he insures. The machine at the time of insurance is worth £150. Between the time of insurance and time of loss, six months' usage has taken place, so that consequently it must be obvious that the value after six months' usage cannot be the value at the time of insurance, a certain depreciation having certainly taken place in the meantime.

Several other readers raise this same point in one form or another, and instance in almost every case that the company with whom they insure "accepts the value they stated at the time of proposal." This is not the actual case, and there can be no verification of value unless an inspection of the machine takes place by the company proposing to insure it. It is impossible for such an inspection to take place without considerable increased charge being made for the insurance, so that the assumption from the outset on the part of the insurance company is that the proposer is acting honourably, and stating what is the actual value at the time of proposal, and that in so stating the proposer implies that in the event of a total loss arising at any time during the currency of the policy, that this total loss cannot exceed the value stated by him.

However, a loss arising, say, in the sixth or subsequent months' currency of the policy must mean that the value is less than at the time of proposal. The prevailing practice amongst established offices is not to issue an agreed value policy, and one of the reasons against their so doing is that it is contrary to all the principles of equity, unless the agreed value is such at the outset of the insurance as shall be less than the actual value is likely to be at any time during the currency of the policy.

On the 364th day of a policy's currency, a loss may arise in connection with a machine insured at a certain value twelve months prior to that date. If an agreed value is to be the basis of the insurance, it will be seen that such agreed value must be an amount which, from the insurance company's standpoint, provides for every contingency likely to arise during the course of the full twelve months while the policy is in operation.

A policy of insurance is a policy of indemnity, not of profit, and if both parties approach the contract bearing this essential principle in mind, no difficulty at all need arise. A total loss is dealt with on the basis of fair market value at the time of the loss. This basis, it will be seen, provides for a payment which shall at any rate equal the cost of a similar machine in every respect being replaceable by the insured out of the money paid by the insurance company.

* * * *

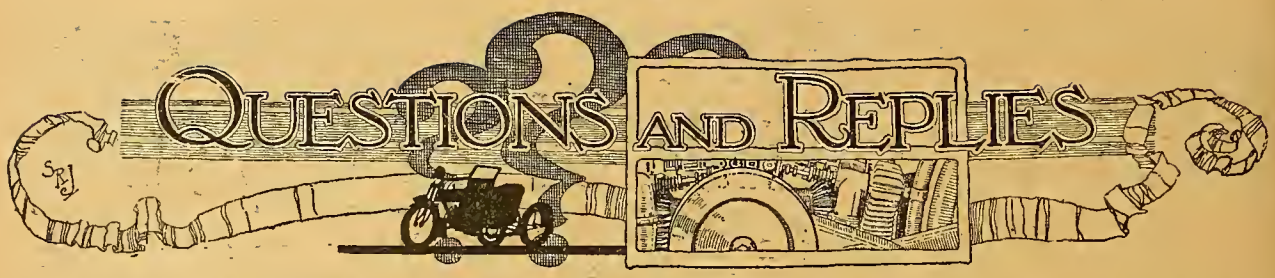
Loss of a Coat.

Mr. L. C. Studeley, writing from Peterborough, says: "My machine, which is fully insured, catches fire, and in a successful endeavour to put out the flames, I irretrievably ruin a £6 waterproof coat. Will a reputable insurance company pay for a new coat? Or should I have let the machine burn out and draw my cheque for £120 from the insurance people.

It would certainly appear to be a hardship were an insurance company to refuse to pay for a waterproof coat in circumstances such as are set out in this enquiry, and we are quite sure, on the circumstances being proved, that most companies would treat a claim of this nature very sympathetically indeed.

On the other hand, however, we would point out that there is no implied or expressed indemnity of this nature under a motor cycle insurance policy, and obviously there cannot be any such indemnity as a matter of right, because it would be extending the limits of a policy to an extent to which motor cycle insurance, as such, should not go.

The last sentence in this enquiry calls for a little comment, perhaps, and that is that an insured is supposed to exercise reasonable care and precaution, and we take it that common honesty would impel a motor cyclist placed in such circumstances to do all he possibly could to minimise any possible loss.



A selection of questioos of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisatioo. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

GEAR SLIGHTLY TOO HIGH.

My 557 c.c. 1917 chain driven B.S.A. and sidecar goes splendidly on the level but picks up very badly on slight gradients. In fact, I have to change down on to second gear on hills that smaller machines can roar up. I am inclined to think that it is geared too high. The sprockets are thus: Engine sprocket, 16 teeth; gear box, 35 teeth and 16 teeth; back wheel sprocket, 35 teeth (26in. back wheel). Do you think this is too high for touring purposes? If so, give me your suggestion as to what alteration to make. Will you let me know my present gear ratio, as I make it about 4⅜ to 1?—H. P.

Your present gear ratio is approximately 4⅜ to 1, which should be about correct for light sidecar work. If you carry very heavy loads you might try an engine sprocket with one tooth less, which you could obtain from the manufacturers. To calculate the gear ratios, multiply together the numbers of teeth on the driving sprockets, and also multiply together the numbers of teeth on the driven sprockets. Then divide the latter product by the former. If you wish to measure by a simple method, put a chalk mark on the engine sprocket to correspond with a similar mark on the crankcase, engage top gear, mark the wheel rim and chain stay, raise the exhaust lifter and turn the rear wheel one complete revolution, counting meanwhile the revolutions of the engine.

HEAVY FUEL CONSUMPTION.

Petrol consumption on my 348 c.c. Douglas averages 42 m.p.g. with a Binks carburetter (jets 000, 2, and 5). The engine has been recently overhauled and new valves, guides, and pistons fitted. Would lagging the induction pipe improve matters, as this is always very cold? I would be grateful for advice with a view to improvement.—G. B.

The consumption you mention is obviously unduly high, although the jets would seem to be about correct. You should get at least 100 m.p.g. Try fitting a hot air intake to the carburetter and lagging the pipe near the cylinder connections. This will serve the double purpose of preventing air leakage and aiding the conduction of heat from the cylinder to the pipe. Make sure, of course, that the jets are in their correct holes, that the leather damping pads in the throttle are functioning correctly, that the jets are screwed firmly into their seatings, that the petrol level is correct, and that all joints in the petrol supply system are free from leaks.

Important Dates.

Sat., July 29th, North-Western Centre A.C.U. Open Hill Climb.
Sat., July 29th — Scottish Speed Championships.
Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.
Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.
Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.
Sat., Aug. 12th—B.M.C.R.C. Members' Meeting at Brooklands.
Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.
Sat., Aug. 12th—Motor Cycle Races in Phœnix Park, Dublin.
Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.
Sat., Sept. 16th—The Scott Trial.
Sat., Sept. 23rd—500 Mile Race at Brooklands.
Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.
Sat. Nov. 25th, to Dec. 2nd.—Olympia Motor Cycle Show.

WORK FOR A SKILLED MECHANIC.

Since decarbonising my New Hudson two-stroke it has lost a great deal of power. I have given the cylinder joint extra care. I then decided to fit new piston rings, which when fitted caused an uncanny rattle inside which I attributed to the big-end being worn; I therefore replaced the old rings. When the cylinder is off I can rock the connecting rod backward and forward a quarter of an inch each way. (1) Should this be so? The slackness of the big-end is easily felt by up-and-down motion. (2) Do you think that this loss of power is caused by the worn rings, and if I took up the big-end would it stop the rattle when the new rings were fitted? (3) Do you think this job could be managed by me, as I have never taken a two-stroke engine down, but I have seen car engines overhauled, and understand the use of engineers' tools? (4) What are the parts of the crankcase assembly which need special care in assembling to prevent air leaks? I may state that before decarbonising the machine ran well, and I have not touched the timing. (5) How is the big-end taken up, and do the rings need any special fitting?—C. H.

In a short paragraph it is impossible to describe the whole of the processes connected with the taking up of the big-end and the fitting of new piston rings. Apparently in your engine the trouble is caused by excessive play in the big-end bearings; the rings also may be badly worn, and if so they would account for a certain amount of noise when the engine is running. Both the replacement of rings in a worn cylinder and (especially) the taking up of bearings is a highly skilled fitter's job. When reassembling the crankcase the joint between the two halves of the case must be very carefully made and the crankcase bolts evenly tightened, each bolt being screwed up a little at a time to ensure an absence of air leaks between the faces of the two portions. Seccotine is a good jointing material, and so also is Metalastene. Great care must also be taken that the joints between the cylinder base and the top of the crankcase are clean; a brown paper washer coated on both sides with Seccotine is advisable. As your engine appears to be generally out of order, we would recommend that you obtain a copy of "Two-stroke Motor Cycles."

RELATING TO THE FOUR-VALVE TRIUMPH.

(1) Is the cylinder head of the o.h.v. Triumph removable for valve grinding, or are the valve seatings removable? (2) If not, it will be necessary to remove the entire cylinder. Is there sufficient room to do this without taking the engine out of the frame? (3) Is the possibility of compression leakage due to four valves a serious objection in a machine intended for touring, and not for racing.—A. R. P.

(1) The cylinder head is removable and may be detached for valve grinding and decarbonisation. (2) It is not necessary to remove the entire cylinder. (3) The possibility of compression leakage at the valves may be ignored, and it is no more likely to be objectionable than it is in the case of a two-valve engine.

MEANING OF W.D.

What is meant by the abbreviation W.D. so often seen in connection with advertisements of motor cycles, spare parts, and accessories?—M.C.

The abbreviation you mention stands for War Department, and is applied to goods made for the War Office and which are now sold to the public as "surplus stores."

POTENTIAL SPEED OF OLD SINGLE.

What is the bore, stroke, and cubic capacity of the 1914 3½ h.p. 3-speed (hub) Premier? Also, about what speed should I obtain with this machine, solo. At present I am unable to exceed 28-30 m.p.h., although everything seems in order (top gear 5 to 1).—R. C. S.

The machine had an 85 × 88 (499 c.c.) engine, which should be able to accomplish a speed of at least 40 to 45 m.p.h. if everything is in order. Without a personal examination it is difficult to give you any guide to the trouble.

MECHANICAL PUMP ON A B.S.A.

When the eccentric of the Best oil pump which I fitted to my 557 c.c. B.S.A. is set at just over half throw, the oil overflows into chain case, but the sparking plug keeps quite clean and I cannot make the engine smoke. Can you tell me if I can adjust the oil level in the crank case at all? I do not know if I am giving too much or whether the oil level in the engine is too low.—T. H.

If your piston rings are in good condition it is quite likely that your engine will not smoke, even if you are supplying more oil than is necessary. You do not state if the engine smoked previously to fitting the Best mechanical pump. If the oil is overflowing into the chain case you are obviously getting a steady flow. The half-way setting of the pump regulator should be about correct.

A NOVICE AT 59.

(1) Do you think that I am too old to ride a motor cycle? I am 59 years of age, and for the last 30 years have ridden a push cycle to and from business in London all the year round, but am beginning to find it rather tiring. (2) Should you not think that I am too old what type of mount would be the most suitable for the above purpose, and for little week-end outings? I do not fancy any motor attachment.—N. C.

Certainly you are not too old to ride a motor cycle; there are many enthusiastic riders who are older than yourself. Almost any of the lightweight machines on the market would be suitable for your purposes; you should choose a two-speed model, with clutch and kick-starter. For obvious reasons we are unable to recommend any one particular make of machine, but if after careful thought you care to submit your final choice to us, we shall be glad to tell you if it is suitable for your needs.

MOTOR CYCLE POLICE. To facilitate their work in the outlying districts of Calcutta, the police authorities have formed a motor cycle squad. The British trade should note that American machines were selected.

TUNING AND A PERSISTENT KNOCK.

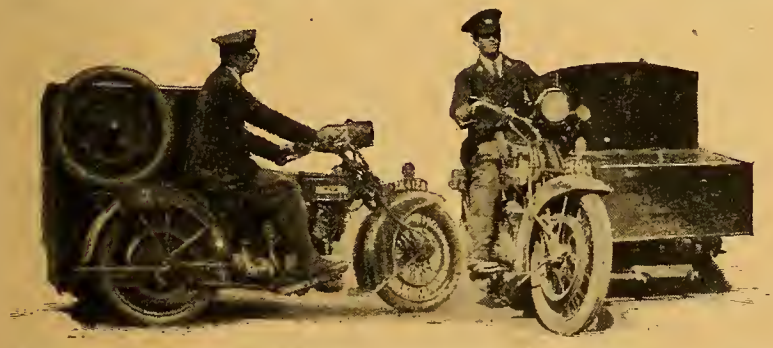
(1) What is the correct valve timing for a 1913 hub-geared Triumph? (2) The correct ignition timing? (3) What makes my engine knock? It has been rebushed and new big-end and small-end fitted, but it knocks when accelerated.—J. McL.

(1) and (2) Time the exhaust valve to close as the piston reaches t.d.c. and the inlet valve to open immediately afterwards. Set the spark control at two-thirds retard, the piston on top dead centre, and couple up the magneto with the points just separating. (3) Possibly your engine requires decarbonising. Provided there is no perceptible play in the bearings, the trouble is due either to carbon deposit, worn piston, or ignition too far advanced.

A TWO-STROKE RATTLE.

Peculiar rattle becomes apparent after running my two-stroke for a considerable time or on ascending a slight incline (this latter will bring it on a few minutes after the engine has started from cold). This is a rattle as distinct from a knock caused by ignition or faulty bearings, and will continue for some time after the throttle is closed and the engine turning over without firing. It also seems to me to occur on each stroke of the piston, and not merely every revolution of the engine, and sounds as if the gudgeon pin had come loose and was catching in the inlet port each stroke. The engine, however, appears to be in perfect order, and the rattle does not appear to affect the power at all, although it gradually becomes louder and louder until almost like a hammer. What would happen if it was allowed to continue *ad lib.* I do not know, but it gradually disappears if the engine is allowed to continue very gently. Speed seems to have no particular influence on its appearance or disappearance. Can you suggest a remedy? Sparking plug in use is a special two-stroke model.—H.K.S.

The rattle you mention is peculiar, for although there is a form of rattle common to some two-stroke engines, it is usually affected by speed to a very great degree; moreover, it does not wear off with further running. On the whole we should be inclined to think that the piston is too slack a fit in the cylinder, causing a definite slap until the engine warms up, when the increased temperature takes up the piston clearance to some degree. We should advise you to return the cylinder to the manufacturers, so that they may check the clearances and see if the dimensions of your piston are as standard.



HITCHIN POSTAL AUTHORITIES INNOVATION. A B.S.A. side carrier of ample capacity used for parcel delivery. The experiment has proved a success, saving both time and labour.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"H. N." (Croydon).—Volex dry batteries for solo lighting; W.S.R. variable jet on A.M.A.C. carburetter.

"C. S. B." (Reading).—W.S.R. jet on B. and B. carburetter (fitted with pilot jet) on a 490 c.c. Norton.

"J. S. B." (Walsall).—398 c.c. A.B.C.; 481 c.c. Scott Squirrel: speed, m.p.g., hill-climbing capability. A.B.C. spring frame.

"C. D." (Repton). 492 c.c. Sunbeam "sports" model; speed, m.p.g.

"C.F.A." (Edgbaston). — 490 c.c. Norton (16H); 349 c.c. A.J.S. "Sports."

"A.S" (Whitwell).—499 c.c. Sunbeam solo and with sidecar: m.p.g.; touring speed.

G. G. (Stourbridge). — Self-sealing tubes: durability and efficiency.

J. B. P. (Sway).—500 c.c. or 678 c.c. N.U.T. solo: comfort, speed, m.p.g., etc.

A. C. G. (Hammersmith).—225 c.c. Royal Enfield, K/G model: petrol consumption, efficiency.

"F.R." (Huddersfield). — Carden 2-seater.

SPARKLETS.

Oil-Cooled Engines.

As oil-cooled engines are being discussed to a considerable extent at the present time attention is drawn to the fact that the Bradshaw types of oil-cooled engine are protected by British patent, and also by patents and pending patents abroad. It is stated that the American patent issued on June 27th last contains remarkably broad claims.

Assistance for Tourists.

Motor cyclists in the Peak district will be glad to learn that Mr. E. F. Hurt, proprietor of the Darley Bridge garage, stocks spares for most of the leading makes of motor cycles. In addition to this, and on account of the difficulties sometimes experienced in this district when a breakdown occurs, arrangements can be made for assistance to be sent at the charge of 1½d. per mile, or in case where breakdown necessitates the machine being taken to the garage a fee of 2d. per mile will be charged.

Removing Tar.

Autoglass is the name adopted for a new preparation which not only removes tar, but produces a mirror-like surface on frames of motor cycles; it also rejuvenated a dulled coach-built sidecar. We received a sample of this preparation, which is cream-like in its substance, from the Midland Pharmacal Co., Market Street, Coventry. It is put up in handy tins in three sizes, 2s. 6d., 4s. 6d., and 8s. 6d. Apart from the uses of Autoglass already mentioned above, it is claimed to renovate and preserve leather.

Magneto Successes.

The Sunbeam ridden by A. Bennett in the 500 c.c. class of the recent French Grand Prix was fitted with an M-L magneto, adding a further success to the already large list credited to this make of ignition apparatus.

Found on the Road.

A motor cycle silencer outside the High Barnet Engineering Works, 45, High Street, Barnet, on the 16th inst., by Mr. A. J. Drake, of this address. The silencer will be returned on application to him.

A Miniature Automatic Pulley.

For the very smallest of fixed gear belt-driven machines of the motor-assisted bicycle type a miniature edition of the Philipson automatic governor pulley has been evolved by Philipson & Co., Ltd., Astley Bridge, Bolton.

Distribution in Northern Counties.

Mr. S. W. Phillpott, of 1, Oakdale Road, Mossley Hill, Liverpool, has undertaken the distribution of Excelsior motor cycles and Bayliss-Thomas light cars for the counties of Cumberland, Westmorland, Lancashire, Staffordshire, Cheshire, Derbyshire, Nottinghamshire, and the Isle of Man.

Price Reductions.

The following reductions in the prices of Sheffield Henderson motor cycles, manufactured by Henderson Motors, Ltd., 73, Fitzwilliam Street, Sheffield, are announced:—349 c.c. standard touring model, £80; 349 c.c. "sports," £80; 349 c.c. o.h.v. type, £105; 550 c.c. touring model, £105; 349 c.c. standard touring sidecar machine, £97 10s. These prices took effect as from July 17th, 1922.

Plugs on the Grand Prix.

Both the winner and the second man in the Grand Prix motor cycle race used K.L.G. plugs.

Tyres in the French Grand Prix.

Machines gaining chief places (1st and 2nd in the 500 c.c. class, and 1st, 2nd and 3rd in the 250 c.c. class) were all fitted with Dunlop tyres. The fastest lap was put up on a Norton machine similarly equipped.

Business to Continue.

The representatives of the late Mr. P. J. Evans, who was unfortunately killed in an aeroplane accident on the 16th inst., state that the motor cycle agency business will be carried on as usual at 81/91, John Bright Street, Birmingham.

Catalogues Received.

J. Barbour and Sons, Ltd., South Shields: A catalogue of various articles of clothing, including the Beacon oil-skin suit for motor cyclists.

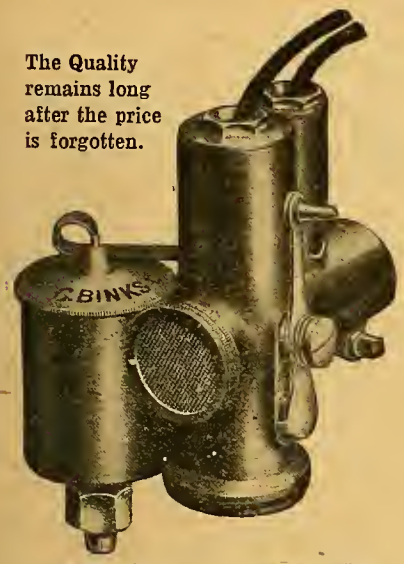
Reginald Samson, Ladywood Road, Birmingham: Catalogue of various motor cycle accessories, dealing with an excellent spare tube carrier, a repair outfit in a leather pouch, and numerous other accessories.

New Imperial Cycles, Ltd., Princip Street, Birmingham: A useful illustrated list of spare parts, in which all items are numbered and priced.

Jackson's Impervo, Ltd., 48, Dover Street, W.1: An illustrated booklet and guide describing the results obtained by treating tyres with the "Impervo" preparation.

After the Grand Prix at Strasbourg. Some well-known motor cyclists responding to "The Motor Cycle" photographer's "smile please." Left to right—T. Clibbery, the Amac representative; T. C. de la Hay, a Sunbeam T.T. winner; and A. Bennett, whose win on a Sunbeam completed his hat trick in big events. F. Buckley, of Dunlop tyres; H. Hassall, the Norton rider, who established a record for the Strasbourg course and beat it. Mrs. Hassall, J. W. Shaw and G. W. Walker, two other Norton riders of note, and the well-known Mr. J. L. Norton, with one of his assistants.

The Quality remains long after the price is forgotten.



The Patent 3-jet damping arrangement allows the carburettor to be controlled by a single lever. Yet an air valve is fitted for coasting down hill.

BINKS' CARBURETTORS

ARE A SOUND INVESTMENT.

REVISED PRICES:

FAMOUS TOURING MODEL - £4

New Model for light-weight two-strokes, without air valve - £3

Plus 2/- packing and postage.

IMMEDIATE DELIVERY.

Each instrument is sold on approval under a guarantee that has stood for 12 years, viz:—

To Give PERFECT AUTOMATIC FLEXIBILITY.
MARVELLOUS SLOW RUNNING IN TRAFFIC.
CERTAIN AND POWERFUL ACCELERATION.
GREATER SPEED.

IT IS THE MOST ECONOMICAL CARBURETTOR MADE

AND CANNOT FAIL TO INCREASE YOUR MILEAGE PER GALLON BY ANYTHING FROM 10 TO 50 PER CENT. (SOMETIMES MORE).

BEFORE TAKING YOUR HOLIDAYS, FIT A BINKS'

Mr. C. L. BINKS.

to your machine. It is easily done by yourself or your Agent in an hour.

Experience and Prove its Merits

whilst on tour, knowing that if you are not completely satisfied you may return the carburettor to us and we will undertake to return your purchase money, less 7/6.

IT WILL PAY YOU TO DO SO, BECAUSE you will spend less on petrol and add to the pleasure of driving.

Mr. H. BINKS.

IMMEDIATE ATTENTION IS GIVEN TO ORDERS.

Please send for descriptive catalogue—prices and book on carburation free.
Carburettors to suit all machines. Carburettors fitted at our works.

Here is a selection amongst numerous testimonials:—

TRIUMPH. 27/4/22.

Gentlemen,

I have great pleasure in giving you my experience with the "Binks" carburettor. This is the third instrument of your make I have purchased. For easy starting, good petrol consumption and all round reliability, it cannot be beaten.

Funny thing, but a friend of mine who uses a well-known 4 h.p. countershaft machine cannot pass me on mine, although they are identical machines. The "Binks" carburettor gives that little extra burst of speed when occasion demands.

W. G.

MORGAN. 1/5/22.

Sirs,

I have no hesitation in stating that your promises are entirely justified in all particulars, as to easy starting, running and economy in petrol consumption. I can now make my Morgan do as I like; hitherto she seemed to do as she chose.

I venture to prophecy continued success for the "Binks" carburettor. F. L.

DOUGLAS.

Sturminster Newton.

Gentlemen,

Now with regard to the carburettor which I recently purchased from you, let me say that I am perfectly satisfied with it.

When I had it fitted to my 4 h.p. Douglas, I was at first certainly sceptical, and somewhat suspicious of it fulfilling what your firm claimed for it to be capable of doing.

However, I persevered, and am now, as I have already stated, perfectly satisfied with what it has done. I have nearly doubled my m.p.g. from 35 to 65, which is not at all bad, and there is no doubt that the acceleration is great. I am very glad I bought it. W. W.

RUDGE. 28/6/22.

Dear Sirs,

The carburettor you sent me for my 3½ h.p. Rudge-Multi has proved a great success, and runs like a Twin. Starting is easy, and the engine takes hills on top gear now which it absolutely refused to do before. A Rudge-Multi fitted with a "Binks" carburettor is indeed a joy to ride and drive. F. B. L.

2¾ h.p. A.J.S. 15/6/22.

Dear Sirs,

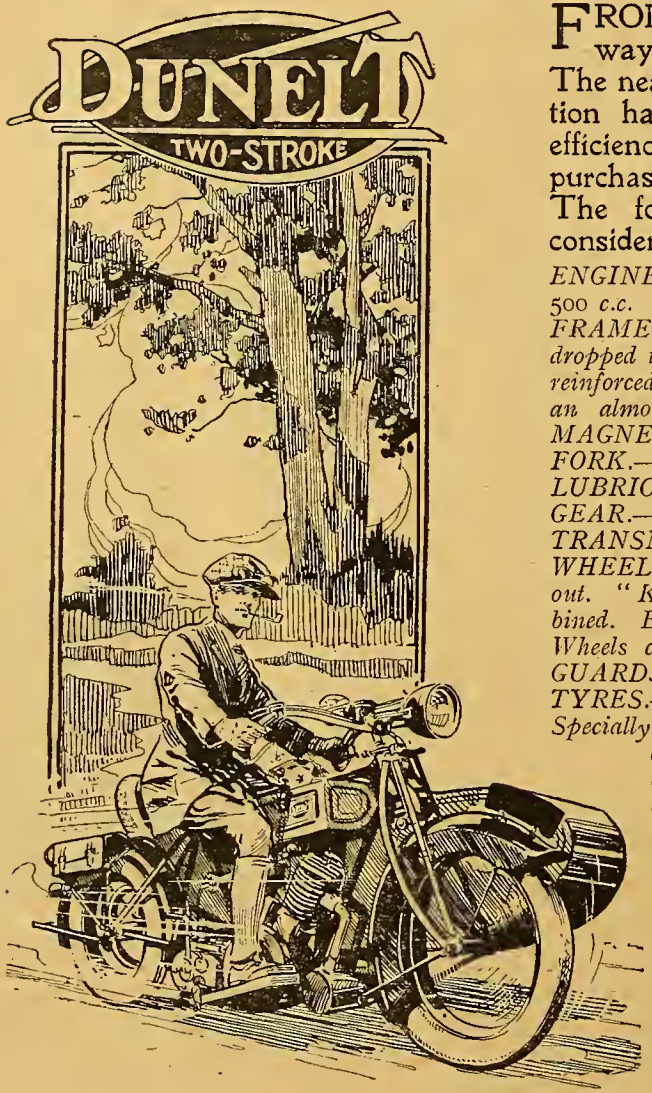
Please forward a set of your printed matter relating to Motor Cycle Carburettors. I want them for a friend owning a Scott combination. The carburettor that you fitted to my solo mount 2¾ h.p. A.J.S. at your works a few weeks ago is giving every satisfaction. The machine is now a pleasure to drive. The control levers also are a decent size, and work very sweetly.

J. B. C.

Use Binks' Sparking Plugs 3/6 each in tin box; they are reliable.

C. BINKS (1920) LTD., Phœnix Works, Eccles, MANCHESTER.

BANK ON A



FROM its inception the Dunelt has quickly forced its way into the forefront of public esteem.

The neat design, excellent comfort and sound construction have appealed strongly to those who require efficiency and economical running coupled with low purchase price.

The following points are worthy of your closest consideration:

ENGINE.—Patent 4 h.p. single-cylinder two-stroke, air-cooled 500 c.c.
FRAME.—Specially designed strong section loop frame, with straight dropped top tube, giving low saddle position. The lugs are heavily reinforced throughout where the maximum strain occurs, thus ensuring an almost unbreakable frame. Front and back stands fitted.
MAGNETO.—M.L. CARBURETTER.—A.M.A.C. SPRING FORK.—Laminated spring, specially designed.
LUBRICATION.—Slight drip feed to cylinder walls.
GEAR.—Sturmey-Archer three-speed and clutch.
TRANSMISSION.—$\frac{5}{8}$" roller chain to gear and 1" belt to back wheel.
WHEELS.—26"×2$\frac{1}{4}$", easily detachable and interchangeable throughout. "Knockout" spindles. Improved footboards and rest combined. BRAKES.—Front and rear brakes, operating on belt rims. Wheels can be removed without interfering with brakes. MUDGUARDS.—6" wide, giving protection in all weathers. D Section TYRES.—Hutchinson Heavy, 26"×2$\frac{1}{2}$". COMBINATION.—Specially designed Sidecar, allowing interchangeability of wheels complete with apron and spare wheel. FINISH.—All black and heavily enamelled: nuts, bolts and small fitting being treated with an Anti-Rust process.

Finally, on price the DUNELT scores above all others—it costs 108 GUINEAS, which makes it unquestionably the greatest value and QUALITY combination on the market. Why not come and examine these machines for yourself? Get the best at Allen-Bennett's and reap the benefit of "Real Service after Sales."
All models in stock of the "Matchless" and "Dunelt."

The

SCOTT SOCIABLE *for* SPEED & SAFETY.

Mr. H. Mortimer Batten, writing in "The Motor Cycle" of June 22nd (page 832), *says* :—

"As regards maximum speed, the machine will accelerate to over 40 m.p.h. on any good high road. The efficiency for the engine size is marvellous, for it must be borne in mind that the capacity is approximately the same as that of the ordinary 4 h.p. single."

BRIEF SPECIFICATION:

ENGINE: 5-6 h.p. Scott Two-stroke, two cylinder, water-cooled, roller bearings.
GEAR: 3-speed, constant mesh, ball-bearing.
CLUTCH: Metal frictional contact, combined cone and expanding ring.
CARBURETTER: Zenith.
TRANSMISSION: Propeller shaft and spiral bevel.
WHEELS: Disc, detachable, all interchangeable.
BODY: Two-seater with dickey.
LIGHTING: Dynamo.
TAX £4. **FUEL:** 70 m.p.g.

SPEEDON MOTOR OILS

HIGH GRADE AND UNEXCELLED FOR CYCLES.

John S. Morris & Son (Oils), Ltd., Cross Lane Oil Works, Manchester

Cuts down Petrol costs 25%

Fam=O is a wonderful invention which is going to be of great service to the whole motoring community. Its use saves at least 25% of the cost of Petrol, and already there are well authenticated cases investigated by us, where a fuel economy of 50% has resulted. The first 8=oz. can of Fam=O clears the engine of all carbon deposit, and the regular use of Fam=O, in the proportion of 1=oz. to every 5 gallons, prevents further carbonisation and improves the flexibility and general running of the car.

OUR GUARANTEED OFFER

Use just one can of Fam-O, and if it does not give you 25% more mileage and clean your Petrol system and Engine we will refund your money. After the first can, you use 1-oz. Fam-O to every five gallons of Petrol, or 1 can to every 40 gallons.

Fam-O is sold by garages at the following prices :—For Motor Cars, 6/6 per 8-oz. can; Light Cars and Motor Cycles, 1/- per 1-oz. bottle.

Sent Post Free anywhere by the Proprietors if you cannot obtain locally.

AGENTS WANTED EVERYWHERE.

In Busy and Populous South Wales

The South Wales Branch

of

The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED,

Head Office: 77, CHEAPSIDE, LONDON, E.C.2

is situated at

15, High Street, CARDIFF

Telephone: CARDIFF 4156.

—a convenient centre for the whole District.

Applications for "The Motor Cycle" and "The Autocar" policies are invited from South Wales Agents.

These should be addressed to the Cardiff Branch, the Manager of which will be pleased to give any information that may be desired.

Every assistance is rendered to agents in securing business, and the specialised organisation of the Company is placed at their disposal for the settlement of claims or difficulties.

N.B.—"The Motor Cycle" policy is authorised and approved by "The Motor Cycle," with which The Autocar Fire & Accident Insurance Company is closely associated. The conditions of the policy are complete and comprehensive, and the issuing Company enjoys a high reputation for generous and prompt settlement of claims, and for efficient service to policy-holders at all times.

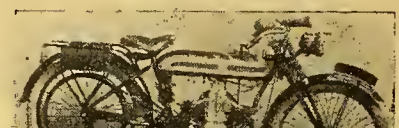
55 M.P.H. GUARANTEED
2¾ H.P. DOUGLAS



1922 Special Models with light twin ring pistons, specially finished cylinders, alloy valve caps. Zoom! Zoom!! exhaust, barrel valve springs, Tony combined aluminium footboards and footrests, low riding position, lamps and horn, special Amac. Delivery anywhere and only obtainable from me. Cash or easy payments. The finest, cheapest and best little 'bus built. Price **£69 10s.** Standard Model, **£68.**

A NEW TWIN RING PISTON.

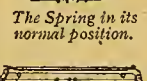
Scientifically designed to prevent distortion. Four strengthening webbs and radiating fins, gudgeon pins supported correctly. Much lighter than standard pistons, yet double the strength. Piston with rings and gudgeon pin, **14/6.** J. S. writes: "I fitted the new pistons, and was astonished at the speed and power increase."

ZOOM! ZOOM!!

Are you Zooming it? This lovely exhaust pipe gives a lovely Zoom note and provides an expansion chamber many times the cylinder capacity; it silences without back pressure. The most efficient system yet devised; over 2,000 sets already fitted. Beautifully finished in polished copper plate, **30/-.** Nickel plated, **33/6.**

The Spring in its normal position.

The Spring heavily loaded. Movement 4 inches.



Showing how the top leaves absorb both shocks and rebound.

UNBREAKABLE SIDECAR SPRING. GUARANTEED FOR 12 MONTHS.

Double the comfort. Actual photographs reproduced showing the wonderful 4in. movement of the spring. You can practically turn this spring inside out, and it will return to its normal setting without fracture. Its secret is in its self-shock-absorbing qualities, and it works both ways, thus taking the rebound, which is also absorbed by friction. Have one fitted to your chassis, and you'll be surprised at the added comfort. Price **17/6.**

The Featherweight Motor Cycle.

IT is not always particularly easy for the motor cyclist of to-day to appreciate the advantages of the ultra-light type of mechanically propelled cycle. The rider of a sporting mount is apt to look with scorn and derision on anything smaller than 250 c.c., yet the real miniatures are increasing in number, and there is a very definite reason for their increasing popularity.

Firstly, it must be remembered that the popularity of the motor cycle has not yet approached its zenith, and that by far the largest number of prospective motor cyclists will be drawn, not from the class of young rider with sporting proclivities, but from the business men who require a very moderately priced two-wheeler principally to take them to and from their daily work. Again, there are thousands of cyclists whose increasing years compel them to consider some form of mechanical aid on their pleasure trips into the country or on their journeys to or from the golf course. Such as these do not need fast or heavy machines, but rather the lightest and simplest possible type of mount. The motor assisted pedal-cycle, if properly devised, exercises a strong appeal to the habitual cyclist. For one thing he is able to retain his accustomed riding position and enjoys, rather than otherwise, the occasional light pedal assistance which may be necessary on the more severe gradients. Without doubt the motor assisted cycle is doing, and will continue to do, good propaganda work, and though we consider that the greatest future lies before the miniature motor cycle fitted, probably, with a tiny two-stroke engine and two-speed gear, yet both types are to be encouraged. Three points are of vital importance whichever type is to be considered, viz., price, weight, and mudguarding. The first item must be kept as near as possible to that of a high-class pedal cycle, weight should not exceed 80lb. to 85lb., and mudguarding should be sufficient to permit a business man to arrive at his office in a reasonable state of cleanliness, not a very difficult proposition when it is recalled that a speed of 20 miles an hour is the maximum desired.

Inexpensive Touring.

SOME people hold the belief that motor cycle touring is an expensive pastime. It is not. At the same time it may easily be made expensive, and it must be confessed that most of us live, as it were, on a higher scale during our holidays than we do during the remaining forty-eight or fifty weeks of the year. But it is not fair to blame the motor cycle for this increased expenditure.

There is really no reason why a tour should make a bigger hole in one's purse than a more prosaic fortnight by the sea. In fact, the reverse should be the case.

Perchance, however, the grumblers are content with a more or less modest boarding house when they spend a vacation *sans* motor, but, setting off awheel, their ideas of comfort alter, and nothing satisfies but a really elaborate hotel.

Sometimes, indeed fairly often, the big hotel provides the better value for money, but as a general rule the motor cyclist tourist should be content with the less imposing establishment. Even then his expenses will not be greater than with the seaside boarding house, and certainly infinitely less than in the big seaside hotel.

It is nevertheless very true that one cannot judge the relative value of an hotel until one is in possession of the bill next morning.

· An index to the advertisements in this issue will be found on the page facing the back cover.

The Camping Season.

A LOT of motor cyclists will be camping out during the next few weeks. I have no desire to hurt anybody's feelings, but every camper knows that when permission to use an old camping site is refused, the cause is almost always that "dirty campers" have been there in the interim. No landowner or land tenant cares to see one of his choicest plots defiled by a litter of paper, foul tins, grease, bacon rind, egg shells, and the like. It is not enough to chuck such rubbish somewhere out of sight. There may be a convenient ditch or patch of fern handy to cover up filth, but filth attracts vermin, and wasps, flies, and earwigs are the portion of the next camper to use that site. The decent camper always burns everything which is burnable before he strikes camp. He makes a point of burning out tins to remove grease, scraps of meat, fish, milk, etc., therefrom. What cannot be burnt he buries. Even his greasy washing-up water is strained into a shallow pit through a sieve of leaves and twigs. The Boy Scouts have very stringent rules on this subject. Let us motor cyclists see that we are at least as tidy and sanitary as small urchins can be. Some of my favourite sites are now closed to all campers, and others are so polluted that no decent man would use them.

Two Tent Tips.

THE camping motor cyclist may be interested in two small tips making for comfort and efficiency during an open-air holiday. Has your cottage tent a vertical pole at each end? If so, scrap it and substitute at each end two shear leg poles, lashed together at their upper ends. The first merit is that the doorway is no longer obstructed; even more precious is the fact that when a heavy shower begins at 2 a.m., instead of staggering out barefoot into the wet, cold night to slacken the taut guys, you just reach out a sleepy paw and alter the angle enclosed by the shear legs. A second tip of less value is based on the fact that a push is often as effective as a pull. The four main guys of the ordinary ridge-poled tent are generally extended far out from the tent at about 45 degrees, where their sturdy pegs have a nasty habit of stubbing one's bare toes, and causing one to rev. freely upwards from a datum line commencing with a handy but naughty little "d." These protruding obstructions may be eliminated by stretching the fore guys backwards and the rear guys forwards in X formation on either side of the tent; it stands just as firm, and the fairway at each end is cleared.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

Knee Grip on Lady's Machines.

I DON'T know whether our fair riders grip the tank with their knees. In ancient days, when the paladin disguised himself as a woman to spy out the enemy's fortress, they used to detect him by tossing over a few links of gold chain, and watching whether he opened or shut his knees to catch it. Perhaps the same applies to motorcycling. But I have just been sampling a famous ladies' model, and I noticed that the colossal knob of the gearlever came just where the tenderest part of my thigh was. It didn't feel right, but perhaps petticoats make a difference. I believe that the design of ladies' machines still requires a great deal of attention to detail.

More Strange Trouble.

READERS may remember my carefully laid plans for a no-trouble season. Also how the demon of mischief who occasionally interferes in human affairs proved one too many for me. He's been at it again. What was it this time? Certainly. A high-velocity golf ball, smitten by one of those willowy knickerbockered blokes with universal joints at every hinge of his anatomy, encountered my tank at speed some thirty yards after quitting the club face. Result, new tank. I must study the literature of demonology, and learn what sacrifice will propitiate the powers of darkness. The culprit was merely demonstrating a perfect swing, and didn't mean to hit the ball at all.

A Home Truth.

ACCORDING to the A.C.U. the public are clamouring for more silent motor cycles. It may be so. Our village postmistress is not. I reproduce the conversation verbatim:—

V.P.M.: "So you've got a new motor cycle, Mr. Ixion?"

Self: "Yes, Mrs. Jones. Do you like it?"

V.P.M.: "To be sure I do, sir!"

Self (incautiously): "Now I wonder what's taken your fancy about it; I didn't know you were interested in machinery."

V.P.M. (without malice): "No more I be, sir. But it makes that much noise I have time to get the children in afore you comes past."

(Ixion kickstarts vigorously.)

Occasional Comments.—

Anywhere a Pony Can Go.

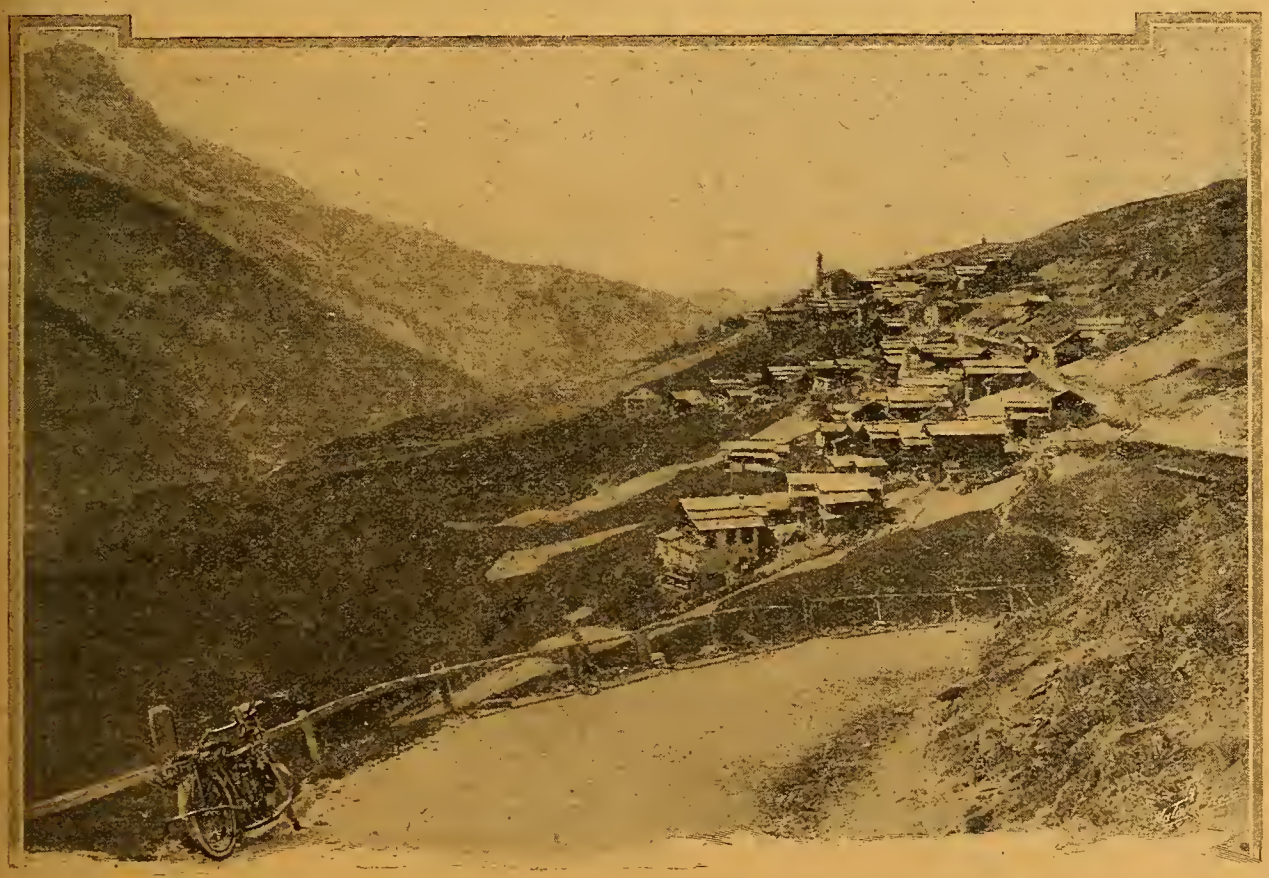
I THINK so highly of the motor cycle that I use mine in the country exactly as one would use a horse. I make it do everything except jump, especially in dry weather. With a low bottom gear and a handlebar clutch I caracole gaily over commons, through woods, across fields, and through fords. There are just two snags in this sort of riding, provided the surface is dry. Snag No. 1 is the familiar difficulty of opening a gate whilst supporting a machine which scales over 2½ cwt. Snag No. 2 is obviated by a prop stand with a disced spike at its business end—viz., the problem of propping up a machine on a soft flat surface.

An Impromptu Gymkhana.

WE have all heard of the gentleman who rode a motor bicycle backwards from somewhere to somewhere—I believe the feat was actually accomplished in Yorkshire just before the war, and I only pray that no topers of the night before were stricken with lunacy by the weird spectacle. But I have recently experienced an even more harrowing sensation. Some few motor cyclists were larking about on a deserted cricket field, when Jones bet Robinson that he couldn't ride his machine blindfold. Robinson was duly blinkered by tying a thick bag over his head, and off he went. He simply couldn't balance and fell off with agonised shrieks. Then we all tried Two or three experienced considerable difficulty in keeping upright; but one or two members of the party could not only ride with ease, but managed to take their machines decently near a mark sighted just before they were blindfolded. Try it, and test your sense of balance. Mine is only so-so with no horizon to act as a datum line.

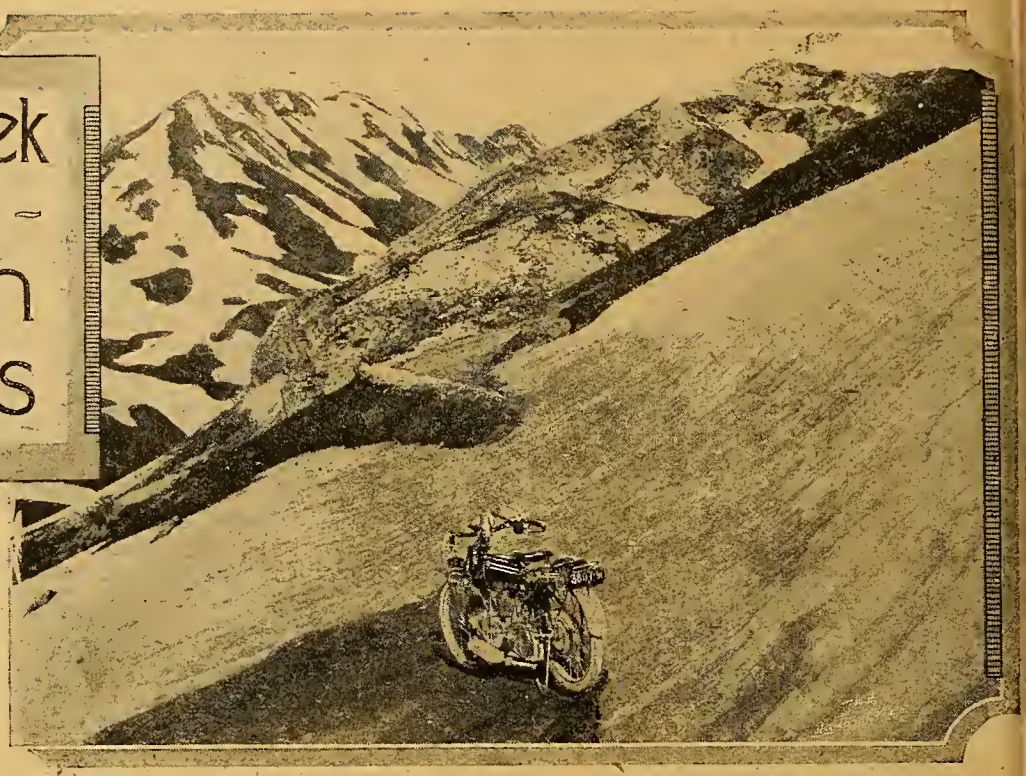
True Pathos.

THERE are plenty of pathetic individuals wandering about the planet—the gourmand whose purse only permits of feeding in teashops; the rosarian I once met, who earned his bread in the whaling industry; and many others. But for sheer tragedy commend me to the marine engineer whose hobby is motor cycling, and who spends about one month per annum ashore, for which a cruel and brutal Government compels him to pay a full quarter's tax, or may be two quarters if the month falls awkwardly. I have just had a letter from one such, who implores the trade to remember that seven riders out of ten are staid fellows, and prefer the "sit up and beg" riding position to T.T. attitudes. He has fitted a .02in. nipple and needle valve to the left transfer port cover of his Scott, and connected it up to a branch petrol line. He finds the engine will now start at the second kick from cold in any weather.



TOURING IN THE FRENCH ALPS. The quaint village of St. Veran, 6,690 feet above sea level and the highest commune in France. See article "A Week in the High Alps" (page 154).

A Week in the High Alps



One of Europe's Most Wonderful Touring Grounds. Amidst the French Alpine Passes with a Solo Lightweight.

By C. B. WATERLOW.

The limit of practicable road on the Galibier. A huge bank of snow confronted the traveller as late as June.

THERE is one respect in which a solo motor bicycle scores over all other self-propelled vehicles, and that is its ability to be turned round easily in awkward places. Many of the mountain tracks and snowy passes up which I penetrated early in June one would not have dared to attempt in a car, for fear of coming up against a bank of snow or an avalanche across the road with a precipice to one side and a cliff on the other, and being forced to proceed most perilously in reverse down perhaps five miles of narrow, steep and winding mountain track.

A motor bicycle on the Riviera is one thing, and in the high Alps in springtime it is quite another. On the azure southern shores of France it is apt to seem rather small, especially in the height of the season when Rolls-Royces and the like swarm everywhere; but once in the mountains, providing that it is sound and has a good three-speed gear, it comes into its own. Its rider has the freedom of the heights, and can lord it over all the cars that pass, or try to pass the highest *cols*, for they often get into difficulties before the roads are fully cleared for their summer traffic.

The Writer's Task.

To attempt to describe the high French Alps, with their wonderful roads in all the glory of fine June weather, is a heavy responsibility for the conscientious soul of one who, having travelled much, firmly believes this part of the world to be the most beautiful on earth and unsurpassed as a touring ground. If these notes induce but a few to follow in the writer's wheel tracks and to learn to know and appreciate the country and the people of the French Alps, they will, in his opinion, have served their purpose.

My little A.J.S. never feels the heat; but I did not allow it to mistake the magnificent coast road from Cannes to Nice for the T.T. course. The shimmering, bituminous surface seemed to exude heat like a casting fresh from the mould, and the sun beat down with merciless intensity as I left Cannes on the afternoon of June 1st. Turning to the left up the valley of the Var without entering Nice, the road, still broad and straight as an arrow, was in much better condition this year than formerly. It carries a very heavy industrial traffic for the first part of the way, and it was good to find that repairs had at last caught up with deterioration.

Surprising Contrast.

The change from a broad valley baking in the southern sun to a wonderful narrow mountain gorge comes with surprising suddenness when one is making good speed, and then, passing through numerous short tunnels, the convolutions of the road beside a great torrent in full spate makes one feel that one is on the real *Route des Alpes* at last. For years I have longed to explore this route, the course planned by the branch of government known as *Ponts et Chaussées* in conjunction with the Touring Club de France that leads the astonished traveller over all the highest passes from south to north, skirting along the Franco-Italian frontier. Now at last the dream has come true, and my one desire left in that direction is to go again.

A glance at the map would appear to indicate that the distance from Nice to Entrevaux in the Var valley

A Week in the High Alps.—

is about equal to that from the latter place on to Barcelonnette, whereas actually the latter stage is much longer owing to the fact that no map can show all the innumerable bends in the road.

It is a different world into which one emerges after passing the first barrier of the Alpes Maritimes through the Gorges du Var, a fresher air, a softer light and, in June, a land that is full of the scent of flowers and new-mown hay. The road rises steadily through Puget Théniers and Entrevaux, which is the most charming old town with an ancient castle perched apparently quite inaccessibly on a pinnacle hundreds of feet above the broadened river.

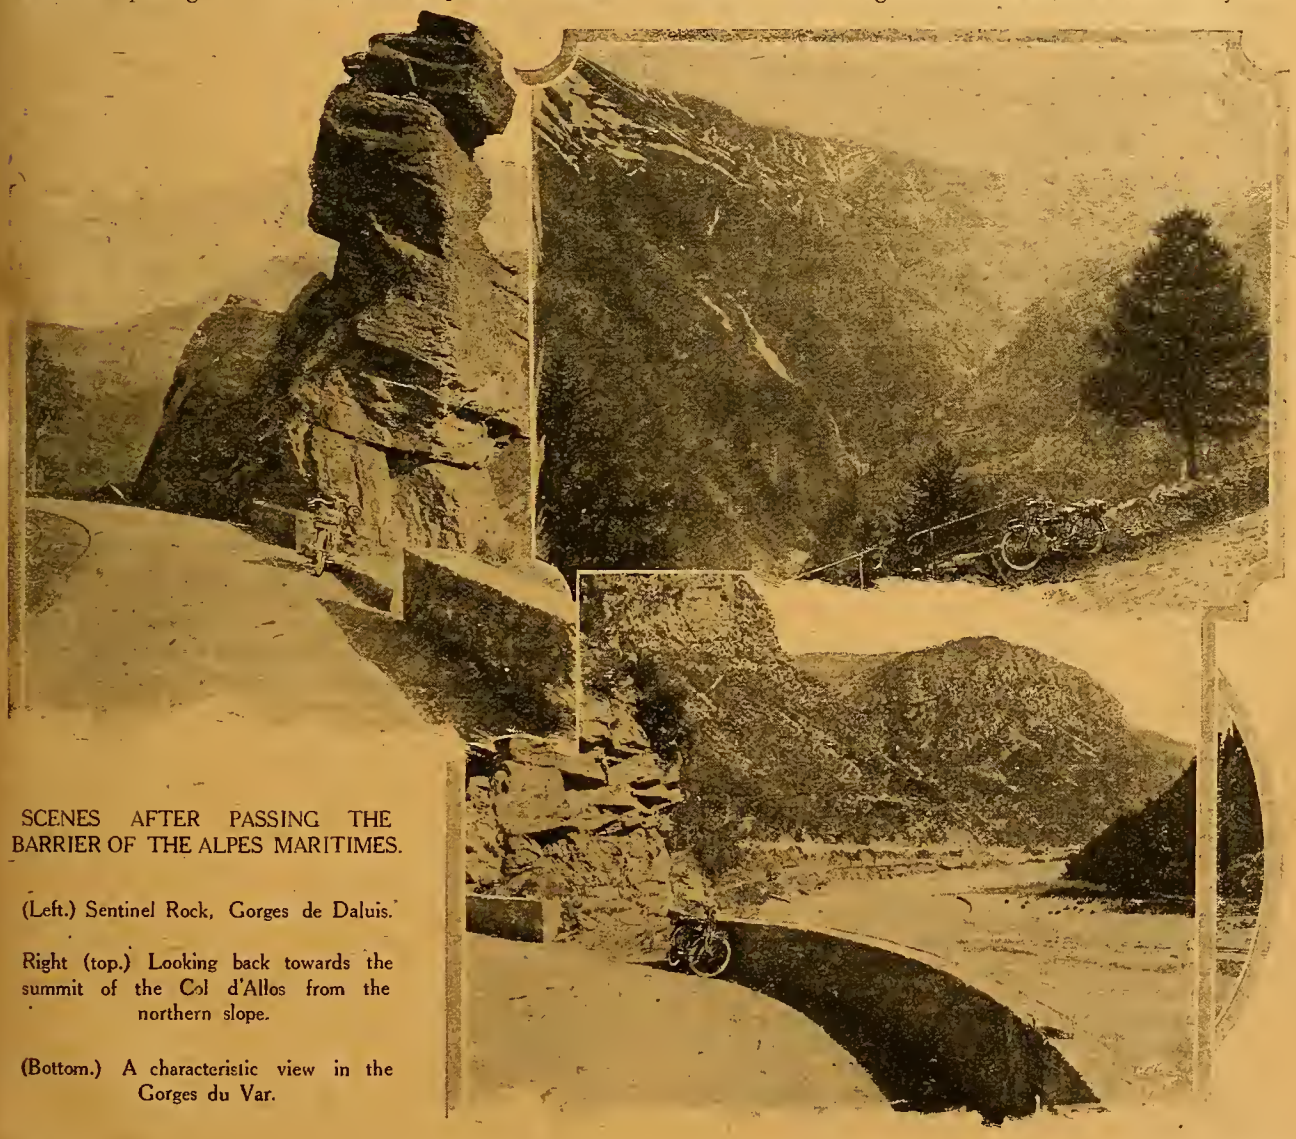
A Rocky Sentinel.

A little higher up, the route bends to the right, and then climbs, with a gradient that is for the first time noticeable, to the entrance of the Gorges de Daluis, a favourite excursion from Nice and a most wonderful mountain passage. A fantastic rock pinnacle stands sentinel at the southern end, and the road passes, by many bends and several tunnels, through a chaos of red cliffs and clefts whilst the torrent of the Var roars at an abysmal depth below one on the right.

What's in a Name?

Again the valley opens out as we descend to the level of the stream once more and arrive at a peaceful little town called Guillaumes, a name that French people now consider to be regrettable. Here there is a comfortable country hotel, and much to be seen of interest in the surroundings. It is the first stopping-place for motor coaches on the *Route des Alpes* in high summertime. I stopped for the night, my distance from Cannes now being 121 kilometres; the Col de la Cayolle, with its formidable elevation of 7,630 ft., was now before me.

The road leading up from Guillaumes to this *col* passes at first through a deliciously pastoral valley set off by rugged mountains closing the horizon to the north. The village of Entraunes, the last of any size



SCENES AFTER PASSING THE BARRIER OF THE ALPES MARITIMES.

Right (top.) Looking back towards the summit of the Col d'Allos from the northern slope.

(Bottom.) A characteristic view in the Gorges du Var.

A Week in the High Alps.—

in this valley, is very picturesque and contains in the middle of its narrow street one of the most fearsome hairpin bends to be met with anywhere.

Above the last group of wooden chalets the climb begins in earnest with a gradient of about 1 in 10, stiffening sometimes to 1 in 8. The last trees are left behind, and vegetation, save for scraggy grass and rock plants, disappears from the scene, which becomes grim and forbidding and very grand. Clouds were gathering over the summits, and there was none of the brilliance of some of the passes, equally lofty, further to the north. The road surface was quite good, only a little stony in places, and I rose steadily towards the clouds at 15 m.p.h. on second until, when the top seemed quite near, there came an unpleasant surprise, a mass of boulders across the road, and workmen who told me that there were quantities of snow and avalanches higher up, and that the pass would not be practicable before the end of the month. It was most disappointing. The only thing to be done was to drop right down again through Guillaumes, thread the Gorges de Daluis once more, and, by a circuitous route via Annot, la Colle St. Michelle and Colmars, attempt the Col d'Allos (7,312 ft.), which might also be in the same state, though I had passed it in a car nearly a month earlier last year.

Snow Compels Detour.

This enforced change of route was not altogether to be regretted, for it gave me one more mountain pass, the passage of la Colle St. Michelle, a matter of barely 5,000ft., not to be compared with those on the real *Route des Alpes*, but presenting a view of indescribable beauty over the deep wooded valley of the river Verdon in which lie the villages of Colmars and Allos.

It began to drizzle, my back tyre was suffering from a persistently leaky valve, and my petrol was running low, so that I was never so glad of the night's repose as when I arrived at the little Hotel de France in picturesque Colmars, where a welcome was certain, as this is the third year in succession that I have stopped there in passing over the Alps.

Scoring over a Car.

A party in a new and racy Nazzaro car also put up at this hotel for the night, and we fell into conversation, as one does so easily in French hotels. Their engine gave 80 horse-power and untold speeds on the road. They talked gaily of reaching the Col du Lauteret, about a hundred miles further on, for lunch the next day, starting only at 9 a.m. However, they did not know the road, and were certain to be disillusioned. Actually I left at 8.30 a.m., whilst they were making their preparations, and I never saw them again.

The morning was wet, and it looked as though the experience was coming of endeavouring to cross a 7,000ft. pass in really bad weather; but the clouds dispersed as I rose steadily through Allos and up on to the heights where the surrounding snows became blindingly bright. The road on the southern side is narrow and stony, but not really difficult, first speed being required only for a few soft patches. There were flowers on the heights and the track was clear of snow on both sides of the summit. Stopping by the refuge house at the top, a wayfarer informed me that much work had been done this year in clearing the pass, and that it had cost 7,000 francs. Certainly the descent on the northern side was in much better condition than last year.

I found that it had taken just under an hour to reach the summit, 25 kilometres (14½ miles) from Colmars, and I had risen 3,330ft. without stopping, overheating or worrying in any way, the elevation of Colmars being 4,050ft. and that of the top of the *col* 7,380ft.

The upper air makes one feel alive on a different plane of existence from the normal. Gazing down from the top of the Col d'Allos over a vast tumble of peaks, rocky and snowy and clothed at their bases with dark pine forests, the perspective in which the earth and life in general appear is all changed. Then indeed one feels equal to fulfilling Kipling's somewhat difficult injunction :—

> "—— meet with triumph or disaster,
> and treat these two impostors just the same."

But what a marvellous land this is! How small Ben Nevis would look from these heights, and what a pimple Snowdon would be!

I descended very slowly to Barcelonnette, so as not to arrive too early for lunch there, which, from past experience, I knew would be good. It is a little town tucked away in the heart of the mountains, but with an entourage of trim, well-built villas the presence and origin of which is curious. Some few decades back much of the enterprising youth of the place emigrated to south and central America, and some returned having made fortunes which they expended in building really comfortable homes in their birthplace. These houses are known as the Mexican villas.

Local Road Warnings.

They told me that the Col du Vars the next barrier to be crossed over the range called the Chaine de Parpaillon, was "*peu praticable*," a phrase scarcely strong enough to deter an enterprising motor cyclist. I was able to fill up here with the exact quantity of petrol and oil required and also to buy more photographic films, of which I had already expended a surprising number.

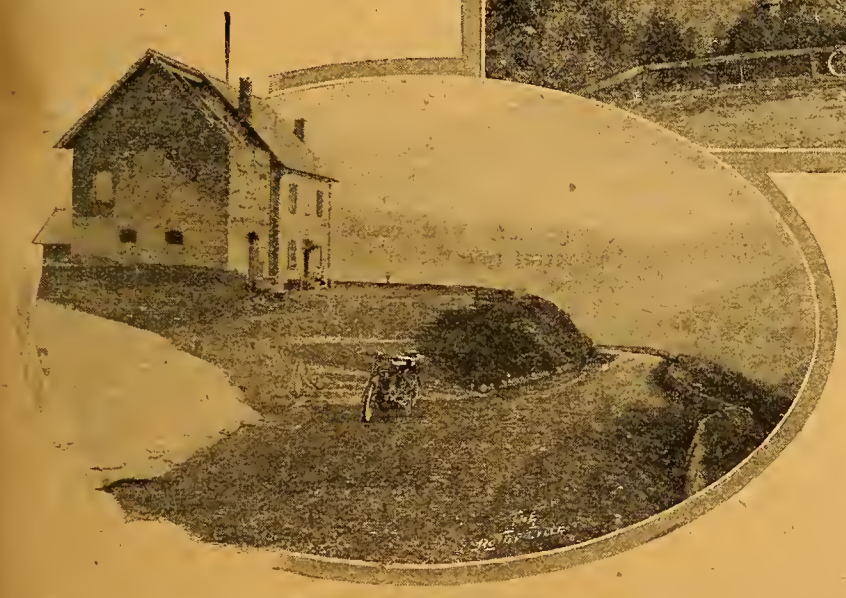
My only touring trouble, apart from tyres, was due to the smallness of the machine's petrol and oil capacity and to the fact that one can seldom induce dealers in country places to sell less than 5 litres (just over a gallon) of the former and two litres of the latter, which quantities my tank will only take when quite empty. It is obvious that this presents a serious difficulty when one is not radiating from a centre. Some form of auxiliary tank is really essential for long-distance touring in remote regions.

The afternoon was very hot, and as I breasted the steep southern ascent of the Col du Vars it seemed to get hotter instead of cooler as the height increased. Thunder clouds hung about the summits and flowers decorated the grassy slopes in a profusion that is marvellous to northern eyes. The road is bad, narrow, steep and very rough with vertical edges in several places. This pass, the top of which is 6,960ft., was constructed in 1891 by the 5th regiment of Chasseurs Alpins, and they probably began on the northern slope,

A Week in the High Alps.—

which is well engineered, and got rather tired of the job towards the end. It is considered to be one of the most difficult in the Alps from a motoring point of view. My only pauses on the ascent were of a photographic nature. It is a pity that the camera cannot render those dazzling little blue gentians that star the ground up there amidst rocks and stones and patches of melting snow.

The southern slope is very beautiful, with all the usual Alpine features of rich, flowery fields nestling at preposterous angles against dark forest-clad mountains, and with the lateral valley of the upper Ubaye leading straight to the Italian frontier past the delightful village of St. Paul. I once spent a night at the little inn there, where they have not even got electric light yet. One opens the front door and chickens run out of the parlour, and one catches a glimpse and a whiff of cattle reposing just beyond a second door, but upstairs it was clean, and I was given a meal that no ordinary human being could consume in its entirety. Owing to the proximity of the Italian frontier a passport is advisable.



The refuge house at the top of the Col d'Allos.

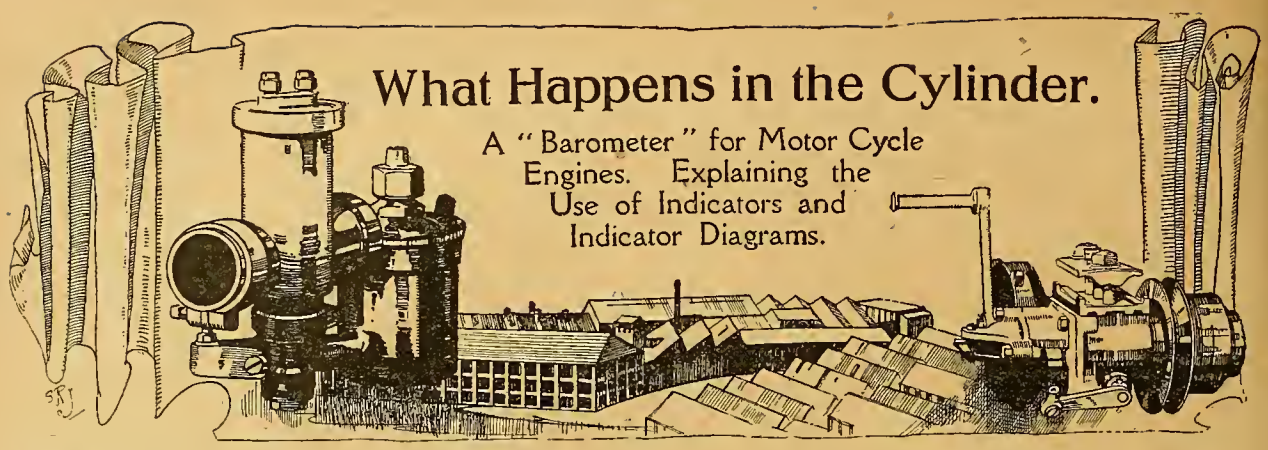
But the northern descent is glorious beyond all powers of description. At first the road winds downwards through a pine forest, the mossy turf of which in June is carpeted with flowers. Then the valley opens out to a spacious scene that is unique in the Alps. The broad valley of the Durance spreads itself far below, and, piling up on plane after plane of distance and elevation, the great snow mountains of Dauphiny rise into the skies, sometimes floating like ethereal islands above the earth and the clouds, sometimes losing themselves in unfathomable atmospheric depths. One is compelled to stop and gaze upon this vast magnificence. I wonder, if one built a house up there, whether it would be easy to live with that view every day, or whether one would be made to feel so minute as to render comfortable existence almost impossible.

By many convolutions the road descends upon Guillestre, another characteristic, peaceful old French country town with an ancient church and a passable hotel, and here we turn to the right to explore the Val Queyras down which flows the torrent of the Guil

View near the top of the road leading up to the Sommet Bucher.

from its source on Mont Viso and the Italian frontier. This is a detour that very few British tourists have as yet been accustomed to take; but they do not know what they miss. About 20 miles of excellent *route nationale* leads up the Val Queyras, and, in spite of all that has gone before, it is a revelation. It passes first of all through a gorge the vertical rock sides of which are fully a thousand feet high, and then emerges, as so often happens in these regions, into a broad and pastoral upper valley the flanking mountains of which are clothed entirely with forests of larch trees. The first place of interest, in the gorge itself, is *la Maison du Roi*, at which are to be seen souvenirs of Louis XIII., who passed that way on a journey to Italy. A little higher up a fine mediæval fortress, Château Queyras, stands across the valley and barred the way in ancient times. Then, passing Ville-Vieille at the confluence of the Guil with another mountain torrent, we come to Aiguilles, principal village of the *val*.

(*To be concluded.*)



What Happens in the Cylinder.

A "Barometer" for Motor Cycle Engines. Explaining the Use of Indicators and Indicator Diagrams.

MOST motor cyclists are acquainted with the self-recording barometer in which the fluctuations of the atmospheric pressure are indicated by an oscillating pen on a chart encircling a slowly rotating drum.

If instead of indicating the pressure of the atmosphere we have a moving pencil which records the ever-changing pressures in the working space of a motor cycle cylinder, and if the uniformly rotating drum is replaced by a flat plate which moves to and fro in such a way that it exactly reproduces the movement of the engine piston, the diagram drawn out will be known to the engineer as an "indicator diagram," and will prove of the greatest use in determining the efficiency of an engine under varying conditions of valve and ignition timing and with various settings of the carburetter controls or in comparing the results given by various designs of engine details or by various grades of fuel.

Resolving Cylinder Pressures Diagrammatically.

In order to realise fully the nature of an indicator diagram let us first imagine the stroke of the piston to be represented to a definite scale by a horizontal straight line, such as A H in fig. 1.

We may think of the point A as the "top dead-centre" and the point H as the "bottom dead-centre," and we may further imagine the stroke to be divided into a large number of parts at the points B, C D, E, and so on.

Now just as an ordinary thermometer records temperatures by the measurement of the column of liquid against a scale, let us imagine that it were possible to insert a pressure gauge into the cylinder of our engine which would read off, in exactly the same way, the pressure in the working-space for each of the piston positions corresponding to the points A, B, C, etc., throughout one complete cycle of the engine.

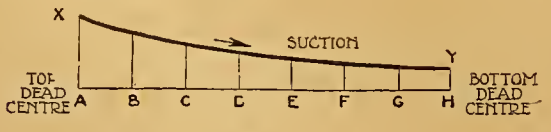


Fig. 1.

These pressures would be measured by the heights of the indicating column in our imaginery pressure-gauge, and these, in turn, could be represented by vertical lines drawn to scale through the corresponding points on the line A H.

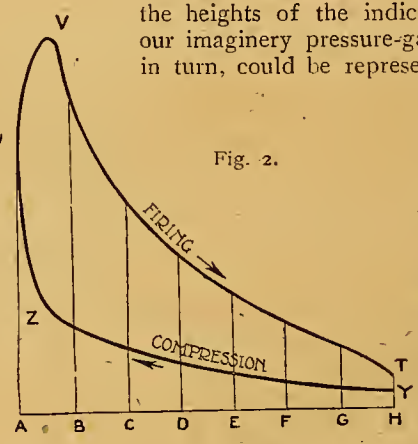

Fig. 2.

The Four-Stroke Cycle.

For the sake of simplicity let us deal with a four-stroke engine and first consider the suction stroke. As a general rule the pressure in the cylinder at the commencement of this stroke will be a little above that of the atmosphere, and will fall slightly as the piston moves to its "bottom dead-centre," so that the vertical lines representing the pressures will gradually diminish in length and the fluctuation is shown by the line X Y in fig. 1, which joins up the extremities of the pressure lines.

In a precisely similar manner the line Y Z W in fig. 2 will represent the fluctuation in pressure during the compression stroke as the piston travels back from "bottom dead-centre" (point H) to "top dead-centre" (point A), and here the pressures increase very considerably, and the vertical lines therefore increase in height to a corresponding extent. In practice the pressure increases steadily until the end of the compression stroke is very nearly reached. This is shown by the portion of the diagram between the points Y and Z, and at the latter point the pressure may amount to 100 lb. per square inch; ignition then occurs and the pressure jumps up almost instantaneously while the piston is moving over "top dead-centre" at the point W.

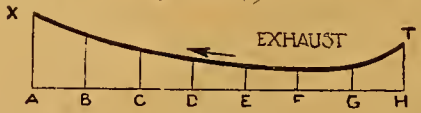

Fig. 3.

What Happens in the Cylinder.—

The firing or working stroke then commences, and the pressure continues to increase just beyond "top dead-centre" to a point such as V in fig. 2, and the maximum pressure may be as much as 450 lb. per square inch. It then falls off again as the piston moves to its "bottom dead-centre" as shown by the line V T, until, finally, the pressure represented by the height H T will not be greatly above that of the atmosphere.

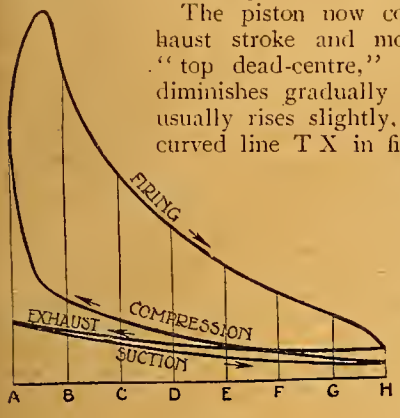

Fig. 4.

The piston now commences the exhaust stroke and moves back to the "top dead-centre," and the pressure diminishes gradually at first and then usually rises slightly, as shown by the curved line T X in fig. 3. The slight rise which is generally noticed, in practice, towards the end of the exhaust stroke is due to the back pressure which exists almost invariably in the silencer and exhaust pipe.

This completes the cycle of operation of the engine and another suction stroke then commences.

Owing to the fact that the variations in pressure during the suction and exhaust strokes are small compared with those during the compression and firing strokes, figs. 1 and 3 have been drawn to a different scale of pressure from that used in fig. 2, but if we combine figs. 1, 2, and 3, using a common scale of pressure, we obtain the peculiarly shaped area shown in fig. 4, which will be the complete "indicator diagram" for the engine under consideration.

Any four-stroke internal combustion engine, whether it be a large, slow-running gas engine or a small high-speed petrol engine, when working normally would give an indicator diagram roughly resembling fig. 4 in general outline.

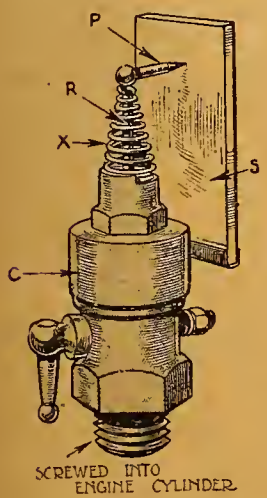

Fig. 5.

Indicators Actually in Use.

In the foregoing a purely imaginary method of obtaining the indicator diagram has been described, but several ingenious appliances have been constructed which, when attached to an engine, will trace out the diagrams automatically.

One of the simplest of such instruments is known as the "Micro-Indicator," and is shown diagrammatically in fig. 5. To the experimental engineer studying internal combustion engine phenomena, the apparatus conveys much information as to what is taking place inside the cylinder under observation.

It consists of a small cylinder C, fitted with a piston and having a bore of rather more than one centimetre, or roughly three-eighths of an inch, giving a piston area of one square centimetre. This small cylinder has a screwed boss at its lower end which fits the compression tap hole of the engine to be tested, while the piston carries a short rod R which protrudes

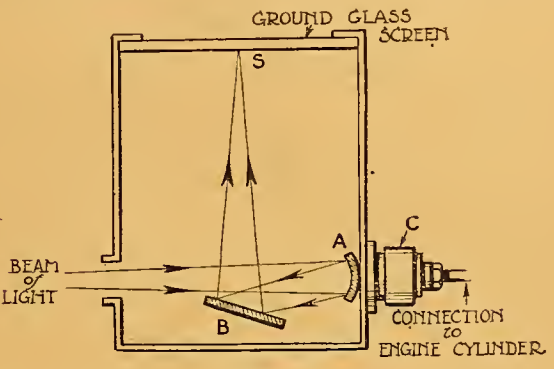

Fig. 6.

through the top of the cylinder C, and is fitted at its upper extremity with a fine horizontal pointer P. This just touches a detachable smoked-glass plate S, measuring about two inches by one inch. The piston is regulated by a strong external spring X, and as the pressures fluctuate in the engine cylinder the rod R and pointer P move up and down to a proportionate extent. The glass plate S is held in guides which are connected by rods, eccentrics, and gearing to an external portion of the engine crankshaft, but for the sake of clearness this mechanism is omitted from the diagram.

Direct Pressure Recording.

The backward and forward motion of the engine piston is, of course, converted into the rotary motion of the engine shaft by the connecting rod and cranks, and this rotary motion is reconverted back to "straight-line" motion by the above-mentioned mechanism, with the result that the glass-plate of the indicator exactly reproduces on a smaller scale the motion of the engine piston and in a direction at right angles to that of the pointer P.

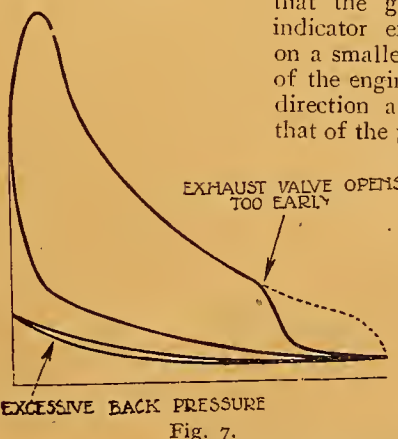

Fig. 7.

In this way the pressures in the working-space of the engine cylinder are automatically recorded throughout the cycle of operations, and an indicator diagram, similar in shape to that shown in fig. 4, will be drawn out on the smoked-glass plate.

What Happens in the Cylinder.—

Actually the size of the diagrams thus obtained is extremely small, and after "fixing" the plate by soaking in Canada balsam, they are either examined under a microscope or enlarged photographically.

Another interesting appliance enables the indicator diagram to be traced out on a screen by a rapidly moving spot of light, and as the carburetter controls or ignition timing are altered, so the diagram can be seen to change its shape.

The Watson Indicator.

This apparatus, known as the "Watson Indicator," is shown in a diagrammatic manner in fig. 6.

The engine pressures are recorded by the vibrations of a thin silicon-steel diaphragm enclosed in the casing C, which is connected up to a compression tap on the engine cylinder by means of a short tube.

The vibrations of this diaphragm are transmitted by a rod to a small mirror A, while a second mirror B rocks to and fro in exact harmony with the motion of the engine piston, being connected up by gearing, eccentrics, and rods with the engine crankshaft. Both mirrors are enclosed in a box having a ground-glass screen S at one end.

A powerful beam of light is projected on to the mirror A through an opening in the box, and is reflected back to the mirror B and thence to the screen S in the manner shown, and is focussed by lenses until it appears as a small bright spot.

The motion of the two mirrors is thus combined in the movement of the beam of light, and the spot on the screen moves so rapidly that the indicator diagram is traced out in the form of an illuminated line.

To the expert eye the indicator diagram tells at once what is happening inside the engine cylinder, and the area of the figure, combined with other data, gives a fairly exact measurement of the horse-power and efficiency of the engine.

In the case of two-stroke engines which depend on crank case compression, an indicator card, or diagram, can be taken for the crank case as well as for the working-space of the cylinder, and much useful data thereby obtained.

As an example of what an indicator diagram will reveal, let us examine fig. 7, which represents two faults in the engine under consideration.

Incorrect Valve Timing.

First it will be noticed that the curve corresponding to the firing stroke drops steeply at its lower end, the dotted line showing the more usual shape for this portion of the diagram. The steep slope points to the fact that the exhaust valve is opening too early and the area between the full line and the dotted line represents a loss in the efficiency of the engine.

Secondly, the curve corresponding to the exhaust stroke rises abnormally towards the end, and this shows the existence of excessive back pressure in the exhaust pipe and silencer.

The use of the indicator as a method of testing has long been in vogue for steam and gas engines, and its application in various forms to the high-speed petrol engine is becoming increasingly popular with the more scientific and advanced designers, proving as it does a quick, sensitive, and accurate means of testing and comparison.

B. G. MANTON (B.Sc. (Eng.), A.M.I.C.E.).

MISTAKEN VIEWS ON THE SIDECAR.

WHY does it so frequently occur that people who know least about a subject offer their opinions so readily? It would not matter if they were content with offering their opinions, but they are too apt to couch their opinions (usually wrong) as if they were facts.

Without wishing to appear in any way disrespectful, we cannot refrain from refuting the views expressed by a coroner in a recent case involving the question of the sidecar. In his address he said, "Of course motor cycles and sidecars are very dangerous, and lots of accidents have occurred with them all over the country." At this point a lady interrupted with the suggestion that they should be "done away with if you can't rely upon them," and further stated, with feeling, that "they ought not to be allowed." The coroner's next remark may explain why she was so decided in the matter. He said "If I were you I should not ride behind again." What he meant exactly it is difficult to say, unless she was guilty of the indiscretion of joy-riding on the pillion of the machine at the time of the accident. It is not at all clear, however.

But the most amusing part is yet to come; he went on to say that "those who have driven these machines tell me that when the driver of a motor cycle goes round a corner with any weight in the sidecar there is a tremendous strain on his arms. If the weight is considerable it pulls the driver over. It is very dangerous unless the rider drives very slowly around corners, takes the greatest possible care, and does not have too great a weight in the sidecar."

Unsatisfactory Theory.

It is quite obvious from this that the speaker has never driven one of these "dangerous machines" himself. "If the weight of the sidecar is considerable it pulls the driver over." Does he mean by this that the driver, exhausted and worn out by the strain of trying to get round the corner, rolls off the saddle in an agony of despair and is left behind? That sounds rather unsatisfactory from many points of view!

Certainly the driver should take every possible care, but then so should every user of the road, whether driving a six-cylinder car, a motor cycle, a donkey cart or a bath chair. All are equally dangerous at times. It might surprise the coroner in question to know that on most modern machines it requires very little skill indeed to drive without going through the usual formality of grasping the handlebars at all. Also, more accidents usually happen with a light sidecar, because of its greater instability, than with a heavy one.

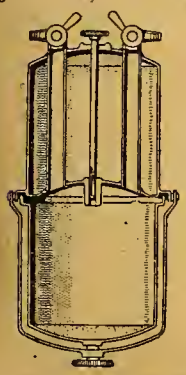
IDEAS: USEFUL AND INGENIOUS.

A Selection of our Readers' Home-made "Gadgets," with Practical Hints on Work in the Garage and on the Road.

Two Good Generator Tips.

Although practically all acetylene generators are used for supplying more than one lamp it is rather surprising that no provision is made for this by the makers and that recourse must be made to outside connecting pieces. This fact suggested to "H.C.," of Bayswater, an alteration in a generator of the ordinary type, which has proved of real value.

As will be seen from the illustration an extra gas tube is provided, and on each tube there is a small tap such as is used on model engines. The original single tube was removed, for owing to its fine bore there was a tendency for water to condense inside it and cause irregularity in the supply of gas. Both tubes are now of $\frac{3}{16}$in. bore, and their fitting is quite a simple matter, for it is only necessary to drill or punch holes through the top and bottom of the water container and solder the tubes in position. The taps are, of course, optional, but they are found to be a great convenience. An alternative to the foregoing arrangement would be to provide a T-piece at the top of the existing tube, but it is just as easy to fit two tubes and the gas is under better control.



Supplying two lamps direct from one generator.

An additional improvement to the generator consists of filling the bottom of the carbide container with solder, as shown in the sketch. This obviates the tendency of the bottom to crush in if undue pressure is applied in an attempt to make the joint gas-tight. The bottom of the container should first be tinned in the ordinary way with a soldering iron and then a quantity of molten solder be poured in, and the result is a bottom that will withstand very severe pressure.

Flywheel Brake with Ratchet Lever.

On machines equipped with outside flywheels an excellent supplementary brake may frequently be rigged up, the retarding pad being on the flywheel rim. Mr. J. Taylor, of Glasgow, suggests a steel rod pivoted to the footboard and carrying a fibre shoe to fit the rim against which it is to be pressed. Clipped to the top tube is a notched plate against which a suitably filed portion of the rod slides. A metal or wooden knob finishes the fitment and makes it convenient to handle.

Re-Timing a Magneto.

The magneto chain should not be removed for re-timing. It is much simpler to loosen the sprocket, leaving the chain without disconnecting it.

Rusty Rims.

If the bead of a cover parts from the walls, rusty rims are sometimes to blame. Once in a season the covers should be removed and the edges of the rims sandpapered and re-enamelled.

Over the Rough Patches.

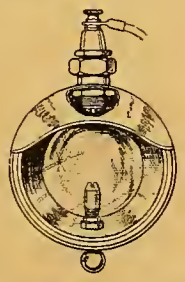
On nearing a patch of stones with a sidecar, work up a little impetus and then declutch to allow the outfit to roll over the new metal; the stones are not likely to cut the back tyre unless the engine is actually driving the machine.

The Spare Chain.

When two chains are used in the transmission it is a good idea to make up the spare chain in two lengths, of which the shorter length consists of the same number of links as the primary chain. With a few spare links one should then be proof against any emergency.

Utilising the Spare Plug.

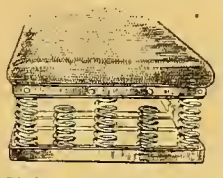
To prevent the spare sparking plug lying in idleness "C.S.M." drills a hole in the hood of his acetylene head lamp and passes the business end through into the interior, securing it inside by a thin nut of sparking plug thread. An insulated switch is fitted to the handlebar and the high-tension wire is led to this, two wires branching to the cylinder plug and to the spare respectively. When it is desired to light up, the water is turned on a few minutes in advance, and then the current diverted to the spare plug in the lamp, the spark across its points igniting the gas—and possibly blowing the glass out of the front if the precaution of slightly opening the door has not first been observed!



Lighting the acetylene lamp by electricity.

Supplementary Springing of a Pillion.

When a pillion seat "bottoms" in crossing potholes with a fairly heavy passenger, a reader signing himself "Bunny" recommends that a couple of old valve springs (A.J.S. in his case) be placed between the ordinary springs of the pillion seat. If the extra springs are rather shorter than the others no loss of resiliency occurs. This tip only applies to pillion seats with compression coil springs, of course.

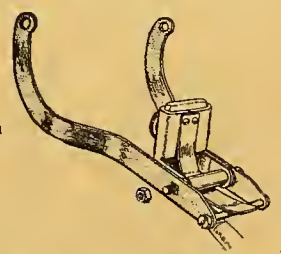


Utilizing old valve springs for a pillion seat.

Anti-vibration Lamp Bracket.

To those who suffer many broken filaments in electric head lamps a satisfactory spring bracket may be made very easily with some odd bits of steel plate and the usual handy man's tools. It is specially suitable for those machines equipped with a solid flat single tongue lamp bracket.

An oblong piece of plate is cut in from each side, so that a centre portion may remain the width of the lamp bracket



A device to prevent broken filaments.

The sides are bent backwards, the lower portions at right angles and the upper to enclose the bracket and slip over it. The two arms at right angles are drilled to take a bolt with squared ends, and one kept apart by a tubular distance piece. On the square ends of the bolt the two arms of the lamp bracket are secured. Two pieces of gramophone spring make up the spring which controls the movement of the bracket, the assembly being clearly shown in the sketch. On the flat back of the bracket clip a nut is brazed to receive a knurled head-locking screw and nut. This attachment was made by a reader who prefers to remain anonymous.

"HINTS AND TIPS FOR MOTOR CYCLISTS"—gives hundreds of useful "wrinkles." Price 2s. 3d. post free from "The Motor Cycle" Offices, Dorset House, Tudor Street, London, E.C. 4.

Insurance Problems.

A Special Feature in which Motor Cycle Insurance Questions are Answered and Discussed.

It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this feature has been formed to deal impartially with the various problems that are presented to us.

The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enable "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.

Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.

A Question of Responsibility.

"Alverston," writing from Wallasey, Cheshire, says: "All garages, repair depots, and the like display a notice to the effect that 'they are not responsible for any damage done to a car whilst being driven by one of their staff.'

"It is quite feasible that a repair job of some nature cannot be tried out unless the vehicle is on the road. Should a smash happen and we assume that the garage man is in the wrong, how do I stand if he repudiates responsibility? My insurance policy only covers accidents when I am driving, or, perhaps, an extra named driver, and the accident may have been caused by gross negligence.

"Is this notice only 'bluff'? Surely all reputable repair depots are covered, despite their calm repudiation."

The notice referred to is binding on the owner of the car provided it can be shown that the owner knew of it at the time he gave the order for the repairs, and if the notice is conspicuously displayed the court might hold that he would be presumed to have notice of it.

* * * *

Insuring Accessories.

Mr. W. Watling, Hammersmith, writing on the question of insuring accessories, says: "When insuring an outfit the full value of accessories is included. This may easily be £50. In my own case it exceeded this amount. I understand, however, that I should not be re-imbursed, even though every accessory was stripped from the machine and stolen. Is this so?"

The theft cover in connection with motor cycle insurance is of a total loss nature, that is to say, in the event of the machine itself being stolen, all accessories are included and taken into account when paying the loss. Very considerable difficulty has been experieneed by insurance companies in connection with this theft section, and such experiments as have been made providing for the payment for stolen accessories irrespective of the machine being stolen have ended somewhat disastrously. Very often it is impossible for the unlucky owner to say whether an accessory has been stolen or merely lost, which, of course, is quite a different thing. It is to be hoped that motor cycle insurance will follow in the same stages of progress as private car insurance, and that eventually the business will get on to such a basis as will permit insurance companies to include the theft of accessories in the same way as this item is included in a private car policy.

Increasing the Value of a Second-hand Mount.

Mr. Pennell writes: "Last August I purchased a 1916 A.J.S. for £70. During last winter I completely overhauled the machine, fitting many new parts, which naturally enhanced the value of the outfit. I think it is worth at least £90 at the present time.

"Of course, I had to declare the purchase price when insuring the machine, and what I wish to know is how I stand in this matter to-day if the machine should be damaged or stolen."

If Mr. Pennell is reasonably certain that his outfit at the present time is worth £90, that, obviously, is the amount at which he should declare its value in his proposal to the company he names. In the event of a total loss arising during the currency of the insurance, little or no difficulty would be presented, as the fair market value at the time of the loss would be based with regard to the fact that such special work had been done by the insured himself to his machine, and he being a competent engineer, would be given the full benefit of the fact by any reputable insurance company.

* * * *

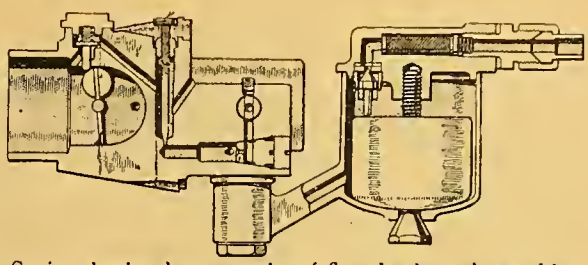
1,000 c.c.= 2½ h.p.?

Mr. Charles Hargreaves, Liverpool, is concerned about the insurance of a machine he is building, and says: "I am building a motor cycle at home, and when it is completed I intend to insure it. The engine, of my own design, will have a cubic capacity of nearly 1,000 c.c., but I, as the manufacturer, will rate it at 2½ h.p.—it may develop more, or it may not. Will the insurance company accept my rating, or will it be considered that this is a case where an exception should be made to the otherwise apparently irrevocable rule of basing premiums on manufacturers' horse-power ratings?"

Our enquirer here evidently proposes to set up an arbitrary distinction of his own when his home-made engine is completed, and whilst endeavours of this sort probably deserve success, we are afraid we cannot quite see any insurance company accepting an engine of 1,000 c.c. as 2½ h.p., for, as our correspondent states, it may develop more, or it may not. To begin with, the enquirer is not a manufacturer in the admitted sense, and this no doubt he will readily admit. An insurance, when it is granted to him, will be granted because he personally is considered a desirable risk, and the merits or demerits of his engine and his own horse-power rating of that engine will play a very little part indeed in the premium basis. It is not a case which would often happen.

A SIMPLE AUTOMATIC CARBURETTER.

Good All-round Results from the Ekon.



Section showing the construction of float chamber, submerged jet, pilot jet adjustment and throttle operated cut-off valve for pilot jet.

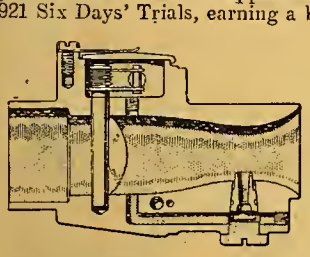
CONTENTIOUS literature and wordy arguments on the merits of single- and two-lever carburetters are almost wearisome in their constant recurrence.

For this reason it is not proposed here to enter into lengthy discussion on the advantages of either type. Let it suffice that experience proves that a first-class single-lever carburetter is at least as suitable for the average rider as any other type, and more than desirable for the absolute novice.

Our latest experience of an automatic carburetter has been with the Ekon, marketed by Geoffric & Keene, Ltd., of Broad Street Place, London, E.C. This instrument some of our readers will remember under the name of the "Eta" described in *The Motor Cycle* some two years ago.

Success of Earlier Models.

Manufacturing problems have delayed the production of this instrument, and though it made a meteoric appearance in the 1921 Six Days' Trials, earning a bonus



Sectional plan illustrating the injector cone and compensating passage.

of 30 marks for fuel consumption on a 993 c.c. Matchless sidecar, it is only now ready for the market.

Before going into details of the carburetter it may be stated that it is thoroughly well made, is simple to adjust, economical in use, provides a very wide range of flexibility with no flat spots, and appears to give a full power range. Like most accurate instruments, it is highly sensitive to air leaks, and users are recommended to pay special attention to their induction systems and inlet valve guides, but apart from this feature, which after all affects all carburetters to some degree, we have found the Ekon as near perfection as any mechanical device can be. It is simple and robust in construction, and with only one external adjustment, a screw-down needle for the pilot jet.

Controlling Action Described.

Fuel passes to a top feed float chamber and thence to a submerged controlling jet. In order to reach the main venturi the fuel then passes through an injector cone which, besides being acted upon by the air velocity in the normal manner, is also controlled by the action of the depression in the inlet pipe on a balancing tube leading to the back of the injector from a point on the atmospheric side of the throttle.

Without this tube the suction on the jet at high speeds with big throttle openings would be excessive but the compensating tube, acted upon at the point of greatest depression (suction), tends to draw a back current of air through the injector, thus limiting the amount of petrol issuing therefrom. It is claimed that by correctly proportioning the orifices an automatic compensation is introduced which ensures that the depression acting on the fuel will remain proportionate to the air velocity under all conditions.

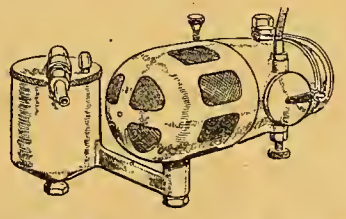
Main Charge Unaffected by Pilot Jet.

A pilot jet with its own air intake is employed for slow running purposes, but in order that the strength of the mixture supplied from this source shall not effect the main charge, the pilot is cut out of action as the main passage is opened up.

In the gas passage from the pilot jet there is a small valve chamber above the main butterfly throttle, and a spring-loaded disc valve has its seating therein. When the throttle is nearly closed a circular cam mounted on the edge of the throttle vane strikes the stem of the small valve and opens up the passage from the pilot jet, but as the throttle is opened the cam leaves this stem and the valve is allowed to drop, thus completely eliminating the action of the pilot jet.

Fitting and adjusting the carburetter is simplicity itself. After paying due attention to possible sources of leakage, the carburetter is flooded slightly and the engine started with the throttle about one-fifth open; the pilot jet previously should have been well opened out, then the throttle is closed down and the pilot screwed back until the engine runs evenly and slowly. This is all that is necessary, for although the metering orifice may be changed for a larger or smaller size, if desired, the instrument is calibrated before leaving the works and is not likely to need alteration. Our own experience in this respect is interesting. The Ekon was fitted experimentally just before a long-distance trial which involved the ascent of Bwylch-y-Groes and other severe hills. So promising were the results that we decided to retain the carburetter on the trial, but judging from previous experience with other instruments, we decided to fit a slightly larger jet. All went well, and excellent results were obtainable, but the consumption was very slightly above normal, so that on returning we decided to fit the original jet as supplied by the manufacturers. As a direct result consumption has improved to well below normal and the engine is livelier throughout its range of action, and if anything pulls better on hills.

In conclusion we may state that if any normal rider requires better results than those obtainable with the Ekon carburetter, to say the least of it, he is ambitious.



The Ekon carburetter, showing the large gauze-covered air inlet.

FRENCH ROAD RULES.

MOTOR cyclists in France are warned, under the new *Code de la Route*, that before proceeding on the road every driver must carry with him a grey card showing that the vehicle has been registered, a pink card showing that he is capable of driving the vehicle, and a driving permit for sidecars and cycle car drivers. On the machine itself there must be a licence disc (motor bicycles only)—or, if a passenger is carried on the pillion, two discs—and a plate bearing the owner's name, profession, and residence. In addition to this, the machine must carry two registration plates bearing the number issued by the Service of Mines (registration numbers).

Transverse Number Plates.

Motor cycles must have the front registration number fixed transversely and not in the direction of travel. Exhaust cut-outs are forbidden in towns and villages and when approaching animals on the road; in the open country a Klaxon horn, which can be heard at a distance of at least 100 metres, must be carried. In towns a bulb horn only is permitted.

From dusk sidecars must have two lamps showing a white light in front, and a red lamp must be carried at the rear on the left, clearly illuminating the registration plate also. In the country the motor cyclist must have at least one head lamp lighting the road at 100 metres, which must not shine more than a metre above the road. It must be extinguished on arriving in a town. Solo machines need only have a red reflector at the rear; in any case, the use of a powerful head light is forbidden in towns. The speed is unlimited only on the open road.

ROAD TESTS of NEW MODELS

The McKechnie Spring Frame Sidecar Outfit.

SPECIFICATION.

ENGINE: Coventry-Victor flat-twin, 75 × 78 mm. = 688 c.c.	*GEAR BOX: Jardine four-speed, 4·7 to 1 top.*	*TYRES: 28 × 3in.*
FRAME: McKechnie spring.	*LUBRICATION: Showell mechanical pump.*	*CARBURETTER: Cox or Amac.*
TRANSMISSION: ⅝ × ⅜ in. chains.		*SIDECAR: Millford.*
		PRICE: Solo £125, Sidecar £180.

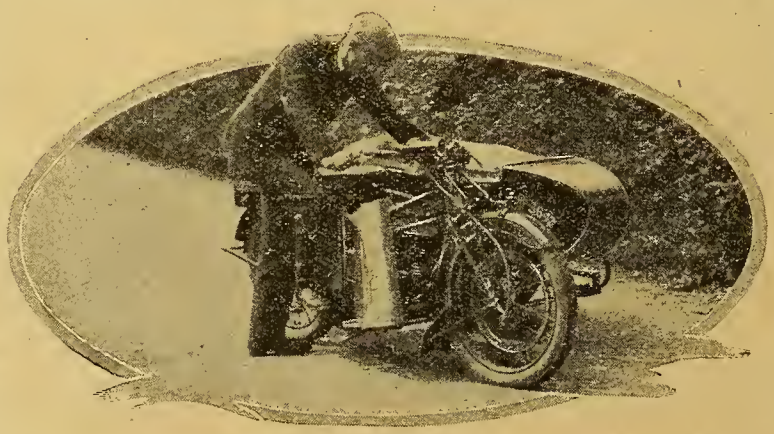
A DESCRIPTION of the McKechnie spring frame has already appeared in the pages of this paper, and, as considerable interest has been evinced by the public in its unorthodox design, it is only necessary to recapitulate the salient features of the frame.

It will be remembered that the head lug is attached rigidly to the rear fork ends by two tubes on each side; between these duplex members lies a unit composed of the engine, gear box, tank, footboards, saddle, etc. This assembly, in a subsidiary frame, is suspended by a leaf spring reaching from the head lug to the carrier, and pivoted torque tubes connect the gear box bracket to the back axle.

Comfort Well Assured.

In addition to the large range of action provided by the long spring, the designer has not fallen into the error of fitting a small saddle and tyres, for comfort is improved by a Terry spring saddle and 28 × 3in. tyres; front suspension is provided by a Montgomery fork.

On the occasion of our test we were offered either a solo or sidecar machine, but, having previously tried out a solo model over a course which included ridged and furrowed fields, we were anxious to test the machine under the most disadvantageous circumstances—that is, with a sidecar attached and over bad roads.



An outfit on which bad roads can be negotiated in comfort, the 688 c.c. McKechnie

On taking over the machine we found that it was equipped with aluminium leg screens which extended the full length of the engine and acted also as air scoops directing the main current of air over the cylinders. These screens proved most practical in service, keeping the rider absolutely clean, though naturally they are inclined to accentuate mechanical

Road Tests of New Models—

noises to some degree. The Coventry-Victor engine is not fitted with exhaust lifter mechanism, and just at first one notices the lack of this fitting when starting. However, after a few experiments it is quite easy to swing the engine over compression by the kick-starter.

Testing over Pot-holes.

Having once started the engine we took the road with the idea of searching out pot-holes. Such a search is not difficult even in these days, and within a few miles of Coventry we knew of a long stretch of rough road which served its purpose admirably. No attempt at avoiding bumps was made; rather were they sought out, and the machine was driven at speeds varying from a crawl to approximately double the legal limit over all surfaces. On no occasion was shock felt; the rider has the curious sensation of floating, though the wheels and main frame appear to be thrown about over bad roads in the normal manner.

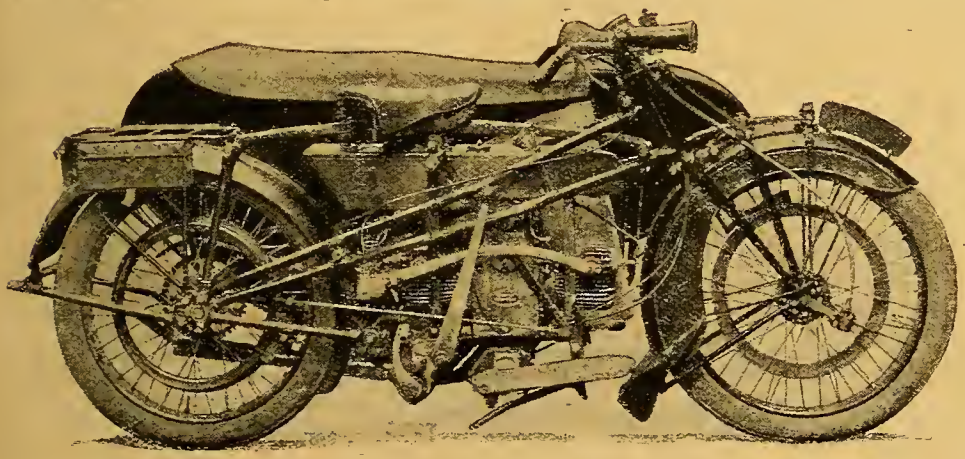
As is the case with many spring frame designs, the machine is at its worst at low speeds, but this "worst" is such an improvement on the jarring of a rigid frame that one cannot help feeling surprised at the lack of discomfort. The fact that the wheels are attached to a rigid frame eliminates the possibility of side play—a trouble which is too often in evidence in more usual designs.

Four Speeds with Medium Power.

With regard to the running of the engine and transmission, we were well satisfied with the pulling powers of the Coventry-Victor engine, while the four-speed Jardine gear provides a very convenient range of ratios. The fourth ratio permits the top gear to be somewhat higher than is usual for medium-sized engines so heavily laden; nevertheless, on the 4.7 to 1 ratio, the machine is quite capable of carrying its rider and passenger up normal main road hills; third speed is handy for the easier single-figure gradients, while second is usually used for starting purposes and really bad hills. This leaves first as an emergency gear which need never be used in ordinary circumstances.

Fitted with a Cox carburetter, the engine ran perfectly throughout our test, being very flexible and capable of pulling well at quite low speeds. A Showell mechanical pump relieves the rider of all anxiety with regard to lubrication. Our passenger testified to the comfort of the Millford sidecar, the chassis of which is rigidly constructed and stoutly attached to the main frame.

The only slight criticisms which we have to put forward are that the foot brake is not too conveniently arranged nor too powerful in action, and that the swish of the driving chains that is usual without side flywheels was slightly accentuated by the metal leg screens; this point, however, is having the attention of the manufacturers, and it is probable that in the near future it will be largely eliminated by the substitution of non-metallic shields. As regards riding position, the saddle is well forward, and the handle-bars are in a natural and comfortable position.



Rider tank, engine and gears are completely insulated from direct road shocks by the McKechnie system of springing. The near leg shield has been removed to show the frame lay-out.

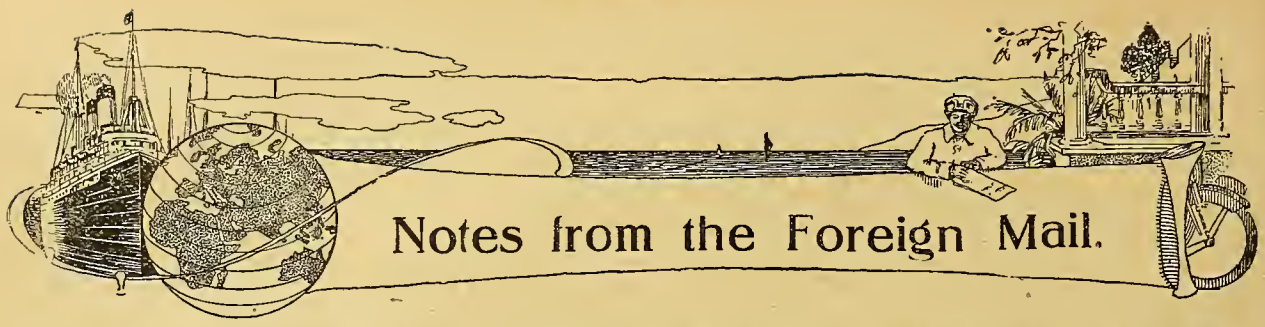
AS OTHERS SEE US!

IT is not often that a lay newspaper pays such specialised attention to a competition of its local motor cycle club, but the following amusing report of an Irish event is an exception and worth quoting. The writer says:—

"Some smart halts were observed (when the competitors began to arrive at the hill), many coming to rest with their front wheel almost on the threshold of the well-known pub. Within a short time over a score had assembled. The committee got busy with red flags and white tape. The welkin rang with a crackling assortment of exhausts. A blue haze rose from the assembled throng. In the distance a Scott whined like an overladen and self-satisfied bee. An A.J.S. banged herself out of sight over the hill to the south. Mysterious last minute adjustments were furtively performed. The time-keeper, smiling grimly, oiled up his split-second chronometer. An hour later the first man to start wheeled his machine to the tape.

"The procedure at the start is somewhat tame. In fact, the whole thing is tame only for the off-chance that someone will obligingly break his neck.

The total length of the course was about 200 yards, and the direction was uphill. The reason it was uphill is sufficiently obvious. The committee expect accidents, but do not deliberately arrange them. The first competitor, having whiled away another interval of time in mild repartee with the expectant spectators, starts. The flag drops, the stop-watch back-fires, and the breakneck artist covers the first one hundred yards of his journey at the alarming pace of four miles per hour. At the end of this he pauses to whisper a few sweet nothings to a long-suffering official who has to see that his front wheel is on the tape. On the word of command his right hand performs some lightning manœuvres among sundry levers, the engine suddenly screams in agony, a grating whirr, a cloud of blue-tinged dust, and he is gone. The sound of his exhaust dies away suddenly, and he has had his half-dollar's worth. And so the next."



Notes from the Foreign Mail.

Overseas and Continental News. Popularity of British Machines Abroad. France and Motor Assisted Bicycles.

Motor-Assisted Bicycles.

If the ordinary type of bicycle has become less popular in France, motor-assisted bicycles are the rage, and those who make them are hard put to it to keep the supply equal to the demand.

The Swiss-Italian Hill Climb.

There will be a day's rest, on August 6th, in the course of the International Six Days Trials, and on the same date will be held the Monte Bré hill climb near the resting point. This should be a most interesting trial, as it is likely to attract some of the best known Italian riders, since the *venue*, Lugano, is on the borders of Italy.

Motor Cycling in America.

One would hardly think it, but there is a great similarity between the position of the motor cycle in France and the United States, because in both countries it is considered bad form to ride a motor bicycle. While at the Grand Prix, a prominent French motor cyclist bewailed the fact that he did not know of a single man of his standing who would accompany him on his motor bicycle. Here is the American point of view: "We know that no person on earth is more gentlemanly than the Englishman, yet he is not too big nor too embarrassed to ride a motor bicycle." The American writer goes on to say: "that if the motor cycle can gain such a prestige in England, so it might in America. All we have to do is to get busy."

An Austrian Appreciation.

Referring to a Triumph ridden in some races at Baden, an Austrian paper says that "For weeks we heard reports of this fairy tale of motor cycles. One was enthusiastic about its four valves and other refinements; another praised the incomparable cool running of the single cylinder, its speed, and other virtues. All this gossip about the new Triumph made us sceptical about its performance, for all predictions have the same fate as predicted revolutions, but it was different last Sunday. Karl Kodric was the victor, how, when, and where he wished, and especially in the unlimited capacity class his triumphant feat was important in three respects: as a victory of a relatively small engine, as a triumph of the single cylinder, and as a proof of the highly successful motor cycle industry of the Island Empire.

Parisian Motor Cycle Police.

Starting operations not very long ago with only a dozen machines, the Paris police force now has eighty motor cycles in commission.

Motor Cycles in Denmark.

Machines well known on the British market figured prominently in the recent Fanöe race meeting. A Levis won the 275 c.c. class, an F.N. the 350 c.c., a Norton the 500 c.c., an Indian the 650 c.c., a Blériot the 800 c.c., an Indian the 1,000 c.c. class, while a Henderson was triumphant in the class for machines over 1,000 c.c.

A Novices' Competition in Natal.

Organised by the Maritzburg Motor Cycle Club, the Voler Trial was recently run off. The object of the competition was to induce novices to compete among themselves, so that they might acquire a keenness for competition riding. The first three riders were W. H. Anley (269 Sun-Villiers), G. Varly (989 Harley-Davidson), D. M. Smith (349 Douglas).

A New Italian Motor Cycle.

Apart from England, if one wishes to find originality in motor cycle design one must go to Italy; an example of this is the wonderful triumph of the Garelli in the Grand Prix.

The latest development is a four-cylinder 56×100 mm. (984 c.c.) water-cooled machine, known as the Garabello, built exactly on car lines, with a monobloc engine, honeycomb radiator, and shaft transmission.

An American on British Machines.

Owing to tariff duties, one naturally imagines that American motor cycle experts have few chances of testing British machines, but apparently they have only to go to Toronto (Canada), where Mr. W. J. Porter has a number of British machines in stock. An American's views of such machines as the French-made A.B.C. are distinctly interesting. Apropos this machine, he writes: "When the lowest of the four gears is engaged and the clutch let in, oh! boy, what a sensation." Again, when testing a Triumph he says: "I started off more interested in the sensation produced in the single-cylinder engine than in any other feature. The impression I received was that of gliding along in an effortless fashion with someone in the distance beating a tom-tom."

Motor Cycles in Calcutta.

According to Lord Ronaldshay, there were 863 motor cycles in Calcutta in 1918, and 1,385 in 1920.

Motor Cycles in Victoria.

It is worthy of mention that there are more motor cycles ridden in Victoria (Australia) than in the whole of Canada, there being 14,000 in Victoria and 9,902 in the whole of Canada. This shows what a remarkable influence good roads have on the development of motor cycling.

An Important Italian Race Meeting.

The Circuito Valle Ticino was won by the Italian champion rider Domenico Malvise on a Triumph. In the 350 c.c. class the victor was Visioli, who won the 350 c.c. class in the Grand Prix. A Triumph was second in the 500 c.c. class, and a Norton third, while the second machine in the 350 c.c. class was a Douglas.

Continental Racing Tracks.

Brooklands track is certainly the envy of all Continental nations; while in Strasbourg recently a prominent French official entirely attributed the victory of the British machines in the Grand Prix to the fact that the French had no track like Brooklands. A French racing track has been projected on several occasions, but has never materialised. Italy, however, bas the honour of having the first Continental racing track at the Parc Royal of Monza, about seven miles from Milan. The track is actually in construction, and will measure 10 km. (6¼ miles) per lap.

At Bloemfontein.

Handicap speed trials recently held in Bloemfontein by the O.F.S. Automobile Club attracted over one thousand spectators. In the solo class up to 600 c.c. the winners were H. Daubney (348 Douglas), P. C. Ferreira (348 Douglas), and J. Price (499 Triumph). In the unlimited solo class Daubney again won on the same machine. Mayhew (998 Indian) was second, and Kruger (490 Norton) third. In both the sidecar class up to 600 c.c. and the unlimited sidecar class J. L. Kruger (490 Norton sc.) was the winner. The fastest actual time was made in the sidecar events by E. H. Petersen (989 Harley-D. sc.), while E. L. Mayhew (998 Indian) made fastest time of the day in the unlimited solo class.

CLUB NEWS

A successful competitor in the Stourbridge, Kidderminster, and Wolverhampton clubs recent inter club hill climb. E. Wheeler (499 c.c. Sunbeam sidecar) starting in the 500 c.c. sidecar class.

Birmingham M.C.C.

One of the most successful events at the recent gymkhana at Knowle required the entrants—solo riders only—to ride to a certain point, then dismount, and push their machines backwards to the start.

Marlow and District M.C.C.

The route for the recent annual tour was through Somerset into Devon and Cornwall as far as St. Ives, returning along the north Cornish coast through Tintagel, Boscastle, Bude, and Taunton to Bristol and thence *via* Newbury and Reading to Marlow, approximately 600 miles. Very little trouble of any kind was experienced on the road. A portable wireless set was carried, which gave some excellent results.

Kingswood and District M.C. and L.C.C.

Eighty miles were covered in the course of the first reliability trial organised on the 15th ult. The event was an unqualified success. The results of the run, judged on points lost, were as follows: 1, C. H. King (348 Douglas), 1; 2, S. A. Hatherell (550 Triumph), 2; 3, A. J. Wood (348 Cotton-Blackburne), 5; 4, W. F. Moon (348 Douglas), 9; 5, A. East (633 Norton sc.), 11; 6, J. H. Williams (348 Douglas), 12.

Wallington and District M.C. and L.C.C.

The sporting trial which took place on Saturday, the 22nd ult., started from Cobham at 3 p.m., the course being over a circuit of 80 miles, divided into two sections of 40 miles each, and including about two miles of sand at Thursley, in addition to numerous severe hills. High Button Hill attracted a number of spectators, and some spectacular ascents were made. Results:

ALLAN GRUZELIER CUP.—Reg. Green (490 Norton).

GOLD MEDALS.—A. B. Lavy (499 Sunbeam), H. B. Browning (349 A.J.S.), and E. Barton (976 Matchless sc.).

SILVER MEDAL.—A. Headlam (498 Zenith-Bradshaw).

Doncaster and District M.C.C.

The speed trials held on the Sandall Beat Road, Doncaster, were a complete success, and, despite a strong wind, competitors recorded some good times. R .T. Cawthorne (490 Norton) made the fastest time of the day. Results:

SIDECAR MACHINES (500 c.c.).—1, R. Cawthorne (490 Norton), 27⅘s.; 2, E. Searle (499 Sheffield-Henderson), 29s.

SOLO MACHINES (250 c.c.).—1, R. L. B. Taylor (247 Levis), 37⅘s.; 2, H. C. Dobbs (211 Levis), 37s.

300 c.c.—1, R. Wood (249 Massey-Arran), 30s.; 2, F. Reynard (269 Monopole), 32⅕s.; 3, W. W. Wiltshire (292 Omega-Jap), 33⅗s.

350 c.c.—1, R. Lucas 349 Sheffield-Henderson), 26⅘s.; 2, R. Wood (249 Massey-Arran), 27s.; 3, R. Gray (348 New Scale), 27⅕s.

500 c.c.—1, R. Cawthorne (490 Norton), 24⅕s.; 2, R. G. Flint (490 Norton), 25⅘s.; three tied for third place with 25⅗s.—E. Searle (499 Sheffield-Henderson), R. Lucas (349 Sheffield-Henderson), and R. Wood (249 Massey-Arran).

750 c.c.—1, R. T. Cawthorne (490 Norton), 24s.; 2, R. G. Flint (490 Norton), 24⅗s.; 3, R. Lucas (349 Sheffield-Henderson), 26s. Winner's speed, 75 m.p.h.

UNLIMITED.—1, R. T. Cawthorne (490 Norton), 23⅖s.; 2, W. H. Rhodes (998 Indian), 24⅕s.; 3, R. G. Flint (490 Norton), 24⅘s. Winner's speed, 76.92 m.p.h.

Ipswich and District M.C.C.

Organised by this club, a joint speed event, in which some fifty riders represented Suffolk, Norfolk, and Essex, was held on Saturday afternoon, the 15th ult. Some excellent speeds were put up, and results of the event are as follows:

STANDING STARTS.

750 c.c.—1, E. C. Baldwin (499 Sunbeam), 37s.; 2, R. Thurlow (499 Triumph), 43⅕s.

TWO-STROKES.—1, J. Whisstock (247 Levis), 44⅗s.; 2, A. V. Adams (269 Excelsior), 47s.; 3, W. J. Coe (249 Velocette), 51⅖s.

500 c.c. SPORTS MACHINES.—1, R. F. Fenn (499 Triumph), 29s.; 2, A. G. Mann (499 Sunbeam), 30⅖s.; 3, K. S. Duncan (499 Sunbeam), 31⅖s.

350 c.c. TOURING.—1, W. J. Whisstock (247 Levis), 44s.; 2, C. Dansie (348 Douglas), 45⅗s.

UNLIMITED SPORTS MACHINES.—1, R. F. Fenn (499 Triumph), 23⅖s.; 2, A. G. Mann (499 Sunbeam), 30s.

500 c.c. TOURING MACHINES.—V. Revett (499 Rudge-Multi), 45⅖s.

350 c.c. SPORTS MACHINES.—1, W. J. Pretty (349 A.J.S.), 38⅗s.; 2, A. V. Adams (350 Diamond), 39⅕s.

UNLIMITED TOURING MACHINES.—1, E. C. Baldwin (499 Sunbeam), 36⅖s.; 2, B. B. Winter (998 Indian), 37s.

FLYING STARTS.

TWO-STROKES.—1, A. V. Adams (269 Excelsior), 34⅕s.; 2, J. Whisstock (247 Levis), 36⅕s.

350 c.c. SPORTS MACHINES.—1, J. F. Rose (350 B. Precision), 30s.; 2, W. J. Pretty (349 A.J.S.), 32s.

350 c.c. TOURING MACHINES.—1, C. Dansie (348 Douglas), 40s.; 2, W. J. Coe (249 Velocette), 42⅘s.

500 c.c. TOURING MACHINES.—1, E. C. Baldwin (499 Sunbeam), 31⅕s.; 2, V. H. Revett (499 Rudge-Multi), 41s.

500 c.c. SPORTS MACHINES.—1, R. F. Fenn (499 Triumph), 23⅗s.; 2, A. G. Mann (499 Sunbeam), 25s., and E. C. Rose (500 N.U.T.), 25s. (tied).

750 c.c. TOURING MOTOR CYCLES.—1, H. Beacon (293 New Imperial), 30⅗s.; 2, F. J. Rose (350 B. Precision), 31⅗s.

UNLIMITED SPORTS MACHINES.—1, E. C. Rose (500 N.U.T.), 24⅕s.; 2, R. F. Fenn (499 Triumph), 24⅖s.

UNLIMITED TOURING MACHINES.—1, B. B Winter (998 Indian), 30⅖s.; 2, E. C. Baldwin (499 Sunbeam), 30⅗s.

STANDING STARTS.

600 c.c. TOURING SIDECARS.—1, R. W. Tracey (770 B.S.A. sc.), 44⅘s.; 2, E. H. Mayhew (450 Triumph sc.), 47s.

UNLIMITED TOURING SIDECARS.—1, B. B. Winter (998 Indian sc.), 44⅕s.; 2, S. C. Butler (650 Zenith sc.), 50⅖s.

FLYING STARTS.

600 c.c. TOURING SIDECARS.—1, W. R. Tracey (557 B.S.A. sc.), 36⅕s.; 2, E. H. Mayhew (550 Triumph sc.), 40s.

UNLIMITED TOURING SIDECARS.—1, B. B. Winter (998 Indian sc.), 36s.; 2, S. C. Butler (650 Zenith sc.), 42⅕s.

STANDING STARTS.

600 c.c. SPORTS SIDECARS.—1, R. F. Fenn (499 Triumph sc.), 35⅖s.; 2, A. G. Mann (499 Sunbeam sc.), 37s.

UNLIMITED SPORTS SIDECARS.—1, R. F. Fenn (499 Triumph sc.), 36s.; 2, A. G. Mann (499 Sunbeam sc.), 38s.

FLYING STARTS.

600 c.c. SPORTS SIDECARS.—1, E. C. Rose (500 N.U.T. sc.), 28⅗s.; 2, R. F. Fenn (499 Triumph sc.), 28⅗s. (Rose winning tie).

UNLIMITED SIDECAR MACHINES.—1, R. F. Fenn (499 Triumph sc.), 29⅕s.; 2, E. C. Rose (500 N.U.T. sc.), 29⅕s.

R. F. Fenn (499 Triumph) made fastest solo time of day; E. C. Rose (500 N.U.T.) fastest sidecar time; and B. B. Winter (Indian) won the Novices' Prize.

Honiton M.C. and L.C.C.

A new club has been started here, and already the membership has reached as many as fifty enthusiasts. A short evening trial was organised recently and attended by satisfactory results. It is hoped to arrange a more elaborate reliability trial in the near future.

Redhill, Reigate and District M.C.C.

The winner of the cup in the President's Cup Trial held on Wednesday, the 26th ult., was Chaplin, riding a 494 c.c. Douglas solo; gold medals were awarded to Faulkner (550 Blackburne), Harris (976 J.A.P. sc.), Gunnell (557 B.S.A. sc.), and Headlam (498 Zenith-Bradshaw sc.).

Worcester and District M.C.C.

In company with the Worcester M.C. and the Malverns M.C.C., a visit was paid on the 20th ult. to the Austin Motor Works, at Longbridge, Northfield. Tea was provided in a specially allocated messroom, and afterward the members witnessed the final operations in building the cars. During the time the members were having tea the club was honoured by an address of welcome from Sir Herbert Austin. Mr. J. Howell responded on behalf of the members.

Connaught M.C.C. (Birmingham.)

A branch is being formed in Birmingham and district, and it is proposed to hold a reliability run devoid of freak features during late August or early September. All Midland owners of Connaught motor cycles are invited to become members of the club; the run will be held over a course approximately 100 miles in length, to be covered at 20 m.p.h. Communications should be addressed to the Bordesley Engineering Co., Ltd., York Mills, Witton Lane, Aston, Birmingham.

Surrey M.C. and L.C.C.

An average gradient of 1 in 10 for a third of a mile was chosen for the hill-climb held recently near East Worldham. Formula results:

300-600 c.c. SOLO.—1, S. W. Mansell (499 Rover); 2, W. J. Collis (499 Rudge); 3, F. P. Verney (500 N.U.T.).

Fastest time: S. W. Mansell (499 Rover), 33.8s.

UNLIMITED.—1, H. C. Mansell (349 A.J.S.); 2, H. Medcalf (Bugatti);

Fastest time: P. W. S. Bulman (650 Zenith), 29s.

UNLIMITED C.C. (Standing Start, Stop, and Restart).—1, R. M. S. Maxwell (398 A.B.C.); 2, W. E. Willson (Alvis).

Fastest time: P. W. S. Bulman (650 Zenith), 45.3s.

MACHINES OF 1914 OR EARLIER MANUFACTURE.—1, H. Medcalf (Bugatti); 2, W. J. Collis (499 Rudge).

Fastest time: W. J. Collis (499 Rudge), 34.6s

THREE-WHEELERS AND SIDECARS.—1, F. N. Edney (998 Indian sc.); 2, P. W. S. Bulman (650 Zenith sc.).

The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address

THE CHARMS OF 12 M.P.H.

Sir,—Allow me to protest against the abolition of the speed limit. It is only in very rare cases that a speed in excess of 20 m.p.h. is safe on the road. My own machine, I know, is capable of more, but very rarely do I let it exceed that speed. In the last year I know I have not ridden more than 50 miles in all at above 20 miles an hour.

The charm of motor cycling is that it enables one to see the country. One cannot admire the scenery and drive at 20 miles an hour. Fifteen is possible, but not as safe as 12. If one wishes to go fast there is the train, but the motor cycle should not be allowed to blind along at 35 miles an hour.

Bishop's Stortford. "DIE HARD."

THE BATTLE OF TYPES.

Sir,—Your correspondent Mr. J. G. Newbigging seems to be labouring under a delusion when he makes the statement—"The woolly, petrol-drinking, noisy, ineffective average two-stroke."

One can scarcely call the average two-stroke "petrol drinking." 125 to 150 m.p.h. is fairly economical, I should think, but perhaps Mr. Newbigging can inform us how he tunes his "steady-plugging-pull-for-hours-without-getting-faster" P. & M. or B.S.A. to do this?

Again, I *have* heard noisy four-strokes.

The average two-stroke has a much softer purr than the bark of the average four-stroke.

Now to the ineffective stage!

Perhaps Mr. Newbigging has not heard of the T.T. races; if he has not, it may perhaps broaden his already highly fertile mind to get a copy of the T.T. number of *The Motor Cycle* and study the performance of the Levis and Scott Squirrel, also to read the wonderful performance of G. S. Davison in the Grand Prix races at Strasbourg and Spa.

J. Booth's performance in the Durban-Johannesburg might also enlighten him. T. E. J. MEADWAY.

CREDITABLE AMATEUR DESIGN. At a first glance one would imagine this racy looking vehicle to be a 100 m.p.h. Brooklands car instead of the true cyclecar which it is. An old Precision twin engine, Sturmey gear box and belt-cum-chain drive compose the "innards," while the chassis is ash reinforced with steel plates, the aluminium body, except the Ford radiator shell, being also home made. The owner who signs himself "Diplomat" wishes to remain anonymous.

"BREAKFALL."

Sir,—I was much interested in "Nautical Matthew's" letter, and I agree with him that a person with a knowledge of breakfalls will come through a nasty accident unhurt, while one with no knowledge of them may be severely injured.

About two years ago I learnt some breakfalls, and last summer while riding through a town on the South Coast I ran into a Ford van. I was travelling at 15-20 m.p.h. when the collision occurred, and I was flung over the bonnet of the Ford. I remember keeping my head tucked in, and the next thing I knew I was sitting by the side of the road quite unhurt, while my bicycle was lying under the Ford.

I am sure that if I had not known how to breakfall I should have landed on my head. AP-7536.

Windsor.

WHAT IT COSTS TO TOUR.

Sir,—I find the big hotels are not to my idea of comfort and satisfaction. The best way for the man of moderate means is to look for commercial hotels, *i.e.*, where commercial travellers are always staying. They are the most reasonable and the most comfortable. Many of these are temperance hotels and very homely. The quickest and best way to find the popular hotel in any small town is to call in a local shop, and the shopkeeper will always know where his travellers stay. The prices mentioned by your correspondent are most unreasonable for a motor cyclist to pay. 5s. for a dinner, 3s. 6d. for bed, and 3s. for breakfast for each person is quite enough. J. P. NEVILLE.

Sir,—Being an average motor cyclist with only moderate and limited means, but wishing to see and realise the benefits of my own country, I travelled according to my pocket, which, by the way, is the best place for one's pride if one wishes to be economical.

Roughly my tour was—London, Aberdeen, Inverness, Oban, Lake District, Carnarvon, Aberystwyth, Chepstow, Birmingham, Bournemouth, Littlehampton, London; which totalled 2,034 miles.

The outfit was a 1918 595 c.c. Douglas sidecar, and carried my wife and son age 14, for whom I was usually charged adult's rate. The time taken was 30 days, and cost in all £49 11s., from which £4 7s. could be deducted for tyre, tube, repair to frame, and several non-essential articles purchased. We were able to live well, saw all the interesting sights en route, and spent wet evenings in theatres or cinemas.

Forty-five pounds for 30 days works out at 30s. per day, of 10s. each, and includes petrol, oil, tolls, amusements, etc. How is it done? My advice is steer clear of all big hotels irrespective of the number of stars (I am an A.A. member and appreciate their advice and assistance, except in hotel accommodation). On entering a town enquire from the police as to where the commercial hotels are situated, they are usually homely and moderate. As for meals, you can generally obtain what you require at a time convenient to yourself, which enables you to spend a full evening

outdoors. If they cannot accommodate you or recommend you elsewhere, enquiries should be made at restaurants who can generally put you on the track of suitable "digs."

Our tour included accommodation at twelve commercial or temperance hotels, two inns, two restaurants, and the remainder at private houses. The charges varied from 30s. for two rooms, dinner, supper (light) and breakfast at the Woolpack, Doncaster, to 12s. 6d for one room, tea, supper, breakfast and lunch at a comfortable and spotless little cottage in Grantown, Scotland.

In 1920 we did a month's tour, and covered 14 hundred miles at approximately the same cost.

With one exception we were able to obtain suitable accommodation first shot. Accommodation is a bogey to many would be tourists, and I consider all motor cyclists throughout the country would do well by banding themselves together, forming a touring club and publishing a book which gives all the towns in the United Kingdom and addresses of hotels, restaurants, or private houses at which suitable and moderate accommodation could be obtained; a book of this nature should not cost more than a 1s., and would be almost invaluable to the tourist.

"EXPERIENCED."

Sir,—My wife and I had a fifteen-days' holiday tour with a 550 c.c. Triumph and sidecar at Whitsuntide, covering nearly 1,000 miles—from Yorkshire, through Somerset, Devon, Cornwall, Dorset, etc.—at an inclusive cost of £17—excepting wear and tear of machine, but counting petrol, oil, and slight repairs on the journey.

Our plan was to use hotels for bed and breakfast only, and these charges for the fourteen nights averaged 13s. 2d. per night. They varied considerably—from 24s. to 9s. for the two of us. The cost for two nights at Bournemouth was exceptional—being less than one average night, owing to special circumstances.

The hotels chosen were the smaller ones given in the "Michelin Guide" or one recommended by a local policeman, and all proved satisfactory so far as comfort and breakfast were concerned. On the two occasions when we stayed two nights we were fortunate in finding suitable boarding-house accommodation, and this slightly reduced the average cost.

We are easily satisfied with regard to meals. *En route* we purchased sandwiches, "Cornish pasty," cakes, fruit, etc., and enjoyed a midday lunch on the roadside, often followed by a nap (the weather was ideal); and the cafés or confectioners easily supplied our wants for teas.

Bradford. W. B.

Sir,—Your correspondent, Mr. A. S King, evidently makes the mistake of putting up in large towns. My practice has always been to make for the small country inns. In these one generally gets quite as well fed and looked after, and at a very much smaller cost. I have lately been touring with my wife and two small children and have found the cost for light supper, bed, and breakfast to be in the neighbourhood of 13s. for the whole crowd.

To take a concrete example, I have just put up at the "Golden Heart," about 2 miles east of Birdlip—a delightful old-fashioned inn in gorgeous surroundings, where we got plenty of wholesome country fare (home-cured bacon, new-laid eggs, home-made butter, etc.), and the bill for supper, bed, and breakfast only 13s. Our other meals we always take picnic fashion with the aid of a Primus stove.

London, S.W.11. XF 3039.

Sir,—I am very much surprised to read the figures quoted by Mr. King, and if he should care to communicate with me I think it quite possible that I can give him details which will enable him to tour successfully at a far smaller figure than £3 per day.

He gives no indication in his letter of the area which he covers, but I may tell you that our running by motor cycle and sidecar varies from 400 miles per week to as much as 700, and we run to schedule and keep an accurate account of all costs incurred—hotels, running expenses, tolls, and the like; such a figure as quoted by Mr. King is certainly not borne out in our own professional experience.

ROMAINE.

Liverpool. R. Bassett-Bullock, Director.

INFLUENCE MACHINES FOR I.C. ENGINES.

Sir,—In connection with the application of a small Wimshurst (a 3in. plate specimen can give ½in. spark!) plus condensers (Leyden jar or otherwise) to a motor cycle, it really looks as though *not one* has seriously rigged up some device (even with the machine on the stand) to test the efficacy. Are we waiting for the Germans to do the pioneering work?

I did not quite grasp the method of timing the spark to the engine in the suggestion given a few weeks ago. Wouldn't it be practicable to keep a condenser well charged by the machine and to lead the inner and outer coatings of the condenser to a very simple make and break, with advance and retard facilities (similar, I suppose, to the device on those truly ponderous magnetos of ours)? The Wimshurst would simply run all the time at a sufficient speed to keep the condenser well charged—and we all know that doesn't take much doing!

Can't some engineer rig up the necessary make and break device and run his machine on the stand (with connected Wimshurst tuned by a helper) and tell us how it turns out? One might reasonably expect—

(1) Better explosions with such a strong spark.

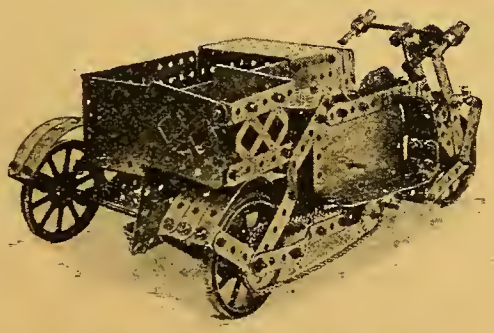
(2) Greater speed, if all goes well.

I, for one, would be only too pleased to lend my powerful little Wimshurst for any such purpose.

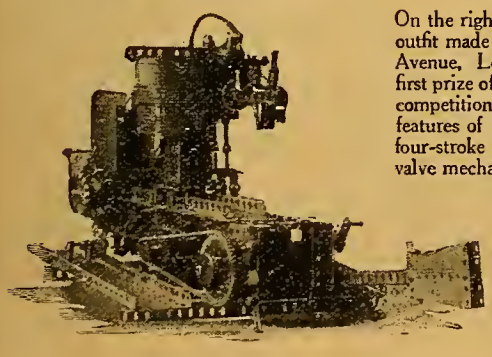
NON-ENGINEER.

Reading.

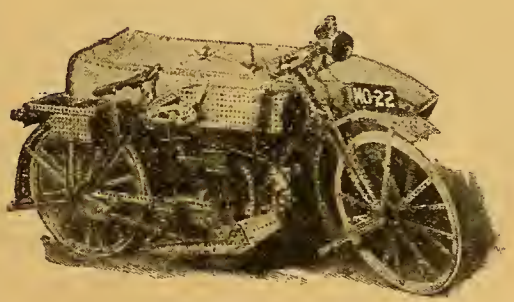
MECCANO ENGINEERING.



A clever little model made by a small Bristol boy. This miniature outfit is fitted with chain drive and clockwork mechanism.



On the right is shown a model sidecar outfit made by E. Wright, 1, Belgrave Avenue, Leicester, who shared the first prize of £20 in the recent Meccano competition. It possesses all the features of a modern outfit, having a four-stroke engine (shown on left), valve mechanism, contact breaker and cam, two speed gear box, clutch kick-starter, chain drive, pump and drip lubricator, and is driven by two electric motors. The model is half-size the wheels being 14 in. in diameter.



INCONSIDERATE MOTOR COACH PASSENGERS.

Sir,—Recently I was driving to Stratford-on-Avon with a passenger in the sidecar. We must have been travelling at about 30 m.p.h. and coming towards us was a bright red motor coach. Just as we passed I saw something flash across me, heard a loud bang, and saw my passenger duck her head quickly.

What had happened was that one of the "gentlemen" in the coach had thrown a tin overboard, which hit the windscreen on the inside and then bounced back out of the sidecar, narrowly missing my passenger's face.

I suppose we all get used in time to matches and cigarette ends being thrown out of motor coaches at random, but I think the limit is reached when it comes to tins. Perhaps, in the near future, we may have to dodge the empty beer bottle as we drive along! *Qui vivra, verra.*

W. LAWRENCE REID.

HAMPERING GOGGLES.

Sir,—I am of the opinion that eyes and ears must work in conjunction with each other.

On many occasions I have been travelling along at about 20 m.p.h. with my goggles (Triplex mask) in place, and on removing them the engine note seems to have become more lively. The roads on each occasion have been dead straight, etc. Experiences and opinions of other riders would interest.

London, S.E.23. OMEGA 3.

Sir,—A friend of mine and myself agree entirely with "Sutton Bank" on the matter of goggles.

The sensation is worst in that type which has separate glasses. We think your correspondent will find it a great improvement to wear the one-piece celluloid pattern, as this allows a far greater field of vision. It seems to be the reduction of the field of vision which destroys one's self-confidence in a tight corner. SCO'.

Cambridge.

WAR ASSOCIATIONS OF A BELGIAN RACE.

Sir,—With reference to your remarks regarding the Grand Prix course, I marched through Franchorchamps into Malmedy in November, 1918, on my way to the Rhine.

I was greatly interested in a map of the course, published last year, as it brought back very vividly that memorable and interesting march.

ARTHUR HIGGOTT.

HANDLEBAR WATCH DIFFICULTIES.

Sir,—If Mr. Awburn's handlebar watch is mounted similarly to mine, there is an easy way out of his difficulty.

In mine, the mounting is also of the so-called "thief-proof" type, the means of attachment being inside, and the method of opening not really obvious.

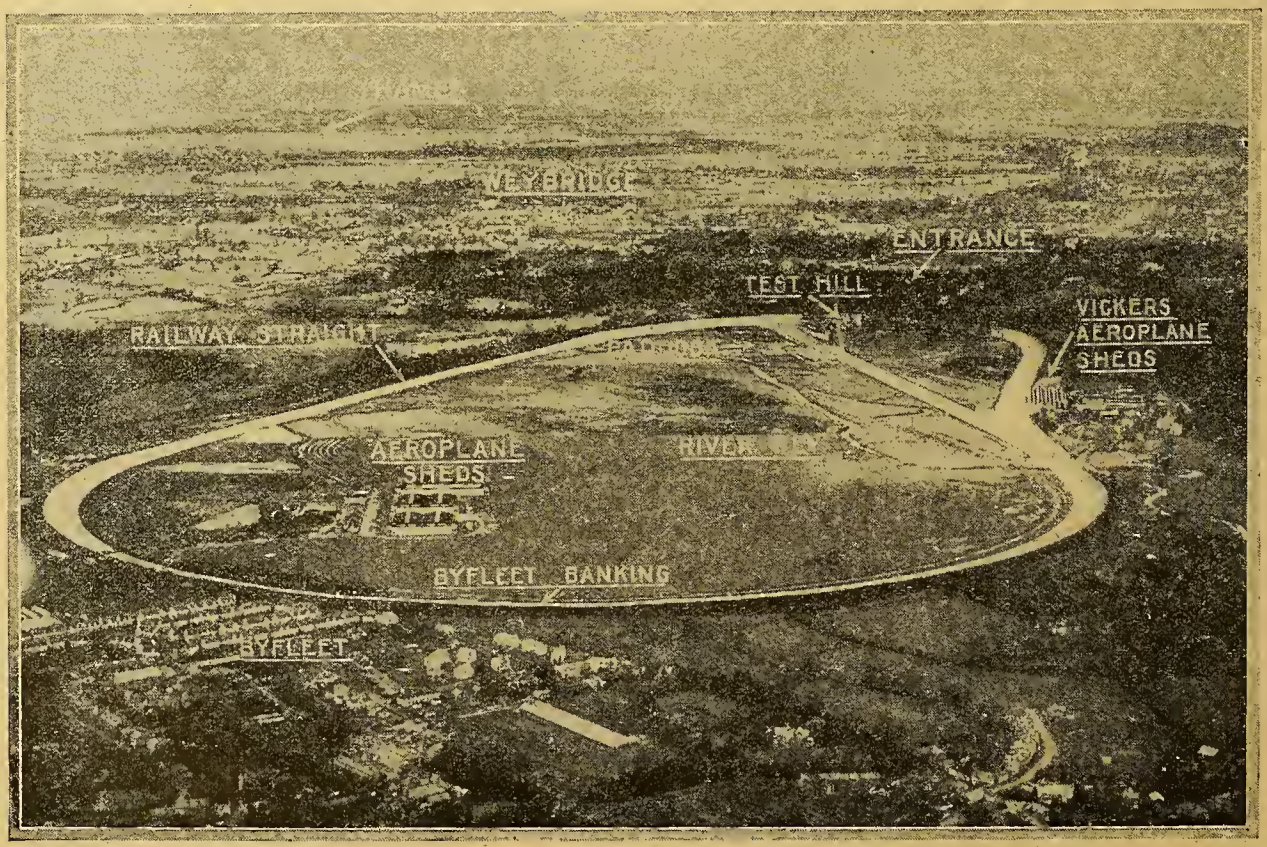
To enable adjustment to suit handlebars of different shapes, the back attachment has a swivel movement. This does not need to be immovably tightened up, and if left so as to be movable by hand, allows of a brisk back and forth rotational motion, which is sufficient to start the watch. I invariably use this method when my watch runs down, and find it quite convenient. T. S. BENTLEY.

"IXION'S" REMINISCENCES.

Sir,—May I express through the medium of this letter my great appreciation of our old friend "Ixion's" "Motor-cycle Reminiscences"? I consider this book great.

In these days of super-efficient engines and speed gears and general reliability, few realise the trials and tribulations of the pioneers. It is to the fortitude of these men that the sport has "made good." The most wonderful thing about these early machines is that they went. I'm afraid if some 1922 super-knuts and alleged speedmen were given 1905 "3½ singles" they would be found rather lacking. Those were machines for sportsmen and *drivers*, not lever manipulators.

London, N.17. DELIGHTED.



BROOKLANDS FROM THE AIR. A striking photograph of the great racing track, showing the various points of interest, familiar, by name, anyhow, to all followers of the motor cycle movement.

GEAR CHANGING PROCEDURE.

Sir,—I think "Triumph-4h.p." is hardly correct re gear changing. The exhaust lifter method is certainly neater and simpler from the operation point of view, but leaves much to be desired with regard to the "innards" of the gear box and sweetness whilst changing. Certainly for changing up, though not so good as the clutch method, it is passable; but to change down by means of the exhaust valve lifter is rank bad practice, as it is necessary that the speed of the driving "dogs" (engine) be increased to the speed of the lower ratio, or driven "dogs." As for clutch wear, the modern article will stand a great deal of ill-use.

Birmingham. "JAMES-3½h.p."

SOLDERING BOWDEN NIPPLES.

Sir,—Regarding the letter from the Bowden Wire Co., I can only say that I have seen large numbers of broken control wires and over 90 per cent. were broken near the nipple. The lever imposes a bending strain as well as a pulling strain, and the heat of soldering having softened the wire adjacent to the nipple is the cause of its breaking at this point.

It would be interesting to have the experience of other motor cyclists in this matter. A. E. BOTTOMLEY.

ALL IN PIECES.

Sir,—With reference to "Trusty Triumph's" experience with regard to his 1909 Triumph, which he states carried him 100 miles with broken gudgeon pin, piston rings, etc., I should like to mention a similar occurrence which happened to me last season on a 1913 clutch model Triumph.

Owing to my friend's machine having broken down at Colwyn Bay, N. Wales, we decided to finish our journey to Birmingham (119 miles) "two up" on the machine mentioned above; an average of 30 m.p.h. was attained, but the nearer to Birmingham we got the noisier the engine became; nevertheless it did its work unfalteringly, notwithstanding two hours' deluge of rain. On taking down the engine on the following day I discovered that the crank case splash platform had broken away, which in turn had smashed the "skirting" of the piston to pieces to within 1 in. of the gudgeon pin; the latter had come loose and scored the cylinder $\frac{5}{1000}$th in., the big end bush had fallen to pieces and dropped out of the connecting rod (no doubt due to some broken fragments having got into the bush), and on the top of everything the near spindle had seized and had been turning round with the nuts in the frame and had nearly worn the latter through!

Four weeks afterwards the same machine obtained two awards (a first and second) in the annual Levis Trial, the necessary repairs, reboring, new piston, etc., having been very efficiently carried out by H. Collins, of Shirley, near Birmingham.

I think as regards faithfulness of an old 'bus this case needs some beating; *and it is absolutely without exaggeration.* Usual disclaimer. "DIGGER."

London, S.W.1.

TEMPERAMENTAL ENGINES.

Sir,—My old Triumph on at least two occasions took hills and levels with wonderful stride, but my present mount—a belt-driven Norton—does the trick almost regularly, in the dusk of a dewy evening.

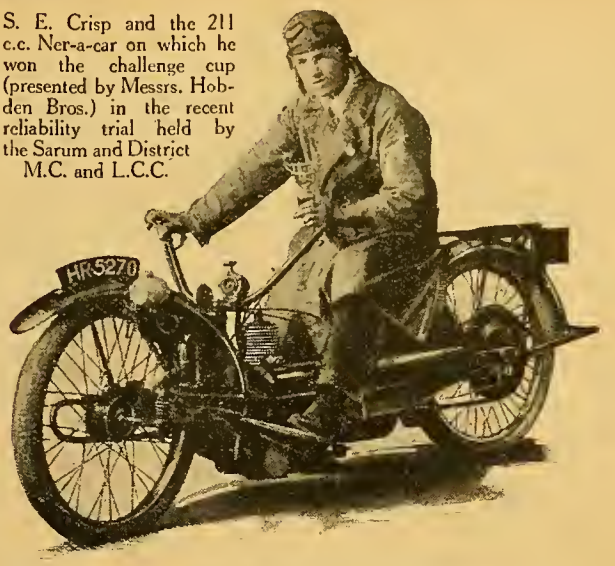
Does not this latter fact seem to indicate some particular condition of atmospheric pressure two or three feet above the ground, or, at any rate, at the same height as the carburetter?

In connection with this, one wonders whether carburetters with air intake facing the front give better results, or otherwise, than those with intake facing backward.

Reading. ENQUIRER.

AVERAGE SPEEDS OF SOLO MOUNTS.

Sir,—In regard to a letter from Mr. N. Williams on the probable performance of a 348 c.c. Douglas, at Whitsuntide I rode a machine of this type from Tunbridge Wells to Dover in 1¼ hours. According to the Bonniksen mileage indicator of a friend who accompanied me on an I.O.M.



S. E. Crisp and the 211 c.c. Ner-a-car on which he won the challenge cup (presented by Messrs. Hobden Bros.) in the recent reliability trial held by the Sarum and District M.C. and L.C.C.

Rudge, the distance is as near 50 miles as makes no odds. This is an average of 40 m.p.h. I was mostly all out on the straight-away, but took absolutely no risks on corners. In the evening of the same day I did the 75 miles from Broadstairs through Canterbury, Detling, Maidstone, to Bexley Heath in 1 minute over 2 hours, an average of approximately 37 m.p.h.

The machine was a 2-speed 1919 model, with standard cam, alloy pistons of two-thirds standard weight but of standard compression ratio, aluminium radiator caps over exhaust valves, and an 18 T. sprocket. Maximum speed on level about 55 m.p.h., all on.

I attribute the average to the *splendid cooling properties of the pistons and caps* and not to any great increase in maximum speed. L. W. E. HARTLEY.

DEFINING FREAK HILLS.

Sir,—I feel that I must take exception to your report of the Bristol and Bath inter-club trial, in which your correspondent terms Dundry, Ubley, and Burledge Hills "freak" hills, in the order named. The trials committee of the Western Centre A.C.U. included these gradients in the Arctic Trial of April 1st, and it is unanimously considered by this committee that in no way can these hills be termed freaks.

Neither the Bath nor Bristol Clubs participated in the "Arctic." J. A. NEWMAN,
Trials Secretary and Treasurer,
A.C.U., Western Centre.

Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle.*

"MOTOR CYCLES AND HOW TO MANAGE THEM."
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."
Eighth Edition. Price net, 2/-. By post, 2/3.

"MOTOR CYCLE REMINISCENCES."

Paper Boards. Price, 2/6. By post, 2/9.

THE MOTOR CYCLE" ROAD MAPS.
Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

CURRENT CHAT

Time to Light Lamps

August 5th	.. ..	9.11 p.m.
„ 7th	.. ..	9.8 „
„ 9th	.. ..	9.4 „
„ 10th	.. ..	9.2 „

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

More American Supremacy !

"This issue is a humdinger, don't you think?" asks an American contemporary in very big type. One can only weakly confess that probably it is.

Growing Petrol Imports.

Double the amount of motor spirit was imported during last month compared with June, 1921.

2,550 m.p.h.

According to *The Times*, which does not often err, a Leyland car at Brooklands covered 8½ miles in 12 seconds—"101¼ m.p.h." A reader asks if this should not be 2,550 m.p.h.

The Dregs of Victory.

British manufacturers really must exercise more discretion in entering for Continental events. Several of *The Motor Cycle* staff wear an extremely grey look since hearing of English successes in the "first Gran Criterium Internazionale delle Prealpe Varesine."

Rubber Roads.

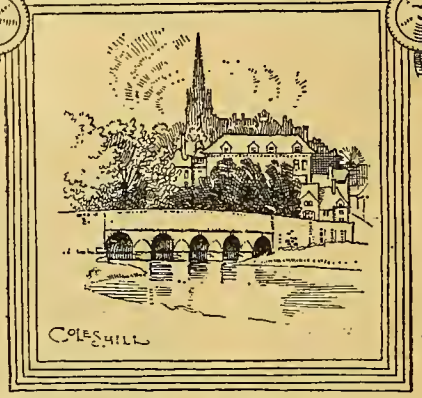
Some time ago the Ceylon Public Works Department used heavy blocks of scrap rubber to pave a bridge in the Chilaw district. The Director of Public Works now reports that the rubber blocks have stood heat and wear and tear very well, and the department intends to make further experiments of the same nature in the near future.

Echoes of the Belgian Grand Prix.

Since the report of the Belgian Grand Prix appeared in our last issue we have received confirmation of the results, some of which were delayed in transit. Stohbart (Saroléa) finished fourth in the 500 c.c. class, while Kieken (Gillet) was second in the 350 c.c. class. In the 250 c.c. class the time of Vermander (Griffon) was 4h. 32m. 35s., while the time of Woods (O.K. Junior), who finished fourth, was 5h. 16m. 25s.

International Six Days Arrangements.

No less than 600 marshals will be employed at the International Six Days Trials, starting to-day from Geneva. On August 9th the speed hill-climb will be organised on the road from Bruch to Fribourg, and there will be a kilometre speed trial on the race track at Laconnex. Numerous prizes have been given by the town of Geneva and the States of Geneva, Berne, and Fribourg.



The Sincerest Form of Flattery.

Feeling that there is a market in America for a real lightweight is proved by the reintroduction of a 225 c.c. two-stroke—extremely like a famous Coventry make of the same capacity—by one of the well-known big-twin firms over there.

As Others See Us.

Nobody will be more amused than Hubert Hassell himself at a French paper's description of the Norton rider losing first place in the Belgian Grand Prix "with rage in his heart."

Not Open, But Nearly So.

The ambitious claim is made by its sponsors that the Western Centre's hill-climb, to be held on the 17th inst. at Chatcombe, is a combination of two open climbs held during 1921. Although not "open" this year it is unlikely to suffer much by the fact, for almost all the well-known riders belong to one of the Western Centre clubs. Particulars may be obtained from Mr. F. R. Ware, St. Sidwells, Tuffley Avenue, Gloucester.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday 4d.

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Special Features

A WEEK IN THE HIGH ALPS.
WHAT HAPPENS IN THE CYLINDER.

Wireless on a Club Tour.

On a recent club tour of Cornwall and Devon the Marlow and District M.C.C. carried a portable wireless set.

Silencers for Power?

The latest subject for controversy is the efficiency (or lack of it) of the "drain-pipe" exhaust. What a disillusionment for speed-merchants if someone proves that the straight-through pipe actually diminishes the engine's power!

What is it?

A weird three-wheeler has recently been noticed on main roads near London; it has front wheel driving and steering, and is propelled by a single cylinder engine mounted over the front wheel. When last seen, the machine was being piloted by one of the fair sex.

Juggernauts.

At the present time, in many parts of the country, travelling shows towed by enormous smoke-belching traction engines are encountered. These monsters completely block narrow country roads, and shower soot and cinders upon the motor cyclist who has the misfortune to be hemmed in behind them.

Modern Reliability.

"Every day we are getting better and better." The famous formula of Dr. Coué might well be applied to the efficiency of the modern motor cycle. A few years ago breakdowns were the order of the day; now one can ride daily for weeks on end without encountering a stranded rider. We have not reached the Millennium, however, so manufacturers have no excuse for resting on their laurels.

Dangerous Tramlines.

Many roads traversed by tramlines are in a deplorable condition, and the London Road between Twickenham and Brentford is no exception to the rule. In places the road has subsided, leaving the tramlines projecting some distance above the wood blocks. These projections are high enough to cause pronounced skidding in the case of solo machines, while it is quite evident that the sharp metal can do considerable damage to tyres.

Police Activity.

Motor cyclists passing through Richmond (Surrey) should be prepared for police curiosity regarding silencing arrangements, especially in the neighbourhood of the Hill and Park, where a number of riders have been pulled up and subsequently fined. We may add, however, that the offenders appear to have been, in most cases, members of a local fraternity which has been causing considerable annoyance to residents for some time past.

Sidecar Taxi in Bristol.

The first licence for a sidecar taxi for public service in Bristol has been granted. It is a standard twin B.S.A. outfit, and appears to be doing good business.

Novel Handicapping Procedure.

Entrants for the Public Schools M.C.C. Handicap at Brooklands, on the 12th inst., were invited to attend in person the handicapping meeting last Tuesday.

Specialises on Silence.

Professor Low, a well-known figure in motor cycle circles, is being considerably "ragged" about his new *rôle* of "Silencer of Undergrounnd Railways."

Successful British Big Twin.

George Brough and the Brough Superior are beginning to be factors to be reckoned with at Brooklands. On Saturday he won his race at over 85 m.p.h.

A Note of Gratitude.

On behalf of the East End children who were taken out by sidecar and car recently for a day in the country at Harpenden is sent "a very hearty 'Thank you' to all those who helped to give such a glorious, never-to-be-forgotten day."

A New Hill.

In the Bristol Club's 12 hour event of August 26th there is to be included a hill of unusual severity which has never before been used in a trial; it is understood to be in the Stroud district, but its identity is to be kept quiet for the present.

Brevity.

A certain London daily paper believes in abbreviation in small ads. thus :—

"Douglas comb., smart gen. turnout, replete every acces., inc. e. lt. sp. discs, etc., taxed, £— cash."

"8h.p. Blackburne comb., eqpd. lps. hrn. scrn. tools, etc., only run 400 mls. Montgoms scr. scrn. lugg. box, good ord."

Considerate.

In many of her main streets St. Louis (U.S.A.) has adopted what is termed "The White Line of Safety," consisting of white bands painted on the roadway about 4ft. from the curb. Cars and motor cycles will not be allowed to encroach within the border. This idea is solely for the safety of cyclists.

Coventry Club's Cricket Match.

In sending us the results of a cricket match in which the Coventry and Warwickshire Motor Club took part, wherein appears: "W. W. Brandish . . . bowled Till . . . 0," the secretary remarks that Brandish, who was second in the Senior T.T., does not appear to play cricket as well as he can ride!

Will they bring back the Cup?

Ten years ago the British Motor Cycle Manufacturers Union put up a cup for international competition in reliability trials. The first year the British team won; in the next event Switzerland secured the trophy, and has held it ever since. The 1922 International Trial started to-day from Geneva, and a strong British team is competing with the hope of bringing back the cup.

Silencer Warning in Middlesbrough.

Motor cyclists should exercise special care in Middlesbrough, warns the A.A., and in particular assure themselves that the silencing devices on their machines are efficient.

Amateur Motor Cyclist at the Wheel.

Although not successful in the motor cycle events at Brooklands on Saturday, R. M. Knowles, the well-known amateur Norton rider, scored a useful win on his 30-98 h.p. Vauxhall car at over 73 m.p.h.

Riders Nominated for Six Days Trials.

F. C. Parkes, M. Bishop, and J. Johnson have been nominated as the three riders of the Sun motor cycles in the A.C.U. Six Days' Trials.

A New Record.

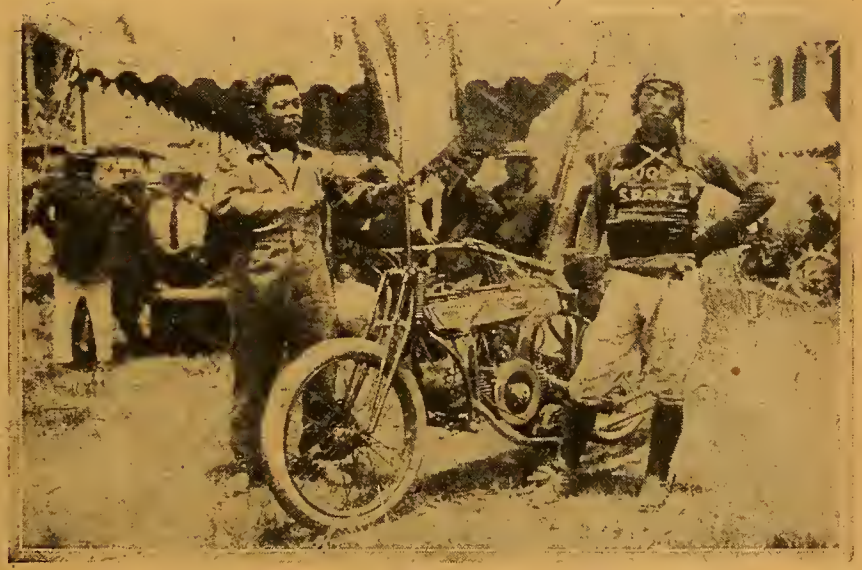
Victor Horsman was recently responsible for setting up a new flying mile record in the 600 c.c. sidecar class, covering the distance on a Norton and sidecar in 4m. 24.8s., equivalent to a speed of 67.97 m.p.h.

An Old-established Reliability Run.

One of the oldest of provincial long-distance club runs, the Bradford-London-Bradford trial of the Bradford M.C. and L.C.C., took place on July 29th and 30th, the Leeds, Hull, Wakefield and Dewsbury clubs also participating. Eighty of the 100 entrants started, amongst them being four ladies, two driving P. and M. and two Scott sidecars; of these three finished. Very few failed to complete the journey, which followed the main road. Much congestion occurred at Muskham, near Newark, where the old wooden bridge is being replaced.

Route of the "Six Days."

Probably the most difficult route of the whole of the Six Days Trials (August 21st to 26th) occurs on the first morning. Starting from York the direction is northerly into the Hambleton Hills, including Rosedale Abbey Bank. In the afternoon of that day industrial districts will be largely traversed, Burton-on-Trent being the objective. On the following days Shrewsbury, North Wales (Bwlch-y-groes and the Hirnaut Pass) and Central Wales, the Wye Valley, and the hilly Stroud district are traversed, finishing at Brooklands on the Friday, after sampling the Chiltern Hills (Alms Hill, etc.). On the last day the speed tests will be carried out at Brooklands.



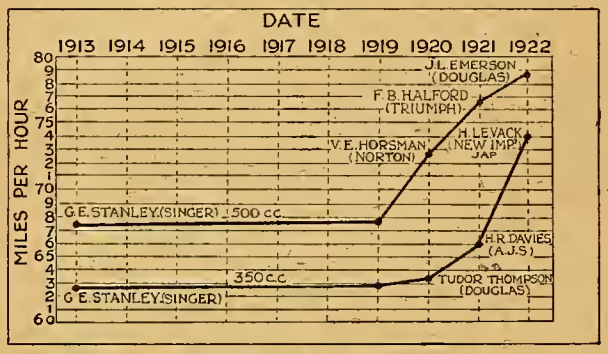
"Championship" meetings are now the vogue in Japan, the enthusiasm shown at the races being quite remarkable. The rider on the right won the Naruo championship on a 494 c.c. Douglas.

THE RISE OF THE 350 c.c. ENGINE.

New Class B Hour Record Figures.

ONE of the outstanding features of the motor cycle movement since the war has been the rapid rise of the 350 c.c. engine. The outcome of the Junior Tourist Trophy races, the present-day engine of this size is challenging the position held by the 500 c.c. type

In the 1921 T.T. a Junior machine won the Senior race. In 1920 the Junior winner was 11.05 m.p.h. slower than the Senior, while in this year's races the Senior event was won at a speed only 3.58 m.p.h. in excess of the smaller machine. Now a motor cycle fitted with a 350 c.c. o.h.v.



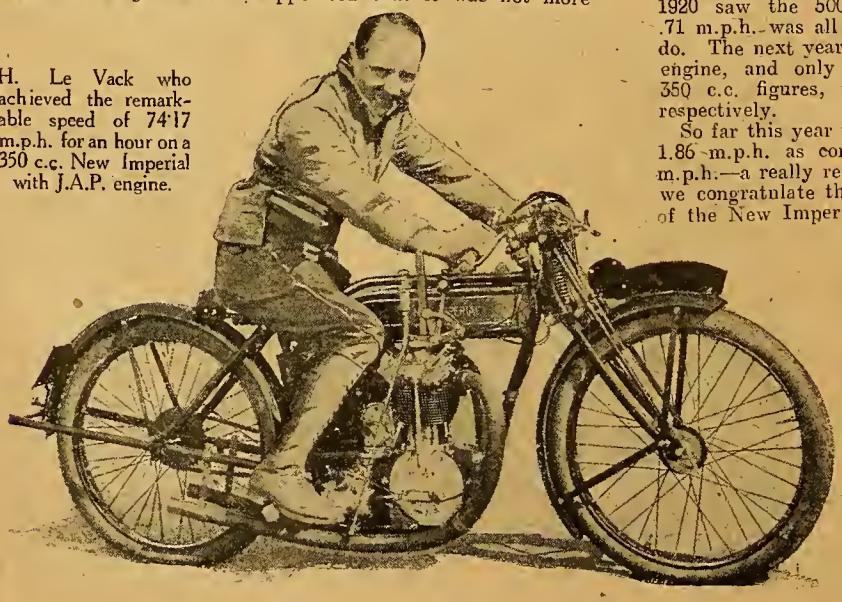
Graph illustrating the advances in speed year by year of 500 c.c. and 350 c.c. hour records.

J.A.P. engine has maintained the remarkable speed of over 74 m.p.h. for an hour. The following are H. Le Vack's records secured at Brooklands a few days ago on a New Imperial:—

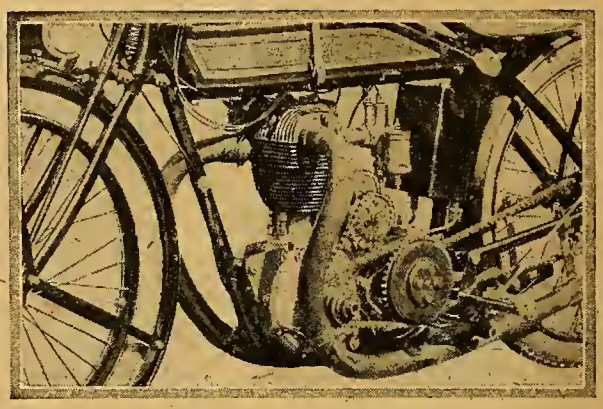
10 miles	...	73.52 m.p.h.
50 miles	...	74 ,,
100 miles	...	72.81 ,,
1 hour	...	74 miles 291 yards=74.17 m.p.h.

Less than two years ago the 500 c.c. hour record stood at 72.4. Le Vack exceeded this speed for a hundred miles and included a stop for full replenishment.

Ever since we first inspected the o.h.v. J.A.P. engine in May last, we have expected big things from it, and we confess we were somewhat disappointed that it was not more



H. Le Vack who achieved the remarkable speed of 74·17 m.p.h. for an hour on a 350 c.c. New Imperial with J.A.P. engine.



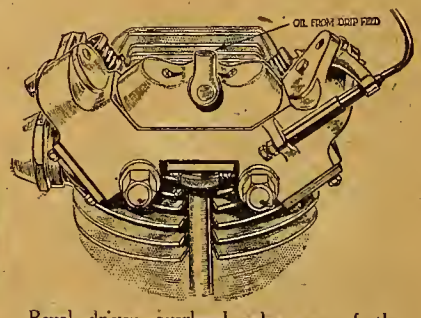
Neatness of design characterises the 350 c.c. o.h.v. J.A.P. engine which occupies very little more space in the frame than a side-by-side valve engine.

fortunate in the Tourist Trophy races, but both in the Junior and the Senior events the machine suffered troubles which we understand were not connected with the engine itself—a gear box in the one race and a magneto platform in the other. These defects—if defects they were—have evidently been rectified, for no trouble was experienced by Le Vack during his 100-mile run at Brooklands. That Le Vack's hour record of 74.17 m.p.h. is remarkable is best appreciated when compared with previous figures and those of Class C (up to 500 c.c.). These are shown graphically in the preceding column, from which it will be seen that while the post-war figures of the 500 c.c. class show a more or less steady improvement, Le Vack's record has given the 350 c.c. figures a rise of no less than 8 m.p.h.—raising the speed from 66.09 m.p.h. to 74.17 m.p.h., a "jump" which is probably unique in the history of record breaking. The following figures show the steps in the speed ladder of the two classes:—

	500 c.c.	350 c.c.
From 1912 to 1920	=5.04 m.p.h.	.71 m.p.h.
1920 to 1921	=4.26 m.p.h.	2.70 m.p.h.
1921 to 1922	=1.86 m.p.h.	8.08 m.p.h.
Total ...	11.16 m.p.h.	11.49 m.p.h.

It will be seen that the increase of speed since the war has been greater in the case of the 350 c.c. than in the 500 c.c. class, but only Le Vack's record has made this so. 1920 saw the 500 c.c. type advance 5.04 m.p.h., while .71 m.p.h. was all the extra speed the 350 c.c. engine could do. The next year gave a further 4.26 m.p.h. to the 500 c.c. engine, and only another 2.70 m.p.h. was added to the 350 c.c. figures, totals of 9.30 m.p.h. and 3.41 m.p.h. respectively.

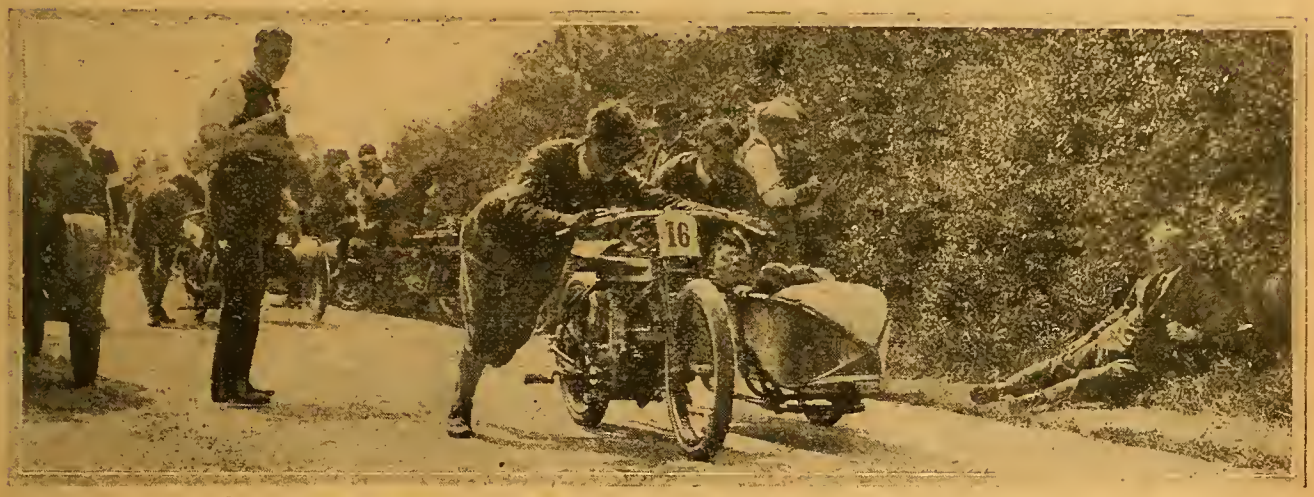
So far this year the Class C hour record has only advanced 1.86 m.p.h. as compared with Le Vack's "jump" of 8.08 m.p.h.—a really remarkable performance and one upon which we congratulate the rider, the J.A.P. firm, and the makers of the New Imperial.



Bevel driven overhead valve gear of the record breaking 350 c.c. J.A.P. engine. Observe the neat exhaust lifter arrangement.

OVER THE "100" MARK.

Consistently High Speeds attained at the East Midland Centre A.C.U. Clipstone Drive Speed Trials.



F. T. Hatton (748 c.c. Douglas sidecar) starting in the 750 c.c. sidecar class at Clipstone Drive.

FAVOURED by the good surface, the slight downward grade, and a fairly strong breeze which freshened steadily throughout the day, the hundred and twenty odd contestants in the East Midland Centre Speed Trials on Saturday achieved speeds no less astonishing to themselves than to the spectators.

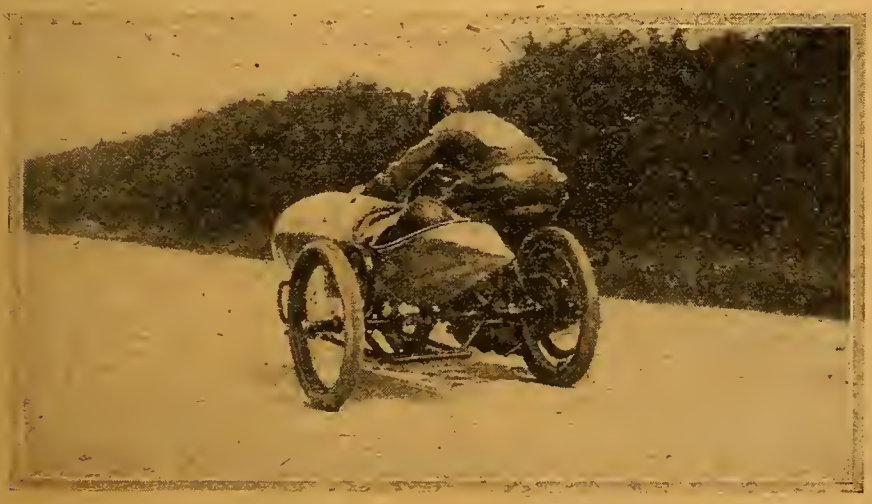
Clipstone Drive, a hard concrete-like metalled roadway through the derelict camp of the same name near Mansfield, is fairly satisfactory from all points of view other than in its provision of vantage points for spectators.

Fine Speedway Lacking a Grand Stand.

Over the measured half-mile, with ample flying start and pulling up distance, the road curves so slightly as to be scarcely noticeable, and the surface is practically free from waves or bumps. Unfortunately the road is narrow, and in consequence, with spectators concentrated on the one side alone available for them, and there being no elevated banking for their accommodation, there is a tendency for the width of the track to be still further reduced by craning sightseers who will not keep back.

Be that as it may, however, the riders hurtled unerringly down the narrow space and into what to them must have been a veritable bottle-neck by the finishing line, where the timekeeper's tent was faced by a long row of "orchestra stalls," otherwise the caterer's chairs, in which the public courted disaster at the comparatively low price of sixpence each.

Sidecar classes were run off first in the afternoon, and of these there were only three, with capacity limits up to 550 c.c., 750 c.c., and unlimited c.c. respectively.



Second fastest time of the day was made by I. P. Riddoch (998 c.c. o.h.v. Zenith-Blackburne). His speeds were: solo, 101·12 m.p.h., and sidecar, 87·38 m.p.h.

In the first two classes Searle and Padley, the Sheffield-Henderson exponents, distinguished themselves; but in the unlimited section the main duel was between I. Riddoch (998 Zenith-Blackburne sc.) and F. W. Dixon (989 Harley-D. sc.). The latter was the victor, his four-valve o.h.v. engine having a pistol-like exhaust and tremendous speed.

Sidecars at 90 m.p.h.

Dixon covered the half-mile in 20 secs., or 90 m.p.h., but this was to be marvellously outshone in the solo classes later.

Next came the East Midland Centre championship classes, competed for in teams of three (two solo and one sidecar). In this event occurred the only untoward incident of the day—H. Harvey (499 Triumph) getting into a bad wobble and having his front tyre come off (which caused which is difficult to say) near the finishing line. Fortunately missing the crowd, the rider was little hurt, but the machine suffered rather badly.

Out of teams representing Derby, Leicester, Loughborough, Nottingham, and Mansfield, the latter proved victorious.

Solo Classes.

So far the event had scarcely got into its stride, but now came the solo classes, each being divided into three sections, "A" for amateurs and previous non-winners of open first prizes, "B" for "non-expert" trade riders, "C" for experts.

Two classes for two-strokes provided an opportunity for Alec. Bowerman, a 15-year-old rider of a Velocette, to show his pace, and it proved that only the best Scotts could beat him; amongst riders of machines similar to his own he was invincible, and attained 69.77 m.p.h.

In the bigger solo classes the unwieldiness of the entry (there were 76 entrants in the 550 c.c., and 66 in the 750 c.c. categories) made detailed reporting impossible, and the winners' times must speak for themselves.

For the high speeds attained the course was all too narrow. High hedges and lack of raised banking confined the many thousands of spectators to the track. The rider approaching the finishing line (at 77¼ m.p.h.) is L. Padley (349 c.c. Sheffield-Henderson.)

A Chance for the Crocks.

Between these two classes was a most interesting one for machines of 1914 and earlier vintage and any capacity. These included B. Fellowes' ancient Minerva, a water-cooled Humber single, and other veterans. The winner, who covered the half-mile in 26s. (69.3 m.p.h.), rode an old Bat-Jap, fitted with two Schebler carburetters and a three-speed hub gear.

Hassall and his Norton appeared meteorically in the 750 c.c. solo class, his time being 20s., but on re-running in the unlimited class something went wrong and he just toured up the course. In the trade section of this class and in the Mansfield Club Championship following came the most thrilling spectacle of the day. Incidentally, there is every assurance that the times were accurate and the distance correctly measured, but the times recorded are certainly extraordinary.

Well over 100 m.p.h.

Riddoch, with his o.h.v. two-carburetter Blackburne-engined Zenith (three-speed), covered the distance in 17⅝s. (101.12 m.p.h.), and everyone waited to learn if Dixon could beat this. If, previously, police and marshals had struggled somewhat vainly to keep back the crowd, thoughts of Dixon's coming were much more effective. The popular favourite failed to make a win, however, and the Mansfield Club Championship, in which he alone of the two was entered, provided the only remaining opportunity in which to vindicate himself.

This he did, the demoniacally-crackling exhaust roaring nearer to the thrilled crowd around the timing tent at 103.45 m.p.h., the half-mile being covered in 17⅖s.

Dixon's ride concluded the meeting, which had progressed without a break in its excellent organisation from 2 p.m. until 7.40. Praise and bouquets should be handed freely to the competitors, the patient officials, and the many thousands of still more patient spectators who stuck to their posts with unwavering faithfulness during the whole proceedings.

Results, in order of class members, are as follows :—

E. MIDLAND CENTRE TEAM CHAMPIONSHIP.

WINNERS: Mansfield and District M.C. and L.C.C
F. Horbury (496 Douglas), 22s.
R. Lucas (348 Sheffield Henderson), 22⅖s
F. Sisson (490 Norton sc.), 26s.

CLASS 1.—TWO-STROKES UP TO 300 C.C.
SECTION A.—4 entrants.
Alec Bowerman (247 Velocette), 25⅘s.
S. Marshall (247 Velocette), 27⅗s.
R. Taylor (211 Levis), 29⅘s.

SECTION B.—6 entrants.
Alec Bowerman (247 Velocette), 25⅘s
H. Jennison (247 Velocette), 26⅘s.
S. Marshall (247 Velocette), 27⅗s.

SECTION C.—2 entrants.
Alec Bowerman (247 Velocette), 25⅘s.
J. Sylvester (247 Velocette), 34⅗s.

CLASS 2.—TWO-STROKES, UNLIMITED
SECTION A.—8 entrants.
E. Freear (532 Scott), 24⅘s.
C. Barnes (481 Scott), 24⅘s.
Alec Bowerman (247 Velocette) } 26⅗s
F. Nash (481 Scott) }

SECTION B.—7 entrants.
A. W. Thrush (481 Scott), 24⅘s.
E. Widdowson (481 Scott), 26⅕s.
Alec Bowerman (247 Velocette) } 26⅗s.
J. Nash (481 Scott) }

SECTION C.—4 entrants.
Alec Bowerman (247 Velocette) } 26⅗s
J. Nash (481 Scott) }
J. R. Sylvester (247 Velocette), 30⅕s.

CLASS 3.—SOLO UP TO 300 C.C.
SECTION A.—4 entrants
A Bowerman (247 Velocette), 26⅗s
S. Marshall (247 Velocette), 27⅗s
J Holdsworth (249 Massey-Arran), 30⅕s

SECTION B.—11 entrants.
A Bowerman (247 Velocette), 26⅗s.
J Heath (249 Coventry Eagle), 26⅘s
M. Jennison (247 Velocette), 27⅕s.

SECTION C.—4 entrants.
J Roberts (249 New Imperial), 29⅕s
J Sylvester (247 Velocette), 33s.

CLASS 4.—SOLO UP TO 350 C.C.
SECTION A.—11 entrants.
W. Aston (349 Diamond B.), 25⅖s.
D. Brown (349 Royal Ruby), 26⅘s.
A Bowerman (249 Velocette), 27⅗s.

SECTION B.—21 entrants.
O. Handley (349 O.K.), 22⅖s.
J. Nichols (349 Mars), 22⅘s.
R. Gray (349 New Scale), 23⅖s.

SECTION C.—7 entrants.
R. Lucas (349 Sheffield-Henderson), 22s.
O. Handley (349 O.K.), 22⅘s.
J. Nichols (349 Mars), 22⅘s.

CLASS 5.—SOLO UP TO 550 C.C.
SECTION A.—21 entrants.
W. Martin (499 Sunbeam), 21⅕s.
P. H. Turnhill (490 Norton), 22⅗s.
A. Thrush (486 Sunbeam), 22⅘s.

SECTION B.—22 entrants.
F. Horberry (496 Douglas), 21⅗s.
A. Bosworth (498 Brough), }
Harold Petty (490 Norton), } 22s.
F. Sisson (490 Norton), }
O. W. Redgate (499 Sheffield-Henderson), } 22⅗s.
J. Wilkinson (490 Norton) }

SECTION C.—11 entrants.
E. Searle (499 Sheffield-Henderson), 20⅖s.
F. T. Hatton (496 Douglas), 21s.
F. Horberry (496 Douglas), 21⅗s.

CLASS 6.—1914 AND EARLIER MACHINES, ANY CAPACITY.
H. Synyer (976 Bat-Jap), 26s.
B. Chatterton (654 Matchless), 27⅕s.
W. White (499 Rudge), 28s.

CLASS 7.—SOLO UP TO 750 C.C.
SECTION A.—31 entrants.
W. Martin (499 Sunbeam), 21⅖s.
R. C. Winn (496 Douglas), 21⅗s.
D. Jones (499 Sunbeam) } 22⅗s.
A. W. Thrush (482 Sunbeam) }

SECTION B.—25 entrants.
J. Richards (688 Coventry Victor), 21⅖s.
H. Petty (490 Norton), 21⅘s.
P. E. Norris (348 Sheffield-Henderson) } 21⅘s.
J. Wilkinson (490 Norton) }

SECTION C.—12 entrants.
H. Hassall (490 Norton), 20s.
F. T. Hatton (748 Douglas), 20⅗s.
E. Searle (499 Sheffield-Henderson), 21s.

CLASS 8.—SOLO, UNLIMITED.
SECTION A.—28 entrants.
W. Martin (499 Sunbeam), 21⅕s.
R. C. Winn (496 Douglas), 21⅗s.
D. Jones (486 Sunbeam), 22⅘s.

SECTION B.—24 entrants.
J. Richards (688 Coventry Victor), 20⅘s.
O. W. Redgate (499 Sheffield-Henderson) }
G. Hartwell (976 Brough Superior) } 21⅗s.
F. Sisson (490 Norton), 21⅘s.

SECTION C.—14 entrants.
I. Riddoch (998 Zenith), 17⅘s.
F. W. Dixon (989 Harley-Davidson), 18⅕s.
E. Searle (499 Sheffield-Henderson), 20⅕s.

CLASS 9.—SIDECARS UP TO 550 C.C.
SECTION A.—7 entrants.
H. M. Barron (490 Norton sc.), 25⅕s.
P. Cheston (490 Norton sc.) 27s.
F. Nash (481 Scott sc.), 29s.

SECTION B.—2 entrants.
S. Lawrence (499 Sunbeam sc.), 28⅗s.

SECTION C.—5 entrants.
L. Padley (348 Sheffield-Henderson sc.), 23⅕s.
E. Searle (499 Sheffield-Henderson sc.), 23⅗s.
S. Lawrence (499 Sunbeam sc.), 29s.

CLASS 10.—SIDECARS UP TO 750 C.C.
SECTION A.—7 entrants.
H. M. Barron (490 Norton sc.), 25⅕s
P. Cheston (490 Norton sc.), } 29⅖s.
F. Nash (481 Scott sc.), }

SECTION B.—3 entrants.
J. Richards (688 Coventry Victor sc.). 24s
F. Sisson (490 Norton sc.), 24⅗s.

SECTION C.—4 entrants.
E. Searle (499 Sheffield-Henderson sc.), 23s.
F. T. Hatton (748 Douglas sc.), 23⅖s.

CLASS 11—SIDECARS AND THREE-WHEELERS, UNLIMITED.
SECTION A.—7 entrants.
H. Barron (490 Norton sc.), 25s.
A. Grocock (976 Zenith sc.), 27s.
P. Cheston (490 Norton sc.), 28⅕s.

SECTION B.—5 entrants.
J. Richards (688 Coventry Victor sc.) }
F. Sissons (490 Norton sc.) } 25s.
G. Hartwell (976 Brough Superior sc.), 25⅗s.

SECTION C.—7 entrants.
F. Dixon (989 Harley-Davidson sc.), 20s.
I. Riddoch (998 Zenith-Blackburne sc.), 20⅗s
R. Stacey (989 Harley-Davidson sc.), 23⅗s.

CLASS 13.—MANSFIELD CLUB CHAMPIONSHIP.
SECTION A.—14 entrants.
R. Flint (490 Norton), 21⅖s.
A. Thrush (486 Sunbeam), 22⅘s.
R. C. Winn (496 Douglas), 23s.

SECTION B.—18 entrants.
*F. W. Dixon (989 Harley-Davidson), 17⅗s
F. T. Hatton (748 Douglas), 20s.
R. Stacey (989 Harley-Davidson), 20⅘s.

*Fastest time of the day (103.45 m.p.h.).

EALING CLUB AT BROOKLANDS.

Ladies' Day on the Track. Poorly Supported Handicaps. British Big Twins' Successes.

A speed impression of J. L. Emerson (499 c.c. Douglas) and A. S. Guthrie (347 c.c. Diamond B. and S.).

BROOKLANDS meetings resemble Ford cars. They are all very much alike, and you may call them by different names without altering them beyond recognition.

Last Saturday's event was run by the Ealing club, but except that the fields were smaller than usual, it might easily have been a B.M.C.R.C. affair; the same people were there, and, generally speaking, the same people won.

Lady's Win.

On the other hand, the afternoon was notable because of a lady competitor's win —Mrs. Janson (249 Trump-Jap) was first in the novices' handicap—and because of a more than usually pronounced atmosphere of gaiety about the proceedings.

Three races held over from the previous M.C.C. event opened the programme, the first a 1,000 c.c. sidecar handicap. It was a battle between three long handicap men, S. E. Longman (988 Zenith-Jap sc.), R. Charlesworth (988 Zenith-Jap sc.), and F. A. Longman (994 Ariel-M.A.G. sc.). The last-mentioned led for two laps, but his namesake gained his 12 seconds penalty in lap three, and Charlesworth retrieved ground lost at the start.

600-1,000 c.c. Sidecar Handicap.
1. S. E. Longman (988 Zenith-Jap sc.), 1m. 3s.
2. R. Charlesworth (988 Zenith-Jap sc.), 1m. 24s.
3. F. A. Longman (994 Ariel-M.A.G. sc.), 1m. 15s.
Winner's speed=66.29 m.p.h.

The M.C.C. Championship came next—a difficult-to-follow five-lap handicap, in which C. F. Taylor (Alecto), the limit man, was well beaten on the last lap by E. W. Spencer (499 Douglas).

M.C.C. Championship for Harry Smith Cup
1. E. W. Spencer (499 Douglas), 3m.
2. C. F. Taylor (345 Alecto), 7m. 45s.
3. H. Le Vack (345 New Imperial), 2m.
Winner's speed = 72.68 m.p.h.

The first of a series of three-lap Ealing events—a 350 c.c. solo handicap—saw two ladies on the starting line, Mrs. Janson (Trump) and Mrs. Knowles (349 A.J.S.). Mrs. Knowles led the field for a lap, but the less generously handicapped men crept up thereafter, and C. G. Pullin (346 Douglas) scored yet another well-earned win.

350 c.c. Solo Handicap.
1. C. G. Pullin (346 Douglas), 9s.
2. A. Fraser (348 Sheffield Henderson), 54s.
3. F. J. Youngs (348 O.K. Junior), 54 sec.
Winner's speed=73.69 m.p.h.

There were only four starters in the 500 c.c. race, and finishing order was also first and second lap order.

500 c.c. Handicap.
1. Lt. R. T. Grogan (490 Norton), 51s.
2. R. M. Knowles (490 Norton), 1m. 25s
3. R. Newitt (496 Douglas), 1m. 15s.
Winner's speed=70.58 m.p.h.

Five big twins, with only 45 seconds separating them all, now provided an excellent tussle. F. A. Longman (Ariel-M.A.G.) got well away from the limit mark and led for just two laps, but Geo. Brough (988 Brough-Superior) was 18 seconds per lap faster, and neither Baldwin's Matchless nor Col. Stewart's Trump-Anzani) were quite able to catch up the machine with the big plated tank.

500-1,000 c.c. Handicap.
1. G. Brough (988 Brough Superior), 18s.
2. O. M. Baldwin (994 Matchless), 9s.
3. R. N. Stewart (994 Trump-Anzani), 15s.
Winner's speed=85.07 m.p.h.

Of the four starters in the novices' handicap, two were ladies; but Mrs. Janson's track experience gave her a decided advantage over Mrs. Knowles, and her greatest danger was from the scratch man, G. H. Ruscoe (348 Ruscoe-Blackburne). He failed, however, by about 250 yards to overtake her; and Mrs. Knowles made a good third.

Novices' Handicap.
1. Mrs. G. Janson (249 Trump-Jap), 1m. 33s.
2. G. H. Ruscoe (348 Ruscoe-Blackburne), scratch.
3. Mrs. O. M. Knowles (349 A.J.S.), 1m. 33s.
Winner's speed=53.70 m.p.h.

Mrs. G. M. Janson (249 c.c. Trump-Jap) and Mrs. O. M. Knowles (349 c.c. A.J.S.) at the start of the 350 c.c. Ealing Handicap.

Ealing Club at Brooklands.—

A rag-time inter-club team race followed; it was won very decisively by a strong team representing the B.M.C.R.C.

There were twelve starters in the three-wheeler event for Professor Low's cup, but the race was very much a procession in starting order. V. Baxter (346 Holroyd sc.) won comfortably, S. E. Longman (988 Zenith-Jap sc.) gained much ground in reaching second place, and L. F. Peaty (348 Hawker sc.) had to go hard to prevent another big twin from being third. W. D. Hawkes on a single-seated Morgan with an eight-valve M.A.G. engine was handicapped out of the picture.

THREE-WHEELER HANDICAP.
1. V. Baxter (346 Holroyd sc.), 3m. 36s.
2. S. E. Longman (988 Zenith-Jap sc.), 1m. 15s.
3. L. F. Peaty (348 Hawker sc.), 2m. 51s.
Winner's speed=50.18 m.p.h.

Down on the programme as an impromptu handicap, the next event attracted a wonderful field, ranging from 30-98 h.p. Vauxhall and 15.9 h.p. Bentley cars down to a solo Harley-Davidson. The handicapping was as comic as the entrants looked on the starting line. C. W. Johnston on the same flat twin Harley-Davidson machine that *The Motor Cycle* "road-tested" at the beginning of the year up to a maximum of 45 m.p.h., won comfortably at 54.31 m.p.h.—which was also rather funny! Evans-Greaves on a Brough-Superior sidecar was second.

In the last race of the day S. E. Longman (988 Zenith-Jap sc.) won the Ealing club championship, after lying second for two laps to V. Baxter (348 Holroyd sc.). The solo riders were dealt hardly with, although Col. Stewart (Trump-Anzani) made an excellent fourth from very near the scratch mark. O. De Lissa (M.A.G. sc.), who was third, was heavily penalised. The winner's speed was 66.65 m.p.h.

SCOTTISH SPEED CHAMPIONSHIPS.

New Imperial, Douglas, Norton, and Harley-Davidson Successes.

SCOTLAND'S big speed event of the year—the Championship Meeting at St. Andrews—was held on Saturday and resulted in several keenly-contested races in which local men and well-known English riders divided the chief honours.

There were many hundreds of spectators, and the weather conditions were favourable. Nearly 300 entries were received.

Interest centred on the championship races. D. B. Calder (248 New Imperial) won the 250 c.c. event with some ease and A. H. Alexander (349 Douglas) was not very hard pressed in the 350 c.c. race, winning by 800 yards or so; his time for the twenty miles was 23m. 25⅘s., an average speed of 51.2 m.p.h. for a ten-lap, twenty-mile course.

No less than thirty competitors lined up for the medium-weight (560 c.c. championship, and by superior cornering, C. P. Wood (532 Scott Squirrel) came home first, only to be disqualified in favour of Graham Walker (490 Norton). Wood's disqualification is said to be due to the length (or shortness) of his exhaust pipe.

There was a regrettable accident owing to D. S. Alexander and D. B. Calder, on Nortons, colliding. Both were seriously injured.

Only ten started in the 1,000 c.c. race, also over the twenty-mile course, and Geo. Grinton (989 Harley-Davidson) won easily from F. A. Hunter (976 Brough Superior) and R. J. Braid (998 Indian), who finished in the order stated. Grinton's speed was 56.8 m.p.h.

Three one-lap races followed. The 350 c.c. class needed two preliminary heats, the final placings being: 1, J. J. Lawcock (348 Sheffield Henderson); 2, C. Norman Sadler (348 Sheffield-Henderson); 3, A. A. Porter (348 New Gerrard). G. W. Walker (490 Norton) scored two further successes in the 560 c.c. and 1,000 c.c. classes.

C. Norman Sadler (348 Sheffield-Henderson), D. Adamson (490 Norton), and J. G. McEwan (490 Norton) were respectively first in the 350 c.c., 560 c.c., and 1,000 c.c. experts barred three-lap races.

Graham Walker (490 Norton sc.) was allowed a walk-over in the 600 c.c. sidecar class, and the only other sidecar race—1,000 c.c.—was won by G. Grinton (989 Harley-Davidson sc.).

For the third year in succession the Edinburgh team won the inter-club race.

AN IRISH CLIMB.

BY reason of the fact that the district in which the event was originally fixed to be held was the scene of a good deal of "Irregular" activity, the Dublin and District Motor Cycle Club was compelled to change the venue of its open hill climbing handicap on Saturday last to the de Sally Quarry Hill, near Tallaght. The success of the event did not suffer because of the change, and good competition was seen in the various classes. The fastest time of the afternoon was made by A. A. Wayte (499 Sunbeam), 45 secs., but the surprise of that class was furnished by J. Healy, who, on a twin 500 c.c. James that he had procured for the postponed Tailteann road race, did a wonderful performance by getting within 1⅘ secs. of the scratch man's time, despite a handicap of nearly four stone extra weight. He was an easy winner of the handicap. R. Humphreys (249 Velocette) won the two-stroke class, tieing with the scratch man's fastest time, and T. V. Murphy (348 Coventry Eagle) proved the winner of the 350 c.c. class. The placings and times of the winners in the four classes were as under:—

250 C.C. (TWO-STROKES).
1. R. Humphreys (249 Velocette), 2s., 58⅕s.
2. T. F. Slevin (249 Velocette), scratch, 60⅕s
3. J. G. Burney (225 Enfield), 5s., 62⅘s.

350 C.C. (FOUR-STROKES).
1. T. V. Murphy (348 Cov. Eagle), 8s., 53s.
2. H. McNally (249 New Imperial), 54⅘s.
3. F. A. Wallen, Jun. (349 A.J.S.), 2s., 55⅕s.

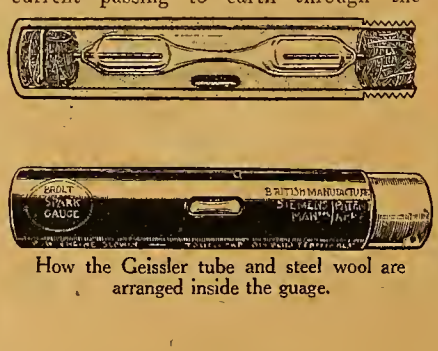
500 AND 600 C.C.
1. J. Healy (500 James), 12s., 34⅘s.
2. A. Carton (490 Norton), 4s., 42⅕s.
3. T. E. Greene (494 Douglas), 5s., 43⅕s.

SIDECAR CLASS.
1. D. Allen (490 Norton sc.), 2s., 63⅕s.
2. C. D. Maguire (976 Matchless sc.), 5s., 65⅘s.
3. E. Ashton (998 Indian sc.), scratch, 66⅘s.

DIAGNOSING IGNITION FAULTS.

IT is a somewhat difficult matter to ascertain the precise condition of a sparking plug without first stopping the engine and then removing the plug; the Brolt Neon spark gauge has been designed to obviate this. Without short-circuiting, it utilises a very small amount of current to produce a luminous discharge of sufficient colour value to demonstrate the exact condition of a sparking plug, the bright red glow being obtained by an electrical discharge through a tube containing a rare gas called Neon.

The device simply consists of a vulcanite cylinder containing a glass Geissler tube packed at either end with steel wool and having a brass cap at one end. It is held in the hand by the insulated end, and the brass cap is placed against the terminal of the sparking plug, when, if the plug is in order, a bright glow is shown through the window provided, the current passing to earth through the body of the motorist without producing any shock.



How the Geissler tube and steel wool are arranged inside the guage.

In its method of operation the appliance resembles a miniature condenser. If the plug is faulty or the points are too close together the potential is immediately reduced, and the tube will flash only feebly or intermittently; if the gap is wide the potential is raised and the flash is lurid in colour.

The gauge may also be usefully employed for testing the continuity of the electrical circuit, and for locating any leakage which may occur in connection with the high tension leads by simply tracing the gauge along the outer covering.

The gauge is obtainable from Brolt Ltd., Rood End Road, Olbury, price 6s.

CLUB NEWS (continued from p. 167)

Rotherham and District M.C.

The annual reliability trial has been arranged to take place on August 20th, when a special prize for lady riders will be offered. Entries for this event close on August 13th.

Weston-super-Mare and District M.C.C.

A 72 mile course including five different hills was selected for a reliability trial held on the 22nd of last month. Silver cups were awarded to E. G. Fersy and A. R. Passey, both driving G.N. light cars. Gold medals were awarded as follows: J. Tucker (293 New Imperial), F. C. King (550 Triumph), G. O. Scampton (499 Dunelt sc.), and F. G. Mann (998 Harley-Davidson sc.).

Dolgelly and District M. and M.C.C.

A successful reliability trial and hill-climb took place on Wednesday of last week, when 14 competitors started and 11 completed the course. Good performances, despite unfavourable weather conditions, were made by the following riders: Mrs. Gillmore (550 Triumph sc.), W. James (269 Metro-Tyler), O. W. Chambers (490 Norton), R. James (557 B.S.A.), and Wynne Williams (698 Raleigh).

Matlock and West Derbyshire M.C.C.

At a meeting held at headquarters, the Darley Bridge Garage, Matlock, on July 22nd, Mr. E. F. Hurt, South Darley, Matlock, was elected hon. general secretary, Mr. G. Davis, Tor House, Matlock, branch secretary for Matlock and district, and Mr. C. Spencer, Post Office, Rowsley, branch secretary for Bakewell and district. It was agreed to affiliate to the East Midland Centre of A.C.U. The opening meet and club run was held on the 29th ult. The club would be glad to hear from secretaries of clubs within a radius of 30 miles with a view to arranging an inter-club rally.

Tiverton M.C. and L.C.C.

The results of the recent gymkhana held on the old race course at Tiverton are as follows:—

RIDING THE GREASY PLANK.—S. Courtney (269 Wolf).

EGG AND SPOON RACE.—1, L. Stagg (499 Sunbeam); 2, S. W. Jordon (292 O.K.).

RIDING BLINDFOLD.—1, W. C. Treloggan (998 Indian); 2, R. Barrington (375 Royal Ruby).

BUN-EATING COMPETITION.—S. Courtney (269 Wolf).

PICKING UP ORANGES.—1, A. B. Hannell (375 Royal Ruby); 2, L. Stagg (499 Sunbeam).

SLOW RACE.—1, E. Thorne (398 A.B.C.).

RELAY RACE.—L. Stagg (499 Sunbeam), S. Parmiter (499 Triumph), and E. Thorne (398 A.B.C.)

Week-End Club Events.

Aug. 5th.—Coatbridge, Airdrie and District M.G.C.—Social Run to Pebbles.
Aug. 5th.—Coventry Triangle M.C.—Run to Kineton.
Aug. 5th.—Middlesbrough and District M.C.—Speed Judging Competition.
Aug. 6th.—Coventry Triangle M.C.C.—Run to Tewkesbury.
Aug. 6th.—Prestwich and District M.C.C.—Social Run.
Aug. 6th.—Kelso and District M.C.C.—Social Run.
Aug. 6th.—Newcastle and Northern M.C.—One-day Reliability Trial.
Aug. 6th.—Leeds Motor Union.—Run to Grassington via Burnsall.
Aug. 6th.—Rotherham and District M.C.—Run to Scarborough.
Aug. 6th and 7th.—Ilkley M.C. and L.C.C.—Social Event.
Aug. 7th.—Eastbourne and District M.C.C.—Impromptu Gymkhana.
Aug. 7th.—York and District M.C.—York-Edinburgh-York Trial.
Aug. 7th.—Barrow and District M.C.—Social Run.
Aug. 7th.—Gloucester M.C. and L.C.C.—Social Run to Burnham.
Aug. 7th.—Sheffield and Hallamshire M.C. and L.C.C.—12 Hours' Trial to the seaside.
Aug. 7th.—Doncaster and District M.C.C.—Saltburn Trial.
Aug. 7th and 8th.—Bulwell M.C.—Run to Skegness.
Aug. 8th.—Neath and District M.C.—Welsh T.T. Races, Pendine Sands.
Aug. 9th.—Exeter M.C. and J.C.C.—Supper Run to Chudleigh.
Aug. 9th.—Ashford M.C. and L.C.C.—Picnic Run to Perry Woods.
Aug. 9th.—Leeds Motor Union.—Impromptu Run from City Square.
Aug. 9th.—Reigate, Redhill and District M.C.C.—Speed Trials.

Southport M.C.

The reliability trial for the "Rudge" cup and other special prizes will be run off on the 13th inst. A race meeting is also being held on the sands on Saturday, the 19th inst., over a straight course approximately one mile in length, commencing at 3 o'clock. Further particulars are available from Mr. Rowland Hill, 75, Selton St., Manchester.

Ipswich and District M.C.C.

Fastest time of the day in the hill-climb at Belstead Brook Hill on the 22nd ult. was made by R. F. Fenn (499 Triumph), both in solo and sidecar events. The slow hill-climb was won by R. O Clarke (247 Levis).

Ilkley M.C. and L.C.C.

Considerable interest was displayed in the contest for the Trade Trophy run off on the 30th of last month, and the fairness of the handicapping resulted in some very close finishes. In the final A. Fieldhouse (499 Sunbeam) beat J. S. Whitley on a similar machine. W. Clough (532 Scott) gained a special prize in a contest with E. R. Hall, who was driving a Bugatti car.

Midland C. and A.C.

Results have now been announced for the 24-hour trial to Holyhead, already described in *The Motor Cycle*.

M.C. AND A.C. TROPHY.—F. W. Giles (799 A.J.S. sc.).

JORDISON TROPHY.—F. W. Giles (799 A.J.S. sc.).

GOWCH TROPHY.—R. F. Turner (293 New Imperial).

B.N. BOWL.—G. Butcher (490 Sunbeam).

TRADER TROPHY.—A. Rollason (994 Ariel).

TEAM PRIZE.—New Imperial (R. F. Turner (293 New Imperial), L. Horton (249 New Imperial sc.), B. Uzzell (976 New Imperial sc.).

MEMBERS' SOLO PRIZE.—R. F. Turner (293 New Imperial).

MEMBERS' SIDECAR PRIZE.—L. Newey (994 Ariel sc.).

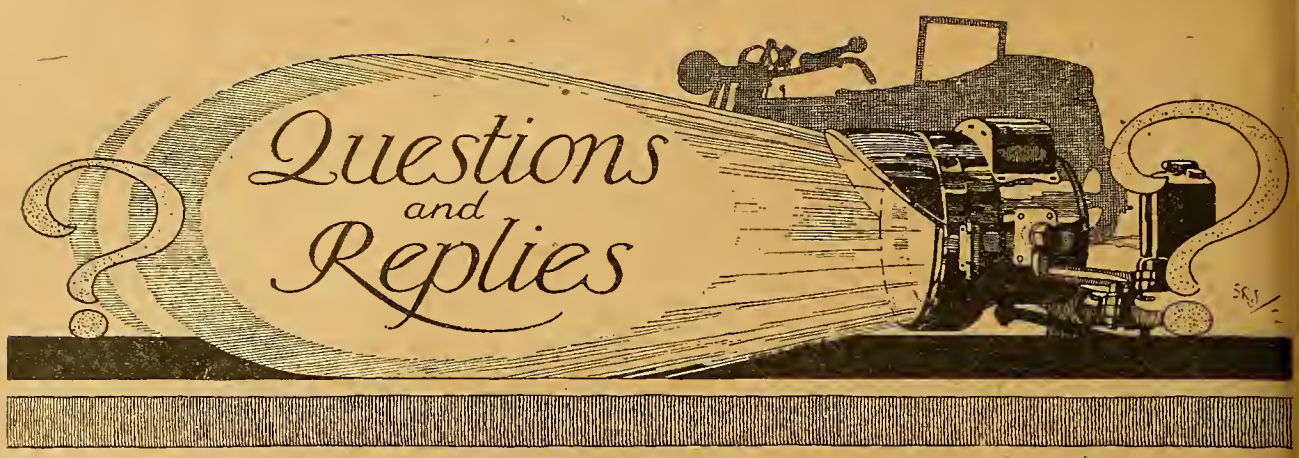
GOLD MEDALS.—R. C. Cooper (269 Allon), L. E. Clules (269 Allon), A. Rollason (994 Ariel), G. Butcher (490 Sunbeam), R. F. Turner (293 New Imperial), F. W Giles (799 A.J.S. sc.).

SILVER MEDALS.—E. A. Barnett (346 Francis Barnett), H. Harris (349 A.J.S.), L. Horton (249 New Imperial), A. R. Evans (499 Sunbeam), J. J. Sykes (599 Sunbeam), W. Woodcock (498 Ariel), R. W. Duke (499 Triumph), L. Newey (994 Ariel sc.), H. G. Uzzell (976 New Imperial sc.), H. F. S. Morgan (8 Morgan).

BRONZE MEDALS.—N. Hall (292 O.K.), H. Greaves (350 Beardmore-Precision), S. W. Lewis (598 Beardmore-Precision), W. B. Gibb (494 Douglas), C. L. Reading (498 Ariel), F. H. Brown (550 Rex Acme sc.), J. W. Meredith (8 T.B.).

Alec Jackson, a prominent Yorkshire club man, who won the Belgian Grand Prix on a 492 c.c. Sunbeam.

Competitors in the Harrogate and District Motor Club's recent reliability trial. G. W. Hill (532 c.c. Scott sidecar) and W. Atkinson (550 c.c. Triumph) at Occaney water splash.



A selection of questions of general interest received from readers and our replies thereto.—All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp) and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

RIGHTS IN STOLEN MACHINE.

A few months ago I bought a motor cycle and sidecar from an auction room. After I had the outfit a few weeks I was summoned for its return or its value, and had to give it up as it had been stolen. I asked the auctioneers to refund the amount paid them for the outfit, but they refused, repudiating all responsibility, as they only acted as agents. Do you think I can recover the amount?—S.S.

No one has any title to a stolen machine other than the rightful owner, and it remains with you to obtain the price you paid from whoever received the money; no doubt the auctioneers merely acted as agents for the person in whose possession the machine then was, in which case they should give you every facility for tracing this person.

GAS-TIGHT LAMP CONNECTIONS.

Has any gas-tight method of conveying acetylene from generator to front lamp yet been devised?—J.R.M.

Good quality rubber tubing of suitable bore should be perfectly efficient. If the generator, however, is a long way from the lamp you might use brass tubing with rubber connections at each end. It is unusual for any serious difficulty to arise in keeping these connections reasonably gas-tight.

VALVE TIMING TERMINOLOGY.

I often see it stated in *The Motor Cycle* that the exhaust valve of an engine closes 10° late. I understand this means degrees. Taking an engine of 75 mm. stroke, does this mean the tenth part of 75 mm?—R.I.

When an exhaust valve is stated to close 10° late it means that the valve closes when the crank pin has rotated 10° or 1-36 of a revolution past the top dead centre.

DESIGNING A SPECIAL SPEED MODEL.

Will you give me the correct wheel-base for a speed machine fitted with 250 c.c. J.A.P. engine, Sturmey lightweight three-speed gear, and 26 × 2¼in. tyres? I understand that large tyres reduce speed. Also what would be suitable gear ratios for such a machine with 11 st. rider? Would there be any objection to raking the handlebars forward and placing the saddle well up the tank, providing the machine was built for this—the obvious reason being weight distribution? Again, do you think that supposing softened cast steel bolts were used to secure a duplex frame machine at all main lugs, they would fracture with continual use, unless annealed periodically?—Lex-Locus.

It is quite impossible to give you definite figures in answer to the questions you raise. If it were possible to state without qualification that such and such a wheel-base was the most satisfactory one, and certain gear ratios would give the best results, there would be no longer any need for the experimental staffs which are retained by most of the leading manufacturers. The solutions to your questions depend entirely upon the results of experiment which you would have to conduct yourself. It does not follow necessarily that a machine steers well if it has a comparatively short wheel-base. 26 × 2¼in. tyres would be quite large enough for racing purposes, but for touring 26 × 2⅜in. would be preferable. The placing of the saddle and handlebars again will need to be determined by experiment. If the results were satisfactory, the disposition which you suggest would be justified, but we cannot say whether it will be successful or not, as we have not tried such an arrangement ourselves. In the ordinary way it is most likely that bolts of mild steel would be used for the purpose suggested, and it is doubtful whether it would be worth while going to the considerably greater expense of using annealed cast steel.

Important Dates.

Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.
Sat., Aug. 5th, and Mon., Aug. 7th.—Irish Two-day Open Trial.
Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.
Sat., Aug. 12th—B.M.C.R.C. Members' Meeting at Brooklands.
Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.
Sat., Aug. 12th, Motor Cycle Races in Phœnix Park, Dublin.
Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.
Fri., Sept. 15th, to Mon., Sept. 18th—Anglo-Dutch Trial in Holland.
Sat. Sept. 16th—The Scott Trial.
Sat., Sept. 23rd—500 Mile Race at Brooklands.
Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.
Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.
Sat., Nov. 25th, to Sat., Dec. 2nd.—Olympia Motor Cycle Show.

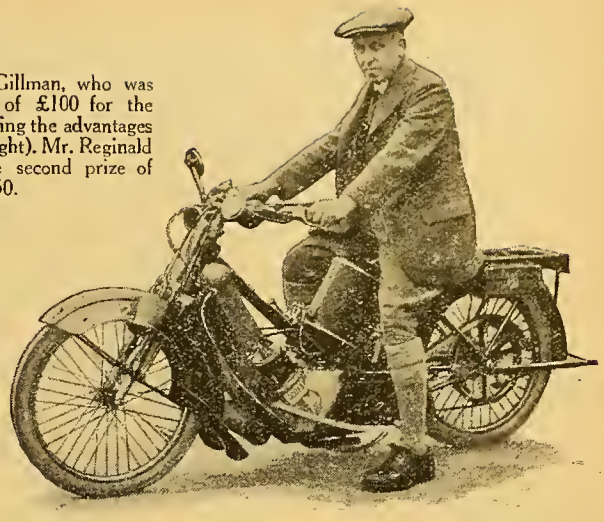
BULB AND ACCUMULATOR VOLTAGES

Having heard that a 4-volt lamp might be advantageously used on a 6-volt accumulator with quite satisfactory results, I adopted this plan some time ago; but my experience was that the accumulator required charging much more frequently—only lasting about one-third of the usual time. Would this be the natural result or have I a "leak" somewhere?—W.J.B.

Using a 4-volt bulb on a 6-volt circuit is almost bound to cause quick running down of the battery, as naturally the resistance is lower than that for which the circuit is designed. As a general rule, however, electric bulbs of low voltage are not very accurately calibrated, and it is possible that you were fortunate in obtaining some so-called 4-volt bulbs of comparatively high resistance.

WINNERS IN THE A.C.U. MEMBERSHIP COMPETITION.

(Left). Mr. A. C. Gillman, who was awarded first prize of £100 for the best ideas demonstrating the advantages of membership. (Right). Mr. Reginald Beal, who won the second prize of £50.



CONDENSATION OF INLET PIPE.

What is the cause of condensation on the inlet pipe, as this has happened on my machine once or twice just lately? It was never noticed during the cold winter months. Would too strong a mixture cause it?—H.L.E.

Condensation on the inlet pipe is caused by the temperature drop associated with the rapid evaporation of the fuel, and is usually a sign of good carburation. It is curious that this has occurred during the summer months only; of course, it is most marked when the atmosphere is humid. If the condensation is excessive, perhaps the mixture is very slightly weak, and a warm air intake or hot jacket on the induction pipe would be an improvement.

BALANCE.

I have a Brown engine fitted to a cycle from which I get fair running, but I think it requires balancing, also it overheats. The bore is 83 mm., the stroke being the same. The reciprocating parts are 2½lbs., rotating parts ½lb. The weights on the flywheels are 17oz. (1.) How much more weight would require to be added to balance correctly. (2.) If pieces of lead were drilled and bolted on to the flywheel and then riveted, would the lead work off, causing damage to the crank case?—R.I.

(1.) If the figures you give are correct you would require approximately 11oz. extra to be added to the balance weights opposite to the crank pin and at a mean distance of 41.5 mm. from the main shaft. (2.) You would find lead unsatisfactory as a balancing material unless it is filled into recesses. If the additional masses must be bolted or riveted on, steel or bronze would be more suitable.

MISFIRING WITH VARIOUS SYMPTOMS.

About a month ago a T.B. magneto on a J.A.P. single developed bad misfiring, and on examining the contact breaker I found a spark was occurring at the platinum points, caused, I thought, by the fibre on the crank arm having worn so that the metal came in contact with the cam. Rectifying this cured the misfiring and the machine was then run successfully for five hours in a Welsh downpour, but on trying the machine a few days later only a sharp shock could be felt intermittently on the contact breaker cover and the cycle frame, while a spark was obtainable between the H.T. cable and cylinder, but not at the plug points. (I have tried four different makes of plugs with no success.) Is this caused by water entering magneto or a defect necessitating its return to the makers?—G.A.

The first trouble would appear to have been due to faulty condenser or condenser connections. In the second case it is probable that water has entered the magneto down the high tension lead, and you might be able to dry this out by warming the parts or the whole magneto very gently in an oven, though the temperature of the instrument itself must never be allowed to reach the melting point of wax. An hour or so of this treatment should cure the trouble if it is due to water only, otherwise you should apply to the manufacturers. If the sparking at the contacts still persists, return the magneto for overhaul.

WILL MAGNETO OPERATE HORN?

I am thinking of fitting an electric horn to my Scott to be run from the magneto cut-out terminal, and shall be glad if you will tell me: (1) If this is practicable and advisable, and (2) what voltage horn to use?—G.E.F.

It is not practicable to work an electric horn from the magneto cut-out terminal of a Scott motor cycle.

A fleet of Bradbury machines which took part in a recent demonstration run from Oldham to Blackpool. Decorated with colours and bearing large cards displaying the maker's name, this string of two dozen or so machines of the same make attracted considerable attention.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

M.G." (Woking).—490 c. c. Norton (16H) with T.T. engine.

"L.G.B.D." (Bristol).—650 c.c. Excelsior single and sidecar.

"E.W.R." (Newark).—"Challenger" puncture proof tubes; Impervo puncture seal; and F.E.W. valve attachment for 499 c.c. Sunbeam.

"F.R.S." (Bristol).—247 c.c. Levis G.Z.K.S. model.

"E.M.D.B." (Hastings).—The Atomiser Co.'s (South Shields) No. 7. atomiser.

"V.D.L." (Glasgow).—654 c.c. Quadrant; 499 c.c. Dunelt.

"B.P." (Worcester).—532 c.c. Scott: intermittent metallic noise in vicinity of crank case.

"B.G." (Dublin).—398 c.c. A.B.C.

"S.J.T." (London).—398 c.c. A.B.C.: hints on tuning; extra air devices.

"E.A." (S.W.18).—998 c.c. Blackburne with Binks carburetter.

RECOMMENDED ROUTES.

BURSLEM TO CARDIFF.—F.W.

Burslem, Newcastle-under-Lyme, Eccleshall, Newport, Shrewsbury, Church Stretton, Craven Arms, Ludlow, Leominster, Hereford, Ross, Wilton, Whitchurch, Symonds Yat, Monmouth, Raglan, Usk, Caerleon, Newport, Cardiff.

WILLENHALL TO ABERYSTWYTH.—E.N.

Willenhall, Leamington, Warwick, Stratford-on-Avon, Alcester, Worcester, Bromyard, Leominster, Eardisland, Kington, New Radnor, Penybont, Rhayader, Llangurig, Dyffryn Castell Inn, Yspytty-Cynfyn, Aberystwyth.

MANSFIELD TO BLACKPOOL.—F.G.

Mansfield, Chesterfield, Baslow, Chatsworth Park, Haddon Hall, Bakewell, Buxton, Macclesfield, Chelford, Knutsford, Warrington, St. Helens, Rainford, Ormskirk, Rufford, Longton, Kirkham, Blackpool.

BARNES TO ST. AGNES.—J.W.C.

Barnes, Kingston-on-Thames, Surbiton, Esher, Cobham, Ripley, Guildford, Farnham, Alton, Chawton, Alresford, Winchester, Romsey, Salisbury, Wilton, Shaftesbury, Sherborne, Yeovil, Crewkerne, Chard, Honiton, Exeter, Okehampton, Lifton, Launceston, Bodmin, Indian Queens, Mitchell, Zelah, St. Agnes.

BRISTOL TO EASTBOURNE.—C.J.T.

Bristol, Bath, Warminster, Codford St. Mary, Deptford, Salisbury, Romsey, Winchester, Bramdean, Petersfield, Midhurst, Petworth, Fittleworth, Pulborough, Storrington, Washington, Steyning, Bramber, Old Shoreham, Brighton, Falmer, Lewes, Beddington, Polegate, Willingdon, Eastbourne.

British Tyres for Belgian Royalty.

The Coventry Victor engined machine, recently supplied to H.M. the King of the Belgians, has been equipped with Bates tyres.

Found on the Road.

The back rest of a pillion seat on the Bath road, near Midgham, on Wednesday, the 19th inst., by Mr. R. Stewart Knill, who may be addressed at West End Farm, Midgham, near Reading.

Clincher Tyre Successes.

At the recently held Essex Motor Cycle speed trials, S. M. Greening, who won forty-one first prizes, eight second prizes, and three third prizes on time and formula on his 248 c.c. Jap-engined Francis-Barnett, used Clincher de Luxe tyres.

A Foot-controlled Gear.

The 349 c.c. Weatherell, on which R. Weatherell recently won the 100 miles handicap at Brooklands, was equipped with the three-speed gear with foot control manufactured by the Moss Gear Co., Ltd., of the Crown Works, Thomas Street, Aston, Birmingham.

Amended Awards.

In the recent report of the Midland Centre A.C.U. reliability trial, it was stated that E. Foster, riding a 698 c.c. Raleigh motor cycle, had been awarded a silver medal. It has now been announced that his performance in this event won him a gold medal, not a silver one.

Cleaning Coachwork.

Motor cyclists who take a pride in the appearance of their sidecar bodies may obtain a free sample of Chemico car polish by applying to the County Chemical Co., Chemico Works, Birmingham. This preparation brightens up dull coachwork in a remarkable manner, and is claimed to remove tar stain.

Additions to Prize List.

Further trophies, bowls, vases, and sparking plugs (presented by the Manufacturers' Union; Capt. G. S. Jones, Ruthin; the Sphinx Manufacturing Co., Ltd.; and the Robinhood Engineering Works, Ltd.) have been added to the award list in the North Wales Open Trial to be held on the 12th inst.

Chain Spares.

Realising that some difficulty is occasionally experienced in obtaining chains and various chain accessories in London, arrangements have been made for stocking a complete range of Renold, Coventry, and Brampton chains, as well as spring, cranked, double and triple connecting links in all sizes, by The Service Company, Ltd., of 289-293, High Holborn, London, W.C.

Racing in Ireland.

The machines which secured first and second places in the Open Fifty Miles Championship of Ireland—and also those which gained first and third positions in the Fifty Miles Handicap Race (Unlimited c.c.), were all shod with Dunlop tyres.

Success of Rotary Valve Two-Strokes.

In all the recent open trials in which they have been entered, success has been attained by the rotary valve engined Sun Vitesse machines, and the list of awards gained by the Sun Cycle and Fittings Co., Ltd., of Aston, Brook Street, Birmingham, is an imposing one.

Birmingham Foundry Exhibition.

At the Foundry Exhibition at Bingley Hall, Birmingham, recently, a national competition for foundry employees was held. Men from the Midland Motor Cylinder Co., Ltd., Smethwick were successful in taking three prizes.

Tyre Works Success.

The Avon fire brigade at the works of the Avon Indiarubber Co., Ltd., at Melksham, in Wiltshire, won the Rowell Challenge Cup at the recent annual competition of the West Midland District of the Fire Brigades' Association, held at Abingdon, against ten other well-known brigades.

Grand Prix Echoes.

Dunlop tyres were used on the first three machines in the 500 c.c. class of the Belgian Grand Prix.

A. Jackson, who won the 500 c.c. class in the Belgian Grand Prix on a 499 c.c. Sunbeam, used an M-L magneto.

K.L.G. plugs were used by Bennett (Sunbeam) and Davison (Levis), who won the 500 c.c. and 250 c.c. French Grand Prix races respectively.

Price Reductions.

Reductions in prices are announced by Humphries & Dawes, Ltd., manufacturers of the O.K. Junior motor cycles. The prices are as follows: Sillocar outfit, £86 2s.; the XV. All Chain Solo model, £69 6s.; the XVI. Sports model, £67 4s.; the XII., £58 16s.; the XI., £53 11s. The fixed gear model remains at £39 18s., but it has been modified.

The prices of the O.K. Junior 4-stroke machine, fitted with Blackburne engines, now stand as follows: Chain-cum-belt drive, £73 10s.; all chain model, £75 12s.

Catalogues Received.

New Imperial Cycles, Ltd., Imperial Works, Princip Street, Birmingham: An illustrated list of spare parts for the "New Imperial light-tourist" all-chain drive models. Copies will be forwarded on receipt of a postcard.

Banshee Manufacturing Co., Ltd., Crown Close Works, Bromsgrove, Birmingham, manufacturers of Banshee motor cycles: An illustrated catalogue attractively designed, together with complete specifications of the various models shown.

T.O.M. Company, Ltd., 6, Princes Street, Hanover Square, London, W.: A catalogue entitled "Everything for Camping and Touring," containing full particulars of all camping requisites.

B T-H

During the last few weeks we have been fortunate enough to obtain a large number of exceptionally good second-hand machines in exchange for new, and in order to reduce our stock we are offering these machines at actually under **cost price,** which is considerably below market value. Any machine may be purchased on our **Extended Payment System over a period of twelve or eighteen months** at a small additional charge, and for the benefit of Country Clients any machine is sent on twenty-four hours' approval. Here are just a few of the many bargains we have to offer that may be inspected in our Showrooms from **9 a.m. until 7.30 p.m., Saturdays included.**

MATCHLESS, 1920, model H, 2-sr., spare wheel, Easting windscreen.. **£125 0**
MATCHLESS, Victory model, Lucas dynamo lighting, spare wheel, Easting windscreen **£98 0**
DOUGLAS, 1921, 4 h.p. comb., lamps and horn, speedo., Easting windscreen **£95 0**
DOUGLAS, 1921, 2¾ h.p., 3-speed, clutch and K.S., lamps and horn, speedometer **£65 0**
DOUGLAS, 1919, 4 h.p. comb., all lamps and horn **£77 10**
DOUGLAS, 1916-17, 2¾ h.p., 2-speed, all lamps and horn **£42 10**
LEVIS, 1917, 2½ h.p., excellent cond. **£28 0**
ENFIELD, 1915, 3 h.p., 2-sp., T.T., very fast **£32 10**
ENFIELD, 1916, 3 h.p., 2-sp., fully equipped **£37 10**
TRIUMPH, 1922, 3½ h.p. Ricardo, tax paid, run 20 miles, unscratched **£115 0**
TRIUMPH, 1921, 4 h.p. all-chain comb., Lucas lamps, speedo., horn, Easting windscreen **£115 0**
TRIUMPH, Baby, 2½ h.p., 2-speed, thoroughly overhauled **£30 0**
TRIUMPH, 1912, 3½ h.p., clutch, lamps and horn, very sound .. **£28 0**
INDIAN, 1915, 3½ h.p. Twin, 3-sp., clutch and K.S., fully equipped .. **£42 10**
TRIUMPH, 1911, 3½ h.p., clutch, T.T. bars, very fast **£26 0**
HARLEY-DAVIDSON, 1920, 7-9 h.p., elec. model comb., fully equipped.. **£115 0**
NEW IMPERIAL, 1919, 8 h.p., and practically new, Watsonian R34 sidecar, fully equipped **£85 0**
NEW IMPERIAL, 1921, 2¾ h.p., 2-sp., cl. and K.S., elec. ltg., very fine condition **£48 0**
ROVER, 1913-14, 3½ h.p., 3-sp., cl. and pedal starter, all lamps **£37 10**
HOSKINSON, 1921, 2½ h.p., 2-sp., cl. and K.S., fully equipped **£37 10**
READING STANDARD, 1920, 8-10 h.p. comb., dynamo ltg., hood and screen, exceptional condition **£100 0**
ROYAL RUBY, 1917, lady's model, 2½ h.p., 2-sp., fully equipped, as new **£32 10**
SCOTT, 1921, Squirrel, 3½ h.p., Brooklands winner, many special fitments, rare opportunity..... **£77 10**
COULSON, 1920-1, 4 h.p. Blackburne, 2-speed, fully equipped **£48 0**
BAT, 1920, 8 h.p., spring frame, all-chain drive and Henderson Elite sidecar, fully equipped **£87 10**
SINGER, 1914, 4½ h.p., 2-sp. countershaft, cl. and K.S., very handsome, coachbuilt sidecar, practically new, fully equipped **£47 10**
BRADBURY, 1913-14, 3½ h.p. N.S.U., 2-sp., re-enamelled black and gold, very sound..... **£27 10**
B.S.A., 1919, 4½ h.p. comb., all lamps and horn, Easting windscreen, splendid order **£67 10**
OMEGA, 1921, 2¾ h.p., J.A.P., 2-sp. cl. and K.S., fully equipped **£45 0**
VERUS, 1920-1, 2¾ h.p. Blackburne, 2-sp. cl. and K.S., fully equipped.. **£48 0**
NEW HUDSON, 1920, 2¾ h.p., 2-sp., fully equipped **£37 10**

Apart from the above, we have over 50 brand-new models in stock, and can supply any make on Extended Payments over a period of eighteen months. Full list free on request.

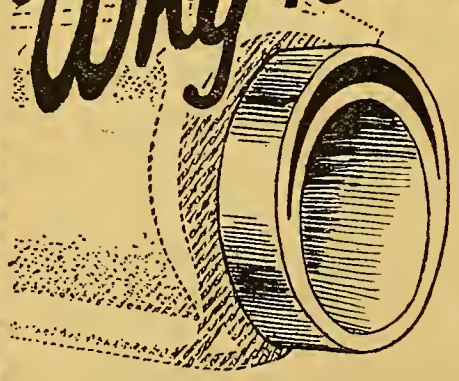
Why tolerate Punctures?



The Remedy is Simple and Prices are Reasonable.

The perfect **Puncture-Sealing** Tube discovered at last. **Challenger Patent Puncture-Sealing Tubes** are practically indistinguishable from the ordinary old-fashioned tube. They are absolutely pneumatic throughout and contain no messy or sticky substances, nor is there any solid filling, nor anything which will collect in a lump in the tyre while the car is standing. The only difference from an ordinary tube is that the tread portion is very slightly thicker and is built of three layers so adjusted as to be self-sealing; the centre layer being composed of the patent hole-proof composition, which instantly closes up when the nail or article causing the puncture is withdrawn.

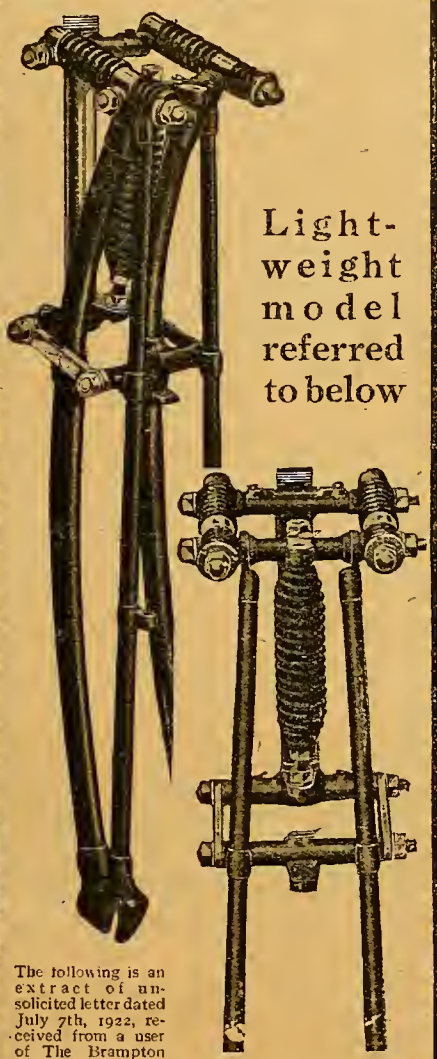
The

BRAMPTON

BI-FLEX SPRING FORK.



Light-weight model referred to below

The following is an extract of unsolicited letter dated July 7th, 1922, received from a user of The Brampton Bi-Flex Spring Fork resident in Ayrshire.

"For the past two years I may say your Fork has done something like 50-60 miles per day, over atrocious roads, and in a hilly district where pot-holes are the rule and not the exception. Nevertheless, riding has always been comfortable and not productive of the tired feeling so common to lightweight riders."

For comfort's sake choose a Motor Cycle fitted with The Brampton Bi-Flex Spring Fork. Measurement form and descriptive booklet illustrating models for Motor Cycles of 2¼ h.p. and upwards will be forwarded on request, applications for which are invited.

BRAMPTON BROS., Ltd.
Oliver Street, BIRMINGHAM.

Sheen Park Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.

Yours faithfully,
JOHN O. GRIFFITS.

23, London Road,
Leicester.

Gentlemen,
I find the Building you sent me very satisfactory, and consider it very good value for the money.

Yours faithfully,
J. CROSBY.

"Alma,"
Alexandra Road,
Cowes, I.O.W.

Dear Sirs,
I have received the Building in good condition and I consider it an excellent piece of workmanship and an exceptional bargain.

Yours faithfully,
L. G. CHINCHEN.

MAGDYNAMO Engineering Co., Ltd., for magnetos, spares, and repairs.

MOTOR Cyclists fit reliable high quality magnetos now and avoid certain failure of inferior magnetos.

BOSCH Enclosed Waterproof Type D.A.L. Magnetos. Government surplus, ready to fit on Indian, Harley, J.A.P., or any big single or twin, gives powerful spark at all engine speeds, makes your engine a real live engine, give you easy starting, smooth and rapid acceleration, high speed, and low fuel and oil consumption with increased power; price only £5 each, postage 1/6 extra; a 12 months' written guarantee sent out with each magneto. We give you satisfaction or refund cash.

PLEASE Note, the above type magnetos were originally manufactured for 200h.p. aircraft engines; therefore we have every confidence in claiming them to be the magneto you require for your big machine. Fit one to-day, and see life with a live machine.

HARLEY-DAVIDSON Owner writes: "Magneto to hand; many thanks for prompt despatch, satisfactory in every way; will recommend to my friends."

ZENITH Owner writes: "Since fitting magneto have completed a run of 250 miles; highly satisfied; will certainly recommend these magnetos."

REMEMBER your magneto is sent on 14 days' approval against cash per return on receipt of your order; there is no obligation to keep it until you have used it for 14 days on your machine and are satisfied; let us send you one now.

ARE You a Discerning Douglas Owner? Do you want a reliable magneto with 12 months' guaranteed service that will give you starting without worry, a smoother running, and more powerful engine and better results from your Douglas? Then send for a latest enclosed waterproof type Bosch ZA2 magneto now, price only £5, carriage 1/6.

C.A.V. Magnetos (not converted starters), ready to fit on Triumphs, B.S.A.'s, Nortons, and P. and M.'s, with 12 months' guaranteed service, price £3/10, carriage 1/6.

THOMSON-BENNETT Magnetos, latest enclosed waterproof type (not converted starters), ready to fit on 55° Clynos and 180° Douglas machines, with 12 months' guaranteed service, price £3/10, carriage 1/6.

MOTOR Cycle and Car Owners, are you testing all your sparking plugs properly? Are you wasting pounds yearly by throwing away good plugs? Fit a Bosch aeroplane hand starter magneto on your garage bench to-day and always have your sparking plug tester at hand, price £2, carriage 1/6.

TRADE discounts and export quotations.—Write, call, or 'phone for terms.

A YEAR'S guarantee on repairs. Before you scrap that magneto, whatever its condition, let us see it, we will rebuild your magneto to look and work like new, no matter what make, within 3 days or 24 hours if urgent, and return it with a written 12 months' guarantee. While your magneto is being repaired we can lend you another free of charge. We could not make these offers if we were not certain of the quality of our work.

YOUR old magneto will be equivalent to new at a low cost. Send us your defective magnetos now.

"IT'S A GRAND BUS."

"When I sent you my order I was doubtful of a little 2¾ H.P. Douglas doing 55 m.p.h.—your guaranteed speed; she actually touches 60 m.p.h.," writes J. R. L.

You'll be surprised if you place your order with me for my Special Model Douglas. It is fitted with Zoom! Zoom!! Exhaust System, Tony Combined Aluminium Footboards and Footrests, Special Radiated Pistons, Twin Rings, Alloy Valve Caps, Barrel Valve Springs, and guaranteed to do 55 m.p.h., and it does it. Price **£69 10s.**, delivered anywhere. Extended payments over twelve months if desired.

ZOOM! ZOOM!!

The most efficient exhaust system in burnished nickel nr copper, expansion chamber 9½ times the capacity of the cylinder. No back pressure, no "crackle," just an inoffensive Zooming. Adds £10 to the appearance of any Douglas. Price **30/-** copper, **33/6** nickel.

THE CORAM RADIATED PISTON

gives more power, less friction, keeps the engine cooler, bearings last longer, increases revs. at least 1,000, ozs. lighter than any other piston. Complete with twin rings and gudgeon, **14/6** each.

THE TONY PATENTED COMBINED FOOTBOARD AND FOOTREST.

Beautifully made in burnished aluminium with serrated footgrip and solid rubber footrest in ideal position, greatly improves the appearance of your mount, and is practically unbreakable and always tidy. Price **30/-** per pair.

Any Spare for Douglas or Williamson sent by return. Apart from my large stock I am right on the spot. **Repairs,** including complete renovating, enamelling and plating, in seven days.

Misleading Comments on the Pastime.

OUR attention is frequently drawn to the fact that several daily and weekly lay newspapers are in the habit of publishing motor cycle notes which are misleading to an extreme. The humorous *faux pas* so often noted in our "Current Chat" columns are not primarily referred to; the unfortunate errors are those of exaggeration and the lack of a proper sense of perspective on the part of the writer.

To name one instance only, a motor cycling correspondent to a daily paper remarked that the small number of failures in a certain trial on Kop Hill was surprising. Now, as many of our readers know, it is really surprising that any machine should fail at all on the acclivity in question, which is "a second gear climb" of the most typical variety! Ignorant statements such as these are common; every week we have instances pointed out by readers.

Again, our great national dailies tend too much to be actually London dailies; and in their motor cycle notes this is particularly apparent. They lack knowledge of the respective values of trials, races, etc., and take it for granted that an event within easy reach of the Metropolis is necessarily more important than one in, say, Yorkshire or Wales, and consequently accord it undue prominence.

The Motor Cycle has always endeavoured, and we venture to think with every success, to avoid misleading impressions of this kind; North Country and Midland events irrespective of distance fall within our regular scope. It is regrettable therefore that the non-motor cycling public should be misled in any way as to the respective importance of events whether they are held North, South, East, or West, simply on account of the fact that, by reason of environment, the London newspapers single out "local" events for special attention in their motor cycle notes.

In the Rain.

FOR a great many people, the first sign of rain turns motor cycling from a pleasure into a penance. This should not be; and, in view of the discouraging weather of June and July, the comment may be worthy of greater emphasis.

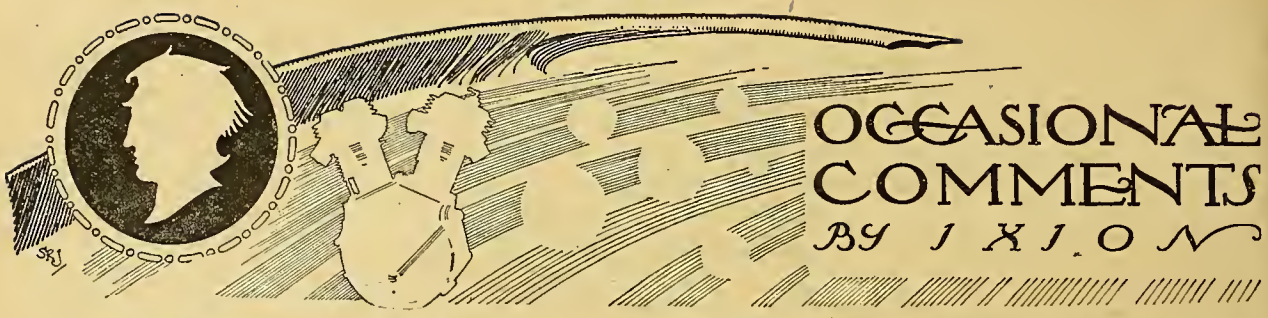
Actually when dark clouds promise to mar yet another week-end, the keen motor cyclist feels glad that he is a motor cyclist. He knows, especially if he is a city dweller, that his machine will save him from being compelled to spend his precious leisure hours indoors. He simply wraps up well in oilskins and waders and gets out on to the road.

Mudsplashing is a pleasant recreation only if the machine is well greased or possesses an all-weather finish and the rider is suitably clad. A long oilskin coat of good quality and a pair of waders fulfil the latter requirement; ordinary clothing may be worn underneath.

Too few machines, however, possess an all-weather finish, and many are none too easy to clean no matter how well they may have been greased before use. It is this that discourages all but the enthusiast from wet-weather riding. Lack of fully efficient mudguarding is quite a secondary consideration.

Huge mudguards and other necessarily unwieldy protective devices are not going to do nearly so much to popularise the motor cycle as an all-weather vehicle as is a rustless finish along with a minimum of mud-collecting nooks and crannies.

An index to the advertisements in this issue will be found on the page facing the back cover.



Weigh It—According to Law.

I AM receiving complaints from all over England that the licensing authorities are charging maximum tax for certain makes of machine which are advertised as coming out below the 200 lb. limit. The Scott Squirrel is a case in point. Weighed as the law demands, this machine scales just under 200 lbs.—198 lbs. to be precise in the several cases which I have personally tested, and is therefore amenable to the 30s. rating. What often happens is that a rider applies for registration, fills in the weight at 198 lbs. or thereabouts, and then fills his tanks and attaches crowds of accessories. A week later he usually receives from the licensing authority a demand for a certified weight ticket. Off he goes to the nearest weighbridge, and his ticket not unnaturally states 210 lbs. or more as the weight. Moral: get a certified weight ticket for any machine near the borderline before you start converting it into a gypsy caravan —local authorities are not fools, and require convincing in respect of those 190 lb. machines.

Dangerous Driving.

THERE are two ways of maintaining a satisfactory average speed across country. The commonest is never to let your speed drop below 25 m.p.h. or so, and incredible as the statement may appear to the unobservant, this is actually the everyday practice of perhaps seven riders out of ten. I stationed myself in a broad city street with a stop watch the other day. The timing was naturally rather of the policeman type, but approximately it was true that the majority of the riders under observation negotiated the quite heavy traffic at well over legal limit. I then hied me further out along the same main road, and roughly timed over fifty riders on a perfectly safe and straight stretch. Only one man was beating 30 m.p.h. The ordinary tourist and utility rider averages between 20 and 28 m.p.h., and he does it by keeping very close to his mean speed all the time. My own driving method is entirely different. I don't in the least mind dropping to ten or even five m.p.h. wherever the conditions suggest instantaneous control of the machine. In towns and villages I am perpetually being overtaken, even by Fords and baby two-strokes and 500 c.c. sidecar outfits, none of which are inveterate speedsters. When I have the road to myself I don't keep the throttle behind the 30 mark; in fact, I usually give my sports engine all it can take. Casual spectators at farmhouse windows doubtless ejaculate "Look at that ——fool!" as I streak past their lonely homesteads. But in sober fact I am a far, far safer driver than the man who never exceeds 30 and who seldom slows down below 25. Daily observation convinces me that most of us travel much too fast in trafficky places; and travel a good deal slower than we need on the genuinely open road. Nervous riders are among the worst offenders; traffic frightens them, and they push ahead hard in their subconscious eagerness to be clear of the town.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

Motor Cycle Mania.

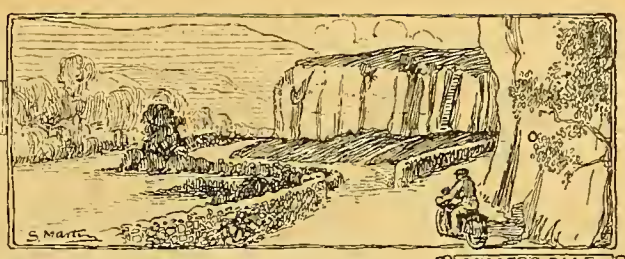
A DISTRESSED *paterfamilias* approached me this week requesting that I would wean his seventeen year old son from his perverse passion for motor cycles and all things connected therewith. I refused with oaths. Papa's grouse was that Sonny ought to have been concentrating on logarithms or something readily convertible into £ s. d. at a later stage of his career. My refusal was based on the fact that a growing lad usually spends a good many hours of his time in dreamland, and he may easily elect to dream of costlier and less healthy commodities than motor cycles. True, the motor cycle will certainly soil his paws; but there are worse alternatives. It is just the first edition of calf love—silly, perhaps; innocent, certainly; harmless, probably. I asked papa what was his leading interest in life at a similar age; and papa went rather pink. So that's that.

Lost His Piston?

I SUPPOSE you never did that, reader? Neither did I. I have dropped most parts of my machine and its equipment on the road at various times, including my pillion passenger. But young Fitz Wilkins actually contrived to lose his entire piston. The machine was originally a sports bus, and he proceeded to super-sport it. Took off everything removable. Balanced the road wheels. Streamlined the tubing of the frame. Finally he got to work on the inside of the engine with drills and file. The pace gradually rose from the manufacturer's 60 m.p.h. till two reliable observers timing with 17s. 6d. Ingersolls reported that he had done the flying mile at 78·2 m.p.h. "Just a little more drilling," mused Fitz Wilkins, "and I shall get 80 m.p.h.!" Perhaps he did. He found pieces of the bottom of the crankcase. Twisted relics of the conrod. Possibly one-third of the gudgeon pin. But nowhere even the tiniest portion of the piston.

Which indicates that amateurs should leave well alone.

DERBYSHIRE

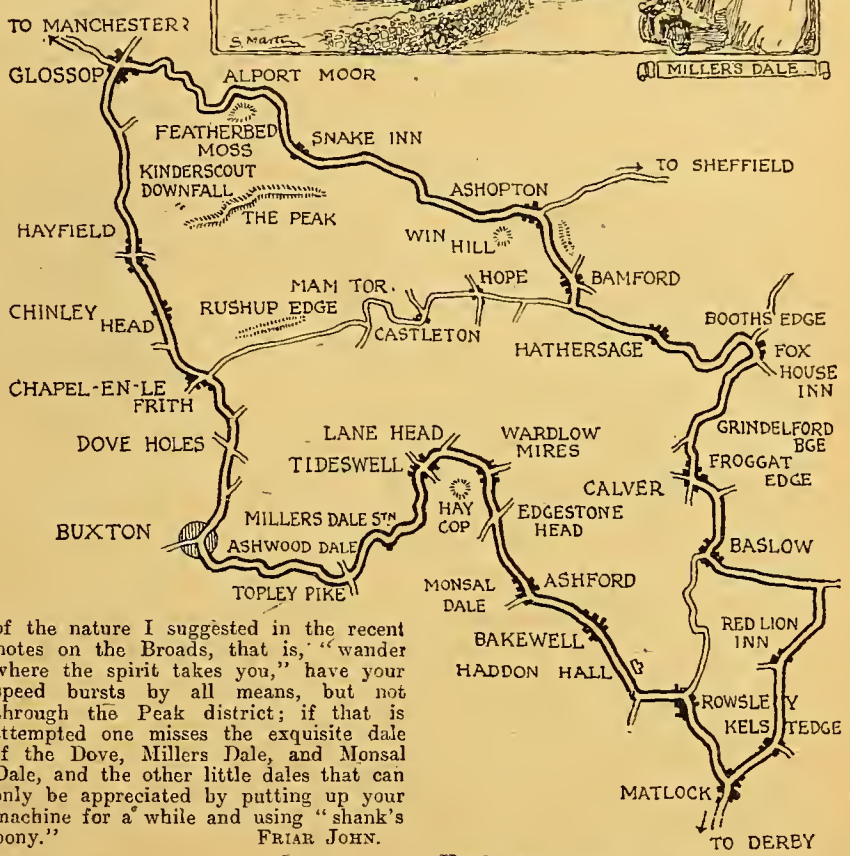


Notes on the Peak District, which offers Attractions for a Month's Exploration, yet can be encircled in a One Day's Run.

A COUNTRY of wooded vales with silver trout streams flowing over grey boulders, a land of well graded highways and awkward by-ways of unsurpassing beauty; of little sheep farms and great lime quarries—such is Derbyshire; but it is her dales that place the county among the beauty spots of Great Britain, so distinctive are they. No other landscape is like her's, except, of course, parts of the adjoining county of Yorkshire, but even Yorkshire has nothing to compare with High Tor, Matlock—that beetling cliff which towers over the straggling town and vale, dominating even in the bright summer time, but forbidding and majestic when the winter gales tear along the chasm below. The Peak district of Derbyshire is situated at the base of the Pennine Range, is surrounded on the south by comparatively uninteresting country, and is easy of access from many big towns; much of its beauty can be seen in one day. The district is compact, and no matter what spot you may select as a centre, the most interesting places can quickly and easily be reached.

On writing touring notes it is usual to give a route district from village to village, on no account forgetting the places of "interest" which frequently consist of some broken down ugly ruin or massive ancestral home of a duke, but I fancy the average motor cyclist when touring thinks more of a massive grey boulder set in a sheet of purple heather near to a trout stream—a likely luncheon spot—or of the state of his machine and the roads, or the hotel which is to shelter him that evening, than he does of show places *en route*.

In the run planned on this page, places and buildings which should not be missed are italicised, but commend me to a tour



of the nature I suggested in the recent notes on the Broads, that is, "wander where the spirit takes you," have your speed bursts by all means, but not through the Peak district; if that is attempted one misses the exquisite dale of the Dove, Millers Dale, and Monsal Dale, and the other little dales that can only be appreciated by putting up your machine for a while and using "shank's pony."

FRIAR JOHN.

DISTANCES OF THE BIG TOWNS FROM BUXTON.

	Miles.
Buxton to London	164
,, ,, Liverpool ...	53
,, ,, Birmingham ...	64
,, ,, Southampton ...	191
,, ,, Nottingham ...	49
,, ,, Leeds ...	62½
,, ,, Norwich	172½
,, ,, Cardiff	163½
,, ,, York	81½
,, ,, Newcastle on-Tyne	153½

A SUGGESTED ROUTE.

BUXTON is a good centre from which to explore the Peak; even within walking distance are to be found some of the finest views in Derbyshire.

BUXTON—HATHERSAGE (via TIDESWELL)—36 miles.

Leave by High St. and London Rd. Make the tour of Duke's Drive on to the picturesque road through Ashwood Dale and Wye Dale; ascend Topley Pike, then turn down Sandy Dale to Millers Dale Stn. (*from Buxton the gorges should be visited on foot*). Then on to Wardlow Mires (*waterfall on right*), Edgestone Head (*fine view of Monsal Dale*), and Ashford. The road then follows river bank to Bakewell. From the market place keep straight on, past Haddon Hall, to Rowsley (*grand view of the Derwent Valley*), on to Beeley, taking the South Lodge of Chatsworth Park. Cross the river immediately afterwards, and take the road to the beautiful village of Edensor; then on to Baslow. (*Instead of going from Rowsley direct to Baslow, Matlock may be included—see map*). Still following the Derwent Valley, cross the river into Calver, then on to Grindleford Bridge, Fox House Inn, Booths Edge (*The Surprise 1,050 ft. on left*), and Hathersage.

HATHERSAGE to BUXTON (via CASTLETON)—19 miles.

Take Castleton Rd. on left, following the river valley on to Hope, Castleton, and Mam Tor (*1,709 ft., magnificent view of the vale*), over Rushup Edge (*fine scenery*). Descend into Chapel-en-le-Frith, past Dove Holes, Fairfield, to Buxton.

HATHERSAGE — BUXTON (via GLOSSOP).—This is an alternative route of 34 miles through magnificent scenery. (see map)

A Week in the High Alps

The passage of the Col d'Izoard, which was traversed with the help of workmen on the road.

Previously the author described his motor cycle tour from Cannes to Aiguilles. This, the concluding instalment, details the journey over the Col d'Izoard, through Briancon, La Grave and on to Aix-les-Bains.

By C. B. WATERLOW.

IT is noteworthy that the remote region of the Val Queyras was first *discovered* as a touring ground and centre for Alpine climbing by an Englishman named Coleridge, so I was informed by the Mayor of Aiguilles. This amiable official presides over an enterprising little Syndicat d'Initiative for the district and does all he can to attract tourists.

The Val Queyras once visited will call you back again. Though pressed for time, I stopped three nights, and the days were brilliant and perfect. Three weeks would not exhaust the excursions to be made, but with a motor bicycle in three days one can cover most of the ground that is practicable for the machine, and here especially it scores over a car, for mountain tracks can be pursued to their limits without fear of getting into serious difficulties.

The next stage of my route lay over he Col d'Izoard (7,900ft.), the loftiest of all except the Galibier, and after the experience of he Col de la Cayolle, 100 miles further south, the possibility of passing it seemed somewhat doubtful. The proprietress of the Grand Hotel—*madame* is always far more important than *monsieur* in such establishments—said that, alas, the *col* was not yet quite clear, though they were working on it for a large party of British journalists due to arrive there about the 27th of the month; and what a pity it was, for the scenes up there had not their equal in the world. In the height of the season when motor coaches came over and stopped for lunch at her hotel, every day she was accustomed to hear forty or fifty people all saying that it was the most marvellous view on earth. In imagination I could hear these good tourists all saying it, all at once and at the top of their voices. Though a thorough Francophile, I do not appreciate the babel of their conversation when many are gathered together, and was thankful for the tranquillity of being the first tourist of the season. This was not to last, for several motoring parties arrived on my heels.

But the Col d'Izoard! At least I would try it, and would go as far as possible, returning *via* Guillestre and the valley of the Durance only if compelled to do so. Madame thought that I should be taking undue risks; perhaps she thought it mad!

It is the first duty and delight of the tourist to pursue the main road to its limit on the slopes of Mont Viso. The village of Abries, three miles further up the valley, is very interesting and dilapidated, but it also boasts a Grand hotel that was not open at the time of my visit. There is an old covered market in this village dating from 1259 and profusely inscribed with the most laudable sentiments, for the peasants in the high Alps are always very pious. Some of this writing still legible on its walls runs like this: "Good reputation is preferable to great riches and friendship to gold and silver. Be good to all, respect misfortune, love peace, honour merit, be kind and charitable." Peace is there to be loved, and who would not obey this injunction now except, alas, a few staff officers and profiteers?

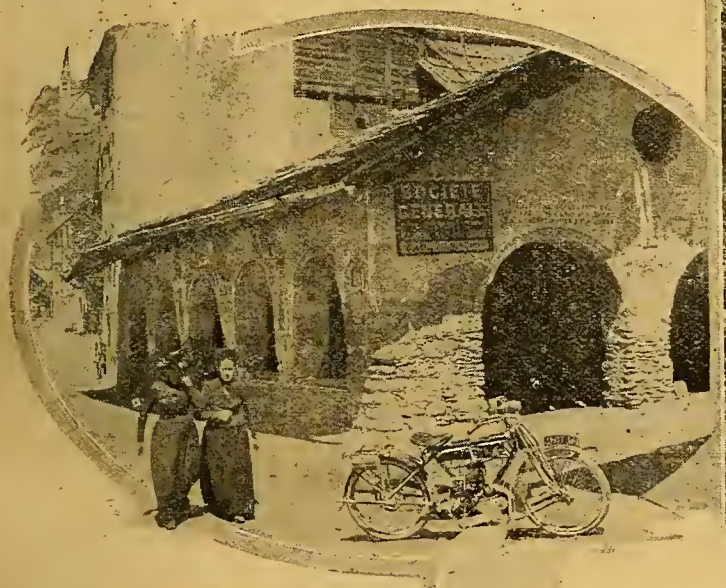
Motor Cycling at 5,500 feet above Sea Level.

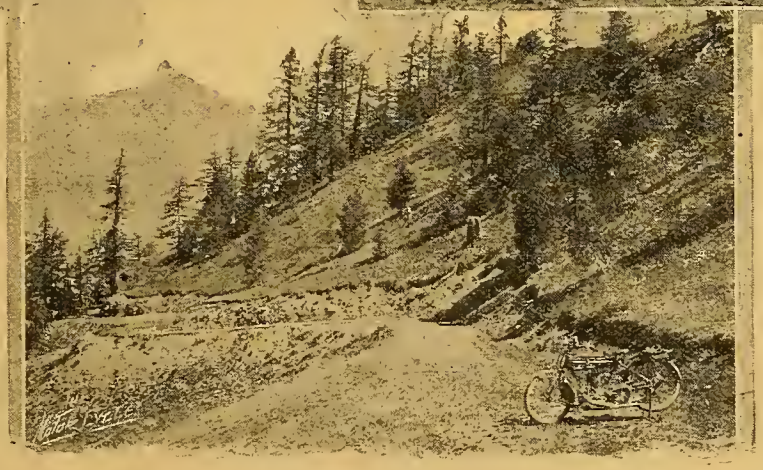
Continuing up the valley the road passes three small villages, becomes extremely rough and stony, and ends at an elevation of about 5,500ft. at a post erected by the Touring Club de France, indicating that twenty minutes' walk takes one to the full view of Mont Viso (12,602ft.). To see this view at its best one should rise early, for even in fine weather clouds soon begin to float about the gigantic crags of Mont Viso, which stands alone and unrivalled, dominating the whole of this region of the Alps. On the grassy slopes known

A Week in the High Alps.—

as the Belvédère de Mont Viso there is, in early summer, a wealth of flowers that cannot be believed unless it be seen. It is as though Paradise, leaving the earth at the fall of man and passing skywards, had dropped something behind on the way.

The lateral valley down which flows the torrent of the Aigue-Blanche has the honour of containing the highest *commune* in France, Saint Veran, which stands on a verdant southern slope 6,690ft. above the sea; and beyond this place the road continues upwards for a few miles in the form of a rough, boulder-strewn track to an old quarry from which the green marble was cut to make the tomb of Napoleon at Les Invalides in Paris. The whole ascent from the valley of the Guil is steep, almost as severe as the Col du Vars, and beyond the quarry a mountain track leads on to the little chapel of Cloisis, where, on the 16th of July, a pilgrimage is made by pious people both from the





(Left). The ancient market at Abries—Val Queyras.

(Right). Sheep cause a picturesque obstruction on the road up Mont Viso.

(Bottom). Looking down from the top of the road on the Sommet Bucher.

French and Italian sides of the frontier, which lies but a little way beyond this most lonely spot. I made the pilgrimage on June 4th, the A.J.S. taking me about half the way from St. Veran, until it was stopped by a stony bank with a gradient of about 1 in 2, where I left it and proceeded on foot. Up there by the little chapel was nothing but stillness, snow, and running water, with bright blue gentians starring the freshly uncovered turf. It stands in a ring of rugged peaks dominated by the Tête d'Etoiles (9,584ft.); there is not a house, not a tree in sight. The ordinary world, already somewhat remote at St. Veran, has now disappeared altogether. It is a good place for a pilgrimage.

There is one more excursion which must be made in the Val Queyras, for it is the best of all. On the southern side of the valley at Chateau Queyras stands a mountain called the Sommet Bucher (7,312ft.), up which has been constructed a military strategic road with quite reasonable gradients and a surface that is much better than that of the Col du Vars. The total rise, all through a great forest of larches, is about 2,900ft., and the road is 12 kilometres long, so that the average gradient works out at 1 in 13.9. The surface consists mostly of a smooth mat of pine needles, which by its softness throws extra work on the engine, but affords comfortable going. On a fine day the ride up this mountain is unique and unforgettable. There are glimpses all the way of an

expanding view of vast mountains fading into the distance, and, rising towards the summit, one catches up the spring until the trees are in their first tender green. From the top of the road, where a turning space is provided for cars, five minutes' walk takes one to the extreme summit, a grassy knob on which a little shelter has been built and from which there is a view in a complete circle of more than fifty Alpine peaks.

To climb a mountain like this, to be lifted easily to the top by a little motor bicycle, is a wonderful experience quite different from the ascent of a lofty *col*, where the view is always limited by the flanking mountains. One seems to be at the top of everything, and the valleys are so deep down below as scarcely to be visible. The world appears entirely as a scene of rugged peaks rising one behind the other indefinitely in every direction.

Each of the three excursions described in the Val Queyras can easily be made in a half-day without hurrying, but the mornings are usually preferable for clear views and cloudless skies.

The hour of departure and the attempt on the Col d'Izoard arrived. The distance to Briançon from Aiguilles by this pass is 43 kilometres, though a straight line drawn between the two places would probably not make more than half this length. It is a "concentrated *col*," making its distance in a comparatively small space, especially on the southern side. Passing the last village, Brunissard, in the beautiful valley of the Arvieux, they shouted to me that the *col* was very steep, a fact that I had guessed already. However, the general ascent proved to be no worse than the Col du Vars, and I acme to the famous scene near the top known as *la Casse Déserte* without any difficulty. Here the road drops slightly to pass round a vast amphitheatre formed by great screes thrown down from the heights of La Grande Rochebrune, the mountain to the right of this route. The place can hardly be described. It is different from anything to be seen elsewhere, either in pictures or in reality. The road here is at an elevation of some 7,500ft.; there is scarcely a vestige of vegetation and the air is so keen and clear that the shadows of towering needle-pointed rocks appear almost black.

Crossing a Snow Bank.

I passed some workmen on the road who looked as though they expected to see me back again. The last few bends were negotiated easily until, quite close to the top, I came upon the dreaded snow bank right across the road. There were only two of these on the extreme summit (7,900ft.), which I reached on foot in about five minutes. Just on the other side were two more workmen clearing the road. I said good morning, and what a pity it was having come so far that my little machine should be stopped just at the top. They at once offered to help me, and their sturdy pushing, backed up by heavily nailed boots, soon got the A.J.S. across the snow banks. I was somewhat generous, for the hotel bill at Aiguilles had been a pleasant surprise in its moderation. After that all was easy. I was indisputably the first tourist of the year to pass the Col d'Izoard, and I dropped down in triumph to the refuge Napoleon half a mile from the top by a short cut that was harder and drier than the main road, on which there was still much snow. This house at 7,700ft. I was told was open all the winter through. Chasseurs Alpins come there from Briançon for winter sports. The descent through great pine forests on the northern side is specially grand as regards the views looking back towards the summit.

Briançon, which was reached very comfortably in time for lunch, is the second highest town in France, and stands at an elevation of 4,350ft. There is the old town built up on the mountain side and a new industrial quarter in the valley of the Durance, the two being joined by a broad, straight road with a gradient of 1 in 7 for rather more than half a mile. It would be a fine venue for hill-climbs, but so far as I am aware none take place there. The old town is entered by draw-bridges and under ramparts, a form of protection somewhat out of fashion now, but which has served good purpose in old days as the inscriptions over the gateways signify. What pass for streets inside the walls are cobbled stairways with drains running down the middle, impracticable for wheeled vehicles. The view from the north-eastern ramparts is very beautiful. The town with its twin-towered cathedral lies far below one, and the eye penetrates into the distance up the valley of the Guisane towards the snowy mountains surrounding the passes of the Lauteret and the Grand Galibier, which were to be the crown and culmination of my journey.

A Beautiful Route.

The main road from Grenoble over the Col du Lauteret to Briançon passes on into Italy by the Col du Mont Génèvre, which is one of the best and most beautiful routes into that country. The eastern side of the Lauteret is nothing of a climb, the rise involved being 2,400ft. in 19 miles. The road is a fine piece of engineering with no sharp bends, and is protected at dangerous points by tunnels from avalanches and waterfalls. Although the Lauteret (6,750ft.) is less lofty than the other passes already described, it lies in the midst of very high mountains covered with everlasting snow; and it is, moreover, far more spacious than the other Alpine passes. There is not a vestige of vegetation save grassy slopes which in June carry such a wealth of flowers as can be seen nowhere else in Europe; and right up to the rugged summit of the Galibier, as soon as the snows melt, flowers bloom, wild anemones which grow larger the higher you get until you can scarcely believe your eyes, narcissus in incredible quantities, blue gentians, and wild pansies of many colours, together with innumerable rock plants.

There was much snow about the col this year on June 6th, the date of my arrival, and it could be seen at a glance that the Galibier, the road for which leaves the main Lauteret route about a mile before the summit on the eastern side, was impassable. The glorious peaks of La Meije (12,782ft.) were clear of cloud and dazzling in snow and sunshine. I installed myself at the Hotel des Glaciers in a little wooden room with a balcony and an outlook straight upon the glaciers and summits of this mountain, then took a run down the twelve kilometres of descent to La Grave to secure some more petrol for the morrow. There are two

A Week in the High Alps.—

long tunnels just above La Grave which are very damp, slithery, and unpleasant inside. They are lit with electric light, but dimly. I met a mule being led through one of them—mules hate motor bicycles—and the scene that ensued was pandemonium.

La Grave nestles right under la Meije, so that the principal view is at an angle of 60° above one. It has two quite good hotels, and is a fine centre for climbing and excursions on foot, but it lacks the glorious spaciousness of the Lauteret.

Unlike the Col d'Izoard, the Grand Galibier had no intention of yielding to an attack from an impertinent motor bicycle. I was far from the summit when very early the next morning I met the first snow bank, and, proceeding on foot, found that higher up the road was entirely covered and almost indistinguishable. Even on foot the ascent was by no means easy. I made footprints in the snow to be followed on the descent. Let all who read these notes and who ever reach the tunnel at the top of the Galibier not be content with just passing through and descending the other side, but take the footpath that leads up to the summit above the tunnel, where a *table d'orientation* has been placed at an altitude of 8,870ft. In any case it should be noted that the passage of the tunnel, which is fully half a mile long, requires care, and it is essential to light one's lamp.

The view from the *table d'orientation* could exhaust all the superlatives in the English language. The panorama sweeps from Mont Blanc to Mont Viso. All the giants of the Alps are there; to the south the summits of the Dauphiny Alps, the splendid Barre des Ecrins (13,457ft.), the highest mountain in France outside the Mont Blanc group, the peaks of Mont Pelvoux and La Meije, and the heights of the Belladonna range to the north. This view sweeps over 200 miles of dazzling snowy summits and glaciers, but the sky must be clear to see it all.

This was the culminating point of the journey. I descended, left the Col du Lauteret, passed through La Grave, ran swiftly and easily down the lovely valley of the Romanche towards Grenoble, which city was avoided by passing through Uriage-les-Bains and entering the Isère valley just above it; then proceeded through Chambéry to Aix-les-Bains, the journey's end.

The *Routes des Alpes* is completed by passing on from Aix-les-Bains to Annecy, and over the Col des Aravis to Chamonix and Mont Blanc. But this section, better known than that which I have tried to put before the reader, cannot be described in a few words, and requires a further article.

NOTE.—Eight kilometres equals 5 miles (approx.).

A point that is of special interest to those considering touring in the French Alps is the question of expense. My running expenses including hotels, all meals and tips, and everything spent on the machine, petrol, oil, and 9 francs for tyre repairs being the only items, but excluding such things as Kodak films and cigarettes, amounted to 332 francs, which for seven days is less than £1 a day.

BEFORE THE TOUR.

IN the instruction books issued by manufacturers one often encounters the statement that such and such a part is "packed with grease" at the works, and will require no further lubrication for a thousand miles or more. The private owner, messing about with an oilcan which is not easily stored when on tour, often wishes he could pack certain parts with grease. In actual fact, this is easily done, and such items as the wheel hubs, fork spindles, and steering head can be so thoroughly stored with lubricant at the start of a long holiday that they may safely be neglected for a month or more. The writer's method is to melt down a quantity of Price's hub lubricant on a stove until it is as fluid as water. It is then poured into an oilcan with a fine spout, and injected into the parts till it oozes out all round the bearings. It cools rapidly as it encounters the cold metal, and after a wipe over the parts can be left to do a full month's hard work without further attention.

The chains should be removed, cleansed in two successive baths of paraffin, and immersed in a final bath of melted lubricant, after which they can be neglected for 1,000 miles; no matter how dry they become externally, the bearing surfaces will be greasy. They should be carefully adjusted, the tension being verified for ¾in. up and down sag after the gear box and drawbolt nuts are all tight.

Both engine and gear box should be flushed out with paraffin and relubricated, four full charges to the engine, and the gear box according to its maker's directions.

All the nuts and screws should be gone over for tightness, as the loss of quite a tiny part may be a sad nuisance on tour. Loose nuts may be fitted with spring washers, or the boltheads burred over with a punch and hammer, or anointed with thick, ropy paint. Small plated items should be protected with vaseline or celluloid varnish (*e.g.*, "Corrosine"), as nobody wishes to waste time cleaning on a holiday.

See that the tyre repair outfit is fully stocked; and do not start on a long ride with any dubious tube or cover.

Camping with a Sidecar

An ideal way of spending a holiday, given fine weather, care in selecting pitches, and the right sort of tent.

Making the Most of the Precious Summer Days. Hints on Equipment.

IT is difficult to imagine two pastimes that pair better than motor cycling and light-weight camping. The power of the motor cycle scorns the slight additional weight, and its speed brings the distant camp site within easy reach. Frequently, in the case of sidecar outfits at least, part of the equipment, in the shape of cushions, rugs, and picnic basket, is already carried. All that is necessary to render the motor cycle a complete and self-containing touring equipment is a tent and a down sleeping bag, weighing together only a few pounds. The modern light-weight tent is a cosy and comfortable sleeping apartment, about as far removed from the clumsy primitive canvas type as the modern motor-cycle is from its early ancestors. Pitched under right conditions it is dry and safe in any weather. A light-weight camp outfit enlarges at once the freedom of the motor cyclist to an extent it is difficult to estimate except through actual experience.

Why Barter Your Freedom?

Imagine for a moment the conditions under which camping is enjoyed. Thousands of touring motor cyclists this summer will find themselves at the end of a long day's ride sitting on a bank of heather, with the lake below reflecting the sunset lights and all around the towering mountains. Who would want to leave such ideal surroundings at the call of the necessity of finding accommodation for the night? With a light-weight tent, the tourist would be able to enjoy the long evening, and those silent hours when, in the open, something vastly interesting and arresting is happening every moment. This is no matter of mere economy; the question is whether we do not barter too valuable a portion of our leisure on a holiday when we shut ourselves away from that beauty of Nature which we came out to see.

No smelling oil lamps need be used if accumulators are carried in the sidecar. The illustration shows the wiring from the machine to the tent.

It requires little exercise of the imagination to picture the possibilities of the light-weight tent for week-ends. Every Saturday evening during the summer thousands of motor cyclists rush away from choice scenes back to town conditions. A light-weight camp outfit would enable them to spend the whole week-end by the river, or on some upland farm. Many, of course, have already discovered the healthy joy of "week-ending" with a light-weight tent, and their numbers are ever growing.

"TWO IN THE SHADE."

Of the two camping outfits shown that on the left is the motor cycle size and of a pattern known as the "Two in the Shade." Its ground sheet is made of oiled canvas and is part and parcel of the tent. Anyone can erect the tent in one minute and can pack it in one and a half minutes. It will hold three comfortably and is provided with a ventilated hood. The cost is 5 gns. The larger tent is intended for cycle cars and big sidecar outfits, and, of course, provides more accommodation. These are the productions of the T.O.M. Syndicate, 6, Princes Street, Hanover Square, London, W.1, which shortly hopes to institute an information bureau on camping.

Certain practical considerations will at once arise in the minds of motor cyclists who have not so far had experience of light-weight camping or camp touring: questions of selection of equipment, method of packing on the machine, choice of sites and suitable touring districts. The general equipment is now familiar to the majority of motor cyclists, and I need only mention here a word of warning. There are tents labelled and listed as "light-weight," and light-weight tents. Members of the A.C.U. will notice in the handbook this year a section on light-weight camping, and the A.C.U. will give them advice as to sources of supply. I have no doubt that the A.A. will do the same for its members. There is no need to waste money on heavy equipment which will afterwards be discarded as useless, while there are books dealing specially with light-weight camping.

Carrying the Outfit.
